CONSTRUCTION DISCHARGE AND NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) REQUIREMENTS
Public Works Technical Bulletins are published by the U.S. Army Corps of Engineers, 441 G Street, NW, Washington, DC 20314-1000. They are intended to provide information on specific topics in areas of Facilities Engineering and Public Works. They are not intended to establish new DA policy.
CONSTRUCTION DISCHARGE AND NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) REQUIREMENTS

1. **Purpose.** This Public Works Technical Bulletin (PWTB) identifies current compliance requirements and supporting information for stormwater runoff from construction activities and related NPDES requirements. Stormwater runoff control from construction activities is required under the NPDES and the Clean Water Act for all states. This PWTB identifies the applicable regulations for each state, lists requirements for the Construction General Permit, and shares how individual USACE Districts respond to these requirements.

2. **Applicability.** This PWTB applies to all U.S. Army facilities and USACE Districts performing construction engineering activities in the United States.

3. **References.**

   b. Federal National Pollutant Discharge Elimination System (NPDES) Construction General Permit (CGP) for Discharges for Large and Small Construction Activities (effective 1 July 2003 and expires 1 July 2008).
4. Discussion.

a. AR 200-1 requires all Army installations and activities to comply with the Clean Water Act and NPDES regulations in addition to other applicable regulations and legislation. Construction activity occurs at all military installations in the continental United States, Alaska, and Hawaii. Corps of Engineers military and civil works Districts and Divisions oversee countless construction projects throughout the nation on military installations, the nation’s waterways, and recreation areas, as well as a massive support program to Federal, state, regional, and municipal entities. NPDES requirements include notification of intent to get a permit and development of Storm Water Pollution Prevention Plans (SWPPPs) — acceptable to states and other regulatory agencies for each construction action — to mitigate impact from stormwater runoff. Stormwater runoff from construction activities can significantly affect water quality. Runoff crossing and emanating from construction sites can pick up pollutants such as sediment, debris, and a variety of toxic and nontoxic chemicals (e.g., fuels, paints, roofing materials, metals, et al.). The impact on receiving waters can include sedimentation, which destroys aquatic habitat and may contribute to changes in aquatic floral and faunal composition. Polluted stormwater runoff can harm or kill fish and other aquatic life. Additionally, high volumes of runoff can cause stream bank erosion.

b. Operators of regulated construction sites must develop and implement SWPPPs and obtain appropriate permit coverage from states with primacy or from the U.S. Environmental Protection Agency (EPA) in non-primacy states. Appendix A gives details for each state regarding permits and other requirements.

c. Appendix B describes the Federal NPDES CGP for discharge from large and small activities.

d. Appendix C summarizes regulations and other guidance that Corps Districts use for stormwater from construction sites. This information was obtained by calling points of contact at the District Offices. The regulations apply to construction projects conducted by individual installations as well. Individual states should be contacted to confirm appropriate regulation requirements.
5. Points of Contact. HQUSACE is the proponent for this document. The POC at HQUSACE is Malcolm E. McLeod, CEMP-II, 202-761-0632, or e-mail: malcolm.e.mcleod@usace.army.mil.

Questions and/or comments regarding this subject should be directed to the technical POC:

Directorate of Civil Works
Appendix A: State Stormwater Regulations for Construction Sites

Introduction

Water pollution degrades surface waters making them unsafe for drinking, fishing, swimming, and other activities. As authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States.

Stormwater runoff from construction activities can significantly affect water quality. As stormwater flows over a construction site, it picks up pollutants such as sediment, debris, and chemicals. Polluted stormwater runoff can harm or kill fish and other wildlife. Sedimentation can destroy aquatic habitat, and high volumes of runoff can cause stream bank erosion. Phase II of the NPDES regulations, which went into effect 10 March 2003, extended coverage to 1- to 5-acre construction sites, including smaller sites that are part of a larger common plan of development or sale. Operators of construction sites 1 acre or larger are now required to obtain authorization to discharge stormwater under an NPDES construction stormwater permit. This new requirement affects approximately 200,000 construction sites annually. Construction activities that result in a land disturbance of less than 1 acre may require a NPDES permit based on the potential for contribution to a violation of a water quality standard or for significant contribution of pollutants as designated by the NPDES permitting authority or the U.S. Environmental Protection Agency (USEPA) Regional Administrator.

The definitions of construction and construction-related activities refer to the actual earth-disturbing construction and those activities supporting the construction project such as construction materials or equipment storage or maintenance (e.g., fill piles, borrow area, concrete truck washout, fueling), and measures used to control the quality for stormwater directly related to construction. A fact sheet available from the USEPA (http://cfpub2.epa.gov/npdes/stormwater/cgpfaqs.cfm) may help determine whether noncontiguous work areas should be treated separately (i.e., a half-acre worksite is one-quarter mile from a half-acre staging area). If questions exist for specific states that have primacy, the state or local responsible entity should be contacted.
Operators of regulated construction sites are required to develop and implement stormwater pollution prevention plans and to obtain permit coverage from an authorized state or from USEPA (in non-authorized states). In most cases, the NPDES permit program is administered by authorized states. In addition to the authorized states and USEPA, approximately 6,000 municipalities with separate storm sewer systems are required by NPDES regulations to develop programs to regulate stormwater from construction sites within their jurisdiction that are 1 acre or larger. The state or municipality may add more stringent conditions that apply only in their specific area.

USEPA is the permitting authority for the following: Alaska, District of Columbia, Idaho, Massachusetts, New Hampshire, and New Mexico.

All of the other states serve as NPDES permitting authorities with the following exceptions:

- In Delaware, Colorado, Vermont, and Washington, USEPA is the permitting authority for Federal facilities.
- USEPA has authority in Oklahoma for discharges associated with oil and gas exploration, drilling, operation, and pipelines; also, point source discharges associated with agricultural production, services, and silviculture.
- USEPA has authority in Texas for discharges associated with the activities of exploration, development, and production of oil or gas or geothermal resources, including transportation of crude oil or natural gas by pipeline.
- USEPA has authority over most of the Indian Countries.

Construction sites can be regulated through either general or individual permits. General permits cover a group of similar dischargers under one permit, which simplifies the application process for the industry, provides uniform requirements across the sites, and reduces administrative workload for the permit authorities. To be covered, the developer, builder, or contractor for the construction project submits a Notice of Intent (NOI) to the permit authority. By submitting the NOI, the permittee agrees to the conditions in the published permit. An individual permit allows a specific industrial activity. As a specific operation, further discussion will not be included here.
A potential waiver from the requirements exists when the operator certifies either of the following for stormwater discharges associated with a small construction activity:

- The rainfall erosivity factor is less than 5. Erosivity is the term used to describe the potential for rain to wash off disturbed, devegetated earth into waterways during storms. Potential for erosion is determined by a variety of factors: soil type, site geology, amount and force of precipitation during the time the earth is exposed, freeze-thaw cycles, snow pack, and other factors. A method developed by the U.S. Department of Agriculture determines annual erosivity factors for the continental United States. Supporting information and instructions for calculating erosivity factors are found in: http://www.epa.gov/npdes/pubs/fact3-1.pdf.

- The activity will occur within an area where controls are not needed based on a total maximum daily load (TMDL) or an equivalent analysis for the pollutant(s) of concern is produced for non-impaired waters that do not require a TMDL.

Every NPDES authority addresses the contaminated stormwater runoff from construction sites by implementing the following requirements:

- Stormwater Pollution Prevention Plans - Site managers are required to prepare a stormwater pollution prevention plan, erosion and sediment control plan, or an equivalent document.

- Inspections by Construction Site Operator - Construction site operators are required to inspect their sites on a regular basis.

- Erosion and Sediment Control - Site managers are required to implement a combination of erosion and sediment controls to prevent soil erosion and to manage construction site runoff. Currently, states base their technical requirements for basins or other erosion control techniques on local rainfall patterns and other considerations.

- Stabilization of Soils after Construction - Stabilization of soils are required after construction activities have temporarily or permanently ceased. The time required for this to be accomplished varies based on local conditions.

Construction projects that disturb 1 or more acres are subject to three major requirements:
• Submit a permit application (or NOI) prior to the start of construction.

• Develop, submit, and fully implement an erosion and sediment control plan that is approved prior to initiating any on-site activities. This plan specifies the measures that will be put in place to prevent and/or control erosion and sediment run-off.

• Submit a Notice of Termination (NOT) when the following criteria have been met: final stabilization of the site has been achieved as defined in the permit, all temporary erosion and sediment controls have been removed, and no potential remains for construction-related sediment discharge to surface waters.

Conversion Factors

Non-SI* units of measurement used in this report can be converted to SI units as follows:

<table>
<thead>
<tr>
<th>Multiply</th>
<th>By</th>
<th>To Obtain</th>
</tr>
</thead>
<tbody>
<tr>
<td>acres</td>
<td>0.40469</td>
<td>hectares</td>
</tr>
<tr>
<td>square feet</td>
<td>0.09290304</td>
<td>square meters</td>
</tr>
</tbody>
</table>

In the remainder of this appendix, the following information regarding stormwater runoff from construction sites is listed for each individual state: Permitting authority, registration requirements, inspection requirements, permit application forms and instructions, specific regulations applicable to that State, points of contact, and additional stormwater resources.

*Système International d’Unités ("International System of Measurement"), commonly known as the "metric system."
ALABAMA

Permitting Authority

Alabama is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country. The Alabama Department of Environmental Management (ADEM) is responsible for stormwater management in the State of Alabama. To discharge storm water from construction disturbances and associated land disturbance activities, the construction site operator/owner must apply for NPDES coverage through the ADEM. “Associated areas” within the Alabama stormwater rules are defined as “other onsite or adjacent support activities, including but not limited, to construction site temporary office space, parking areas, employee work areas, material stockpiles, waste or material storage, disposal, equipment storage, chemical/fuel storage and staging areas.”

For regulated discharges within Indian Country, USEPA is the NPDES permitting authority. Indian Country construction activities in Alabama must use the USEPA Region 4 General Construction Permit, which can be found at http://www.epa.gov/npdes/pubs/cgp-reg4.pdf.

Registration Requirements

Registration neither precludes nor negates an operator’s responsibility or liability to apply for, obtain, or comply with other ADEM, Federal, state, or local government permits, certifications, licenses, or other approvals. Registration does not authorize disturbance activity for sites/projects in the Coastal Zone of Baldwin and Mobile counties until coastal consistency certification or permit coverage is obtained, if required by ADEM.

Permit Requirements

Registration for NPDES permit coverage in Alabama establishes requirements, including but not limited to, Best Management Practices (BMPs), Construction Best Management Practices Plans (CBMPPs), registration requirements, technical standards and guidelines, operational requirements, stormwater storage, transport, treatment, and discharge management requirements for construction activities, noncoal mining sites less than 5 acres in size, and areas associated with these activities. The Alabama stormwater regulations require that the CBMPP must be prepared by a qualified credentialed professional (QCP). The CBMPP must be designed to minimize pollutant discharges in
stormwater runoff to the maximum extent practicable during land disturbance activities, be fully implemented and effectively maintained. The CBMPP must be submitted with the request for registration for proposed discharges to a Tier 1 waterbody(s), proposed discharges to an Outstanding National Resource Water (ONRW)-designated waterbody, and for projects involving waterbody relocation or significant alteration.

The registrant, owner, operator, contractor, or other responsible entity, separately or collectively, must retain NPDES registration coverage for regulated projects until existing disturbance activity and future proposed disturbance activity is complete and all disturbed areas have been reclaimed and/or effective stormwater quality remediation has been achieved. Responsibility for compliance with ADEM rules and NPDES registration requirements are not delegable by contract or otherwise. The operator/owner must ensure that any agent, contractor, subcontractor, or other person employed by, under contract, or paid a salary by the operator/owner ensures compliance.

**Inspection Requirements**

The Alabama stormwater rules require that regular inspections must be performed by a QCP, a trained person under the direct supervision of a QCP, or a Qualified Credentialed Inspector (QCI) trained through the Qualified Credentialed Inspection Program (QCIP).

ALASKA

Permitting Authority

Alaska does not have NPDES stormwater permitting authority from the Federal Government. The USEPA is the stormwater permitting authority for construction activities. To discharge storm water from large and small construction activities, the construction operator must apply for coverage under the Federal NPDES General Permit for Storm Water Discharges from Construction Activities (also known as the Construction General Permit, or CGP). The operator must file such application with USEPA Region 10, prior to commencement of construction activities. The Permit number is AKR100000.

Permit Requirements

The Alaska Department of Conservation, Division of Water does have a Non-point Source Water Pollution Control Program to prevent stormwater pollution of water bodies. After developing the Storm Water Pollution Prevention Plan (SWPPP) as required by the Federal CGP, the construction operator must provide copies of its NOI application and SWPPP to the Alaska Department of Environmental Conservation (DEC) for review and approval. Additionally, the construction operator must revise its SWPPP whenever necessary to reflect current conditions on site. After construction is completed, the construction operator must submit an NOT to USEPA and a copy of the NOT to the Alaska DEC.

ARIZONA

Permitting Authority

Arizona is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country. The Arizona Pollutant Discharge Elimination System (AZPDES) CGP, AZG2003-001, authorizes stormwater discharges from large and small construction-related activities where those discharges have a potential to enter surface waters of the United States or a storm drain system.

For regulated stormwater discharges within Indian Country, USEPA is the NPDES permitting authority. Indian Country construction activities in Arizona must use the USEPA Region 9 CGP, found at http://www.epa.gov/region09/water/npdes/stormwater.html.

Permit Requirements

To obtain authorization for discharges of stormwater associated with construction activity, the operator must comply with all the requirements of the CGP and submit an NOI. The operator of a construction site is responsible for obtaining coverage under an AZPDES permit. The operator could be the owner, the developer, the general contractor, or an individual contractor.

The operator must also develop and implement an SWPPP that satisfies the conditions of the permit. If the construction site is within 1/4 mile of unique or impaired water, the SWPPP must be submitted with the NOI. In all cases, the SWPPP must be available for Arizona Department of Environmental Quality (ADEQ) review. Once the SWPPP is prepared and a complete and accurate NOI is received by ADEQ, the operator must wait at least 2 business days before discharging. If ADEQ does not contact the operator within the waiting period, the operator may assume permit coverage has been granted. Whether or not ADEQ notifies the operator of a deficiency in the NOI, discharges are not authorized under this permit if the operator submits an incomplete or incorrect NOI.

When responsibility for operational control of a construction site is shared, all operators must apply for permit coverage and submit an SWPPP. Thus, a single construction site may have a
number of operators who may operate under a common or separate SWPPP.

The AZPDES authorizing statute uses the term navigable waters, which is defined as equivalent to the waters of the United States. However, because the term navigable waters can be confusing to the general public (i.e., the definition of navigable waters also includes ephemeral washes, intermittent streams, playas, and wetlands, which conventional vessels may not be able to travel), this permit generally references discharges to waters of the United States.

The CGP expands coverage from the 1998 construction general permit that provided coverage for stormwater associated with large construction activities to include both small and large construction.

Large construction activity refers to the disturbance of 5 or more acres. It also refers to the disturbance of less than 5 acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb 5 acres or more (see 40 CFR 122.26(b)(14)(x)).

Small construction activity refers to the disturbance of at least 1 but less than 5 acres of land. It also refers to the disturbance of less than 1 acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb at least 1 but less than 5 acres (see 40 CFR 122.26(b)(15)).

**Permit Application Forms and Instructions for Indian Lands within Arizona**

For the Indian Lands where USEPA Region 9 is the permitting authority, one general permit has been issued for construction sites disturbing 1 or more acres. This permit is called the NPDES General Permit for Storm Water Discharges from Construction Activities and also known as the USEPA CGP. A copy of the CGP is available at: http://www.epa.gov/npdes/pubs/cgp2003_entirepermit.pdf. To apply for permit coverage under the CGP, a Construction NOI must be submitted to USEPA. The NOI form can be found at: http://cfpub1.epa.gov/npdes/stormwater/application_coverage.cfm.

ARKANSAS

Permitting Authority

Arkansas is the NPDES stormwater permitting authority for all regulated stormwater discharges. The Arkansas Department of Environmental Quality (ADEQ) has the responsibility to manage stormwater in the state of Arkansas. Owners or operators of facilities discharging storm water associated with construction activity located in the state of Arkansas must seek permit coverage under ADEQ General Storm Water Permit for Construction Activities (ARR150000). This permit requires permit coverage for all construction sites that disturb an area greater than 1 acre.

Permit Requirements

The Arkansas General Storm Water Permit ARR150000 classifies construction sites as small, medium, or large. The site status must be determined in order to apply the permit requirements.

Large construction sites are defined as any construction activity that meets one of the following two definitions:

1. Construction sites that will result in the disturbance of 10 or more acres of total land area or less than 10 acres of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb 10 acres, located in specific counties.

2. Construction sites that will result in the disturbance of 20 or more acres of total land area or less than 20 acres of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb 20 acres or more located in specific counties.
Medium construction sites are defined as any construction activity that meets one of the following two definitions:

1. Construction sites that will result in the disturbance of greater than 5 acres and less than 10 acres of total land area or less than 5 acres of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb 5 acres or more, but less than 10 acres, located in specific counties.

2. Construction sites that will result in the disturbance of greater than 5 acres and less than 20 acres of total land area or less than 5 acres of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb 5 acres or more, but less than 20 acres, located in specific counties.

Small construction sites are defined as any construction activity that will result in the disturbance of greater than or equal to 1 acre and less than 5 acres of total land area or less than 1 acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb one 1 acre or more, but less than 5 acres.

For medium or large construction sites, the General Storm Water Permit ARR150000 requires submittal of the NOI 2 weeks prior to commencement of construction. An owner or operator of a small construction site is automatically authorized to discharge storm water related to construction activities under this general permit. Submittal of an NOI for small construction sites is not required for coverage under this general permit.

For large construction sites, the SWPPP must be completed and submitted for review along with an NOI to be covered under this permit and updated as appropriate. Submittals of updates to the plan during the construction process are required only if requested by the Director of ADEQ. For medium construction sites, the SWPPP must be completed prior to the submittal of an NOI to be covered under this permit and updated as appropriate. Owners/operators of small construction sites must complete an SWPPP prior to the commencement of construction activities and update as appropriate.

CALIFORNIA

Permitting Authority

California is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country; on Tribal Lands, USEPA Region 9 is the NPDES permitting authority. Indian Country construction activities must apply for coverage under the USEPA CGP for California. The statewide permit is called the General Construction Storm Water Permit. Two California Regional Water Quality Control Boards (RWQCBs) have adopted their own permit to cover discharges from construction activity greater than 5 acres in specific watersheds (South Lake Tahoe hydrologic unit and the San Jacinto). These owners must apply for Regional Board permits.

The General Permit does not apply to storm water discharges from construction sites less than 1 acre (unless part of a larger common plan of development or sale), projects covered by an individual NPDES Permit for stormwater discharges associated with construction activity, or landfill construction subject to the general industrial permit. Small Linear Underground/Overhead Projects disturbing at least 1 acre but less than 5 acres (including trenching and staging areas) are covered by a separate permit. Linear projects disturbing 5 or more acres must obtain coverage under the CGP.

Permit Requirements

To discharge storm water from a construction site, all construction projects disturbing 1 acre or more of land must have either an individual storm water permit, a statewide CGP, or, if applicable, a Regional Board permit. To apply for
coverage under the General Permit, the owner/operator must file an NOI with the State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency, prior to commencement of construction activities. The General Permit requires the development and implementation of an SWPPP, in order to receive and maintain permit coverage.

Owners of an ongoing construction site covered under the previous CGP (WQ Order No. 92-08-DWQ) must continue to implement their existing SWPPP and monitoring program.

The CGP requires sampling and analysis at many construction sites. When required, the sampling and analysis plan and data must be kept with the project’s SWPPP. The sampling and analysis requirements supplement, but do not replace, the visual monitoring program required by the CGP. All construction projects must continue a visual monitoring program including inspections before predicted rain events, during extended rain events, and following rain events that produce runoff.

The Small LUP General Permit has varying application and permitting requirements based on the type and complexity of the project. The owner/operator of Tier I and Tier II Small LUPs must seek coverage under the Small LUP General Permit prior to the start of construction by filing the appropriate notices with the SWRCB and the appropriate RWQCB. The Small LUP General Permit requires the development and implementation of a SWPPP for each construction project, including monitoring requirements.

Additional Stormwater Compliance Resources – USEPA

USEPA Region 9 NPDES:

COLORADO

Permitting Authority

Colorado is the NPDES Permitting Authority for all regulated stormwater discharges except for Federal facilities and those within Indian Country. The stormwater management program is under the Colorado Department of Public Health & Environment, Water Quality Control Division. The Colorado program is referred to as the Colorado Discharge Permit System, or CDPS.

For regulated stormwater discharges on Federal facilities and within Indian Country, USEPA Region 8 is the NPDES permitting authority. Construction activities at Federal facilities are defined as those activities where the work is located on land owned by a Federal agency/department and the work is designed and paid for by a Federal agency/department. Construction activities on Federal facilities or within Indian Lands in
Colorado must use the USEPA CGP. For more information, visit Region 8’s stormwater program web site (listed under Additional Stormwater Compliance Resources).

**Permit Requirements**

A permit to discharge regulated storm water from any construction activity that disturbs at least 1 acre of land (or is part of a larger common plan of development or sale that will disturb at least 1 acre) is required.

If the total area of disturbance, including disturbances from the entire common plan of development or sale, is greater than or equal to 5 acres, the site is considered to be a Large Construction Site. If it is at least 1 acre but less than 5 acres, the site is considered to be a Small Construction Site. The permit requirements are the same regardless of whether the site is a Small or Large Construction Site.

Large Construction Sites have been under a requirement to obtain coverage under the Stormwater General Permit for Construction Activities since 1992 (Phase I of the NPDES Stormwater Program). This requirement has not changed in Phase II. The owner or operator must apply for coverage under the CDPS General Stormwater Permit at least 10 days prior to the start of construction activities with a certification that the Stormwater Management Plan (SWMP) is complete.

To be in compliance with the stormwater regulations, the owner or operator of a Small Construction Site must do one of the following three options, whichever is applicable:

1. Obtain coverage under the Stormwater General Permit for Construction Activities at least 10 days prior to the start of construction activities. An SWMP must be completed prior to application.

2. Obtain coverage under a State-designated Qualifying Local Program. The Water Quality Control Division designates a local municipality’s stormwater quality control program as a Qualifying Local Program. This means that the local program’s requirements are at least as stringent as the State regulations.

3. Apply for coverage under the R-Factor Waiver. The R-Factor Waiver allows a site owner or operator to apply for a waiver from State permit requirements during a period when the R-Factor, as calculated using the State approved method, is less than 5. The R-Factor is a way to measure erosion potential
based on the length of the project and time of year. In general, the only projects that will qualify for the waiver are projects that are completely stabilized within a month or two of the start of construction. That means that projects relying on seeding for revegetation will usually not qualify for the waiver, because the vegetation must be established before the site is considered stabilized. During the spring and summer months, when Colorado experiences the bulk of its rainfall, many projects will not qualify at all for the waiver. In addition, the Division will not grant waivers for construction sites located in areas where snow cover exists at, or up gradient of, the site for extended periods of time, if the construction site will potentially remain active and unstabilized during spring runoff. This waiver does not relieve the operator or owner from complying with the requirements of local agencies, such as meeting local stormwater quality requirements, including those required by a Qualifying Local Program.

Construction operations must implement the provisions of the SWMP as a condition of the permit.

Storm Water Requirements for Construction:

CONNECTICUT

Permitting Authority

Connecticut is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian
Country. For Indian Country, USEPA Region 1 is the NPDES permitting authority. Indian Country construction activities in Connecticut must use the USEPA CGP ( Permit Number: CTR10000I).

Registration Requirements

Registration must be submitted for construction stormwater discharges to be authorized by Connecticut’s General Permit for the Discharge of Stormwater and Dewatering Wastewaters from Construction Activities. The registration form must be submitted to the Commissioner, Connecticut Department of Environmental Protection (DEP), at least 30 days before the initiation of construction activities.

If a site has been previously registered under the General Permit renewed on 1 October 1997, modified on 20 December 2000, and renewed on 1 October 2002, the permittee does not need to submit a new registration under this general permit, unless the ownership of the site has been transferred. The registrant is responsible for compliance with all conditions of the general permit.

Permit Requirements

The General Permit for the Discharge of Stormwater and Dewatering Wastewaters from Construction Activities, DEP-PERD-GP-015, applies to all discharges of stormwater and dewatering wastewaters from construction activities that result in the disturbance of 5 or more acres of total land area on a site.

For small construction projects (a total disturbed area (regardless of phasing) of between 1 and 5 acres), the owner/operator must adhere to the erosion and sediment control land use regulations of the town in which the construction activity is conducted. No registration pursuant to the general permit is required for such construction activity as long as the owner/operator receives town review and written approval of its erosion and sediment control measures and follows the Guidelines. If no review is conducted by the town, the owner/operator must register and comply with the requirements of the general permit.

For construction activities that result in the disturbance of 10 or more total acres of land (regardless of phasing), a Stormwater Pollution Control Plan must be submitted to the commissioner no later than 30 days before the initiation of construction activities. Plans must be submitted in conjunction with the registration form.
Once the construction activity begins, the permittee must implement the Stormwater Pollution Control Plan and maintain compliance with the Plan. The Plan must address two components of stormwater pollution: (1) pollution caused by soil erosion and sedimentation during and after construction; and (2) stormwater pollution caused by use of the site after construction is completed, including, but not limited to, parking lots, roadways, and the maintenance of grassed areas.

At the completion of a construction project, an NOT must be filed with the commissioner. A project is considered complete after the site has been stabilized for at least 3 months following the cessation of construction activities. A site is not considered stabilized until there is no active erosion or sedimentation present and no disturbed areas remain exposed.

**Construction General Permit**

General Permit for the Discharge of Stormwater and Dewatering Wastewaters Associated with Construction Activities: [http://dep.state.ct.us/pao/download/watrdown/Const_GP.pdf](http://dep.state.ct.us/pao/download/watrdown/Const_GP.pdf)

**Permit Application Forms and Instructions**

**Permit Application Forms and Instructions for Indian Lands within Connecticut**

For the Indian Lands where USEPA Region 1 is the permitting authority, one general permit has been issued for construction sites disturbing 1 or more acres. This permit is called the NPDES General Permit for Storm Water Discharges from Construction Activities and also known as the USEPA CGP. A copy
of the CGP is available at: http://www.epa.gov/npdes/pubs/cgp2003_entirepermit.pdf. To apply for permit coverage under the CGP, a Construction NOI must be submitted to USEPA. The NOI form can be found at: http://cfpub1.epa.gov/npdes/stormwater/application_coverage.cfm.

DELAWARE

Permitting Authority

Delaware is the NPDES stormwater permitting authority for all regulated stormwater discharges except for Federal facilities. Federal facilities in the State of Delaware must apply for coverage under the USEPA CGP. The Delaware Department of Natural Resources and Environmental Control (DNREC) administers the General NPDES Storm Water Permit Program. An owner/operator of a “land disturbing activity” is required to file with the Department a NOI to obtain permit coverage. An approved sediment and stormwater plan becomes the regulatory document under which the owner/operator operates to be in compliance with the Delaware Sediment & Stormwater Regulations.

DNREC has delegated various components of the General NPDES Permit Program to local conservation districts and jurisdictions: sediment control and stormwater management plan approval; inspection during construction; post-construction inspection of permanent stormwater facilities, and education and training. This practice has created a partnership between State and local program implementers with the State providing technical expertise and training while conservation districts and local governments provide program implementation. In addition to submitting a sediment and stormwater management plan to the appropriate plan approval authority, an owner/operator of a construction site may then need to obtain a local permit, such as a grading or building permit.

Permit Requirements

An owner/operator of a construction site must submit an NOI form for Storm Water Discharges Associated With Construction Activity under a NPDES General Permit to the Delaware DNREC. Additionally, land may not be disturbed without an approved sediment and stormwater management plan. Sediment and stormwater management plans remain valid for 3 years from the date of an approval, unless specifically extended or renewed by the appropriate plan approval agency. The sediment and stormwater management plan review and approval criteria are contained in the Delaware Sediment and Stormwater Regulations.

A Prior Notification requirement exists under the General NPDES Permit Program. Construction projects that receive approval of a Sediment and Stormwater Management Plan must notify the appropriate delegated local agency 5 working days before construction begins, regardless of the size or scope of the
approved project. Failure to notify the appropriate authority prior to construction constitutes a violation of the approved plan.

As of 1 July 2004, unless waived, State and Federal construction projects under the review of the DNREC require a Certified Construction Reviewer (CCR) to perform inspection duties. The CCR must be certified by the DNREC. The CCR must review and report on all erosion and sediment controls as well as stormwater management facility construction throughout the duration of the project. Reports must be prepared by the CCR on a weekly basis.

DISTRICT of COLUMBIA

Permitting Authority

The District of Columbia (D.C.) does not have NPDES stormwater permitting authority from the Federal Government. The stormwater permitting authority for construction activities is the USEPA. To discharge storm water from large and small construction activities, the construction operator must apply for coverage under the Federal NPDES General Permit for Storm Water Discharges from Construction Activities. The operator must file such application with USEPA Region 3, prior to commencement of the construction activities. In addition, a construction site owner/operator must also be in compliance with local storm water regulations. No person may engage in any land disturbing activity on any property within the District until that person has secured a construction permit from the District.

All plans along with permit applications and other related documents (if required) must be submitted to the “One Stop Permit and Business Center” operated by the District of Columbia Department of Consumer and Regulatory Affairs (DCRA). In addition, local D.C. regulations that govern stormwater management and erosion and sediment control can be found in Chapter 5 of Title 21, and Chapter 31 of Title 20, District of Columbia Municipal Regulations (DCMRs).

Permit Requirements

To apply for coverage under the Federal CGP, submit an NOI form to the USEPA at least 7 days before construction starts. The
Watershed Protection Division of the D.C. Department of Health is assigned the mission of managing land disturbing activities to prevent accelerated soil erosion and sediment deposition in the Potomac and Anacostia Rivers and their tributaries. Two branches of the Watershed Protection Division support implementation of the local stormwater management and sediment and erosion control program: the Sediment and Storm Water Technical Services Branch and the Inspection and Enforcement Branch.

The Sediment and Storm Water Technical Services Branch reviews construction and grading plans and coordinates the permit review process with DCRA. This Branch also develops and upgrades the stormwater management and erosion and sediment control regulations. The Inspection and Enforcement Branch conducts inspections of soil erosion and sediment control and stormwater management facilities at construction sites for compliance with the regulations.

After obtaining the appropriate permit(s) from the DCRA, the owner/contractor of a construction site is required to call the Inspection and Enforcement Branch at least 24 hours before the start of excavation or grading to schedule a pre-construction meeting or an initial site inspection. Approval of a construction permit is based upon the submission by the permit applicant of an erosion and sediment control plan, or a stormwater management plan, or both, depending on the nature of the development activity. An erosion and sediment control plan is required for 50 square feet of land disturbance. A stormwater management plan is required for 5,000 square feet of land disturbance.

Florida

Permitting Authority

Florida is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country. For Indian Country, USEPA is the NPDES permitting authority and construction activities in USEPA Region 4 must use the Region 4 CGP.

The owner/operator of a construction site in Florida must obtain a Generic Permit for Stormwater Discharge from Large and Small Construction Activities (CGP). Only projects that will ultimately disturb 1 or more acres of land are required to have permit coverage. If a project is less than 1 acre, but part of a larger common plan of development or sale, that will ultimately disturb 1 or more acres, then permit coverage is required.

The NPDES stormwater permitting program is separate from the State's stormwater/environmental resource permitting program and local stormwater/water quality programs, which have their own regulations and permitting requirements. A construction owner/operator may be required to obtain other stormwater-related permits to be in compliance with Florida’s stormwater regulations.
Environmental Resource Permitting (ERP) is required under Part IV, Management and Storage of Surface Waters, Chapter 373, Water Resources, of the Florida Statutes. The ERP program regulates activities involving the alteration of surface water flows, which includes new upland activities that generate stormwater runoff from upland construction, also dredging and filling in wetlands and other surface waters. ERP applications are processed by either the Department of Environmental Protection (DEP) or one of the state's water management districts.

Additionally, under Chapter 62-25, Regulations of Stormwater Discharge, of the Florida Administrative Code, persons constructing a stormwater discharge facility or planning to discharge stormwater into a stormwater discharge facility must obtain a stormwater discharge permit.

**Permit Requirements**

An NOI form for small and large construction projects for permit coverage under the Florida CGP must be submitted to the NPDES Stormwater Notices Center. The NOI must be filed at least 2 days prior to commencement of construction. Authorization is granted 48 hours after the date the complete NOI is postmarked to DEP. A construction site owner/operator must re-apply for coverage every 5 years (if construction activity exceeds 5 years).

The CGP requires the permittee to develop and implement an SWPPP. The SWPPP does not have to be submitted with the NOI but a current copy must be kept on the construction site or at an alternative location as specified in the NOI.

An NOT form must be submitted to DEP to discontinue permit coverage. An NOT may be submitted only when the site meets the eligibility requirements for termination specified in the CGP.

GEORGIA

Permitting Authority

The State of Georgia is the NPDES stormwater permitting authority for all regulated stormwater discharges. The Georgia Environmental Protection Division (EPD) has proposed to issue three NPDES general permits that will authorize the discharge of storm water from three distinct types of construction activity. These permits became effective 13 August 2003, and regulate all construction activity disturbing 1 or more acres. One permit regulates stand-alone construction activity; the second regulates infrastructure (i.e., linear) construction sites; the third regulates common development construction.

The three types of construction stormwater permittees are: Primary, Secondary, and Tertiary. Primary permittees are owners and general operators of a project having day-to-day operational control of a facility or site. Secondary Permittees are individual builders, utility companies, and utility contractors...
within common developments. Blanket Secondary Permittees are utility companies that submit an NOI for coverage in all common developments statewide annually. Tertiary permittees are individual builders within a surface water drainage area, where the Primary Permittee has submitted an NOT for the surface water area.

The State NPDES General Permit program is implemented through Erosion and Sedimentation Control Local Issuing Authorities (LIAs). An LIA is the governing authority of a county or municipality that has been certified by the EPD.

The State Soil and Water Conservation Commission (SSWCC) revised the model erosion and sedimentation control ordinance to reflect 2003 amendments to the Georgia Erosion and Sedimentation Act. LIAs were to adopt the revised model ordinance by 1 July 2004. When the LIA enacts the model ordinance, all subsequent local land-disturbing activity (LDA) permits mirror the NPDES general permit requirements.

**Permit Requirements**

A construction owner/operator desiring coverage under this construction stormwater permit must submit an NOI to the LIA and, if the project is not regulated by an LIA, to EPD. The NOI must be submitted at least 14 days prior to the commencement of construction activities.

An Erosion, Sedimentation, and Pollution Control (ES&PC) Plan must be completed prior to submitting the NOI and prior to conducting any construction activity by any permittee. For new projects that will disturb equal to or greater than 50 acres, the permittee must submit a copy of the ES&PC Plan with the NOI to the LIA and, if the project is not regulated by an LIA, to EPD.

For storm- or emergency-related repair work, for sites where construction activities will result in land disturbance equal to or greater than 1 acre, the owner/operator or both must notify the appropriate EPD district office and/or LIA within 3 days of commencement of construction activities. The owner/operator must submit the NOI to the appropriate EPD district office (and/or LIA) as soon as possible after the storm or emergency-related event, but no later than 14 days after the commencement of construction activities, and must submit the ES&PC Plan in accordance with the permit.
For sites that disturb 250 acres or more, the owner/operator must develop an ES&PC Plan within 60 days and implement the Plan within 90 days of the effective date of the new permits.

A construction owner/operator must submit an NOT when an entire project has undergone final stabilization, all storm water discharges associated with construction activity have ceased, and the site is in compliance with the permit. A copy of the NOT must be sent to the LIA.

HAWAII

Permitting Authority

Hawaii is the NPDES stormwater permitting authority for all regulated stormwater discharges. Effective 10 March 2003, the Notice of General Permit Coverage (NGPC) covers discharges composed entirely of stormwater runoff associated with construction activities, including clearing, grading, and excavation that result in the disturbance of 1 acre or more of total land area. The General Permit also covers activities that disturb less than 1 acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb 1 acre or more of total land area.

Permit Requirements

The owner/operator must submit a complete the NOI to the Clean Water Branch of the State Department of Health no later than 30 days before the proposed starting date of the construction activity or 30 days before the expiration date of the applicable notice of general permit coverage.

There may be local erosion and sediment control requirements. If applicable, a county-approved erosion and sediment control plan as appropriate for the activity and a schedule for implementing each control must be submitted to the director with the NOI.

Termination of the NPDES General Permit coverage must be with the submittal of a Notice of Cessation form to the Clean Water Branch of the State Department of Health.

IDAHO

Permitting Authority

Idaho does not have NPDES stormwater permitting authority from the Federal Government. The stormwater permitting authority for construction activities is the USEPA. To discharge storm water from large and small construction activities, the construction owner/operator must apply for coverage under the Federal NPDES General Permit for Storm Water Discharges from Construction Activities (also known as the Construction General Permit, or CGP). The owner/operator must file such application with USEPA Region 10, prior to commencement of the construction activities. For the State of Idaho, except Indian Country, the Permit Number is IDR100000. For Indian Country within the State of Idaho, except Duck Valley Reservation lands (see USEPA Region 9), the Permit Number is IDR10000I.

The CGP covers any site of 1 acre and above, including smaller sites that are part of a larger common plan of development or sale, and replaces and updates previous USEPA permits.

Permit Requirements

A construction owner/operator must submit an NOI form to USEPA at least 7 days before start of construction.

Operators of regulated construction sites are required to develop and implement SWPPPs as a condition of the CGP.

In addition to the CGP requirements, a construction owner/operator must be aware of local stormwater regulations. The City of Boise requires all construction sites to have a trained and certified operator having day-to-day control over construction site activities. In addition, similar ordinances apply for Garden City, Ada County Highway District (for construction sites near right-of-way), Boise State University, and Canal Drainage District #3. A site disturbance permit is required for activities such as grading, excavating, and storm drainage or run-off control in Kootenai County.
The Catalog of Stormwater Best Management Practices (BMPs) for Cities and Counties is used by Department of Environmental Quality (DEQ) to evaluate mitigation practices for stormwater runoff from development projects. If other stormwater jurisdictions have BMP requirements that are more stringent than the DEQ Catalog of BMPs, those BMPs must be so indicated in the SWPPP and implemented.

An NOT form to end permit coverage under the CGP can be submitted provided the owner/operator has achieved final stabilization (e.g., 70 percent revegetation) for the construction site.

ILLINOIS

Permitting Authority

Illinois is the NPDES stormwater permitting authority for all regulated stormwater discharges.

The renewal of the NPDES General Permits for Stormwater Discharges from Industrial Activities and Construction Site Activities were finalized and signed as final permits on 30 May 2003. These permits were effective 1 June 2003 and will expire 31 May 2008.
This permit authorizes all discharges of storm water associated with industrial activity from construction sites that will result in the disturbance of 1 or more acres total land area, construction sites less than 1 acre of total land that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb 1 or more acres total land area or construction sites that are designated by the Illinois Environmental Protection Agency (IEPA) that have the potential for contribution to a violation of water quality standard or significant contribution of pollutants to waters of the State.

**Permit Requirements**

A construction site owner/operator must submit an NOI to obtain coverage under the Construction Site Activities General Permit 30 days before construction starts.

Construction Site Activities General Permit requires the permittee to notify the IEPA when the SWPPP is completed. The SWPPP does not need to be submitted to the IEPA, but must be kept on the construction site and accessible to everyone during construction activities.

Where local programs for sediment and erosion control, stormwater management, or site permits exist, the SWPPP must certify that it reflects the requirements of the local program. If local programs require plan approval, then the approval must be included in the SWPPP.

To terminate coverage under the Construction Site Activities General Permit, a construction site owner/operator must submit an NOT to the IEPA after the land disturbing activities are complete and the site has been finally stabilized. A site has been finally stabilized when a uniform perennial vegetative cover with a density of 70 percent of the cover for unpaved areas and areas not covered by permanent structures has been established or equivalent permanent stabilization measures have been used.

Developing Storm Water Pollution Prevention Plans and Best Management Practices – Summary Guidance: 

INDIANA

Permitting Authority

Indiana is the NPDES stormwater permitting authority for all regulated stormwater discharges. The Indiana NPDES general permit for stormwater discharges from construction activities is called a Rule 5 stormwater runoff permit. This permit program is managed by the Indiana Department of Environmental Management (IDEM) Office of Water Quality.

All land-disturbing activity of 1 or more acres must obtain a Rule 5 storm water runoff permit from IDEM. If soil disturbance to less than 1 acre occurs on a lot that is part of a larger common plan of development that already is permitted under Rule 5, that soil disturbing activity remains subject to Rule 5 permitting requirements.

Permit Requirements

The project site owner must submit an NOI to the IDEM Office of Water Quality to operate under the Rule 5 stormwater runoff permit. The NOI letter must be submitted to IDEM at least 48 hours prior to any soil disturbing activity.

Additionally, before any land disturbing activities can take place, the project site owner must submit a Construction Plan to the county Soil and Water Conservation District (SWCD). The exception is that Construction Plans for projects within the City of Indianapolis only (most of Marion County) are reviewed by the City of Indianapolis Permit Division. Plans for Speedway, Lawrence, Beech Grove, and Southport along with the City of Indianapolis Capital Improvement projects, and all road/highway plans, must still be submitted to the SWCD.

Because the county SWCD has up to 28 days to provide review and approval of the Rule 5 Construction Plans, a project site owner wishing to obtain a Rule 5 permit should plan to submit the Construction Plan to the county SWCD at least 30 days before any soil disturbance takes place.

The project site owner must submit two other documents along with the NOI to IDEM. One is a construction plan review approval verification form, or "construction approval document",
from the SWCD or Indianapolis Permit Division stating that the Construction Plan is sufficient. The second is proof of publication in a newspaper of general circulation of the project site owner's notification to the public.

To terminate permit coverage, the project site owner must submit an NOT letter to IDEM. The project site owner must remove all temporary erosion control fixtures and the entire site must be permanently stabilized.

- Rule 5: Storm Water Runoff Associated with Land Disturbing Activity, Urban Wet Weather Programs for Storm Water:
IOWA

Permitting Authority

Iowa is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country. For regulated stormwater discharges within Indian Country, USEPA is the NPDES permitting authority. Indian Country construction activities in Iowa must apply for coverage under the USEPA Construction General Permit for Iowa (Permit Number: IAR10000I).

Iowa Department of Natural Resources (IDNR) NPDES General Permit No. 2, Storm Water Discharge Associated with Industrial Activity for Construction Activities, covers stormwater discharges from construction activities (land disturbances). This permit authorizes the discharge of storm water associated with industrial activity from construction sites or common plans of development or sale that will result in the disturbance of 1 or more acres total land area.

Permit Requirements

To obtain permit coverage, a construction owner/operator must submit an NOI to the IDNR. Along with the NOI, proof of public notification of construction activity must be submitted from two area newspapers with the highest circulation.

Iowa’s General Permit No. 2 requires that an SWPPP for the construction activity be developed before the NOI is submitted to the IDNR. The SWPPP is to be implemented with the start of construction. A construction owner/operator must include in the SWPPP procedures and requirements specified in applicable
sediment and erosion site plans or stormwater management plans approved by local officials.

Within 30 days after final stabilization at a construction site, the construction operator or owner must submit a Notice of Discontinuation to the IDNR.

**KANSAS**

**Permitting Authority**

Kansas is the NPDES stormwater permitting authority for all
regulated stormwater discharges except those within Indian
Country. For regulated stormwater discharges within Indian
Country, USEPA is the NPDES permitting authority. Indian
Country construction activities in Kansas must apply for
coverage under the USEPA Construction General Permit for Kansas
(Permit Number: KSR10000I).

The Industrial Programs Section within the Bureau of Water of
the Kansas Department of Health and Environment (KDHE) manages
permits for stormwater discharges associated with construction
and industrial activities.

Owners or operators of any project or combination of projects
who engages in construction activities which will disturb 1 or
more acres must have authorization to discharge stormwater
runoff under the construction stormwater general permit S-MCST-
0110-1.

**Permit Requirements**

Application for the construction stormwater permit is made by
completing an NOI form and submitting it to KDHE at least 60
days before starting construction.

The primary requirement of the general permit is for the
permittee to develop and implement a Stormwater Pollution
Prevention (SWP2) plan. An erosion control plan summarizing the SWP2 plan and a site plan showing the erosion control measures and BMPs that will be used during the project must be submitted with the NOI. If there are local requirements for erosion and sediment control or stormwater management, the applicant should contact the local authority to determine if the SWP2 plan needs to be sent to them for review or approval. Kansas City, Overland Park, Topeka, and Wichita regulate discharges of construction stormwater runoff.

When the soil-disturbing activity is completed and final stabilization of the site is achieved, the permittee must notify KDHE to terminate the authorization to discharge.

KENTUCKY

Permitting Authority

Kentucky is the NPDES stormwater permitting authority for all regulated stormwater discharges. The KPDES Branch of the Kentucky Division of Water reviews and approves permit applications for stormwater point source discharges associated with construction activities. Construction activities that disturb 1 acre or more are required to have coverage under the General KPDES Permit for Storm Water Point Source Discharges – Construction Activities, Permit No. KYR10.
Permit Requirements

To apply for coverage under this general permit, an NOI form must be submitted to the Division of Water of the Kentucky Department of Environmental Protection at least 48 hours before the activity begins. Sites that discharge construction storm water to a municipal separate storm sewer system (MS4) must submit a copy of the NOI to the operator of the MS4 48 hours before construction activity begins.

A stormwater BMP plan must be completed before submittal of the NOI for coverage under this permit, and this plan must be implemented beginning with the initiation of construction activities. The BMP plan must include any requirements specified in sediment and erosion control plans, stormwater management plans or permits that have been approved by local jurisdictions. The BMP Plans do not need to be submitted with the NOI.

When all stormwater discharges associated with construction activity are eliminated and the site has been finally stabilized, the owner or operator must submit a signed copy of an NOT form in order to end coverage under this general permit.

LOUISIANA

Permitting Authority

Louisiana is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country. For regulated stormwater discharges within Indian Country, USEPA is the NPDES permitting authority. Indian Country construction activities in Louisiana must use the USEPA CGP for Louisiana, Permit Number: LAR15000I.

Permit Number LAR200000, LPDES Storm Water General Permit for Small Construction Activities, authorizes the discharge of storm water from small construction activities (greater than 1 acre but less than 5 acres). A permit is also required for construction activities disturbing less than 1 acre but part of a larger common plan of development or sale with a planned disturbance of equal to or greater than 1 acre and less than 5 acres.

Permit Number LAR100000, LPDES Storm Water General Permit applies to small construction activities of 5 acres or more.

Permit Requirements
Written notification of intent to be covered under Permit Number LAR200000, LPDES Storm Water General Permit for Small Construction Activities, is not required. Operators are automatically covered under this permit. An SWPPP must be developed and implemented upon commencement of construction activities.

When a construction project is complete and the site has been stabilized in accordance with the permit, the permittee must submit a Completion Report form. The form must be submitted to the Permits Division by 28 January of the year following the calendar year in which the project was completed.

To be covered under Permit Number LAR100000, LPDES Storm Water General Permit for Construction Activities, a construction owner/operator must submit an NOI at least 48 hours prior to the commencement of construction activities.

An SWPPP must be completed prior to the submittal of the NOI for Permit Number LAR100000. The owner/operator must certify that the SWPPP is compliant with any applicable State and local sediment and erosion plans. A copy of the plans or permits does not need to be included with the NOI submission.

Permittees wishing to terminate coverage under Permit Number LAR100000 must submit an NOT within 30 days after final stabilization (as defined by the permit) has been achieved on all portions of the site.

MAINE

Permitting Authority

Maine is the NPDES stormwater permitting authority for all regulated stormwater discharges. The Maine Construction General Permit (MCGP) authorizes the discharge of stormwater associated with construction activity to waters of the State. This general permit is effective 20 July 2004 and expires 20 July 2006. The Maine Stormwater Program includes the regulation of stormwater under both the Site Location of Development Law (Site Law) and Stormwater Management Law. A landowner, contractor, or developer may need coverage under the MCGP if a construction project will directly discharge to a surface waterbody, and the construction will result in any of the following: 1 acre or more of disturbed area; a common plan of development located in an area subject to Land Use Regulation Commission (LURC) jurisdiction and requiring an LURC permit; or a common plan of development located outside LURC jurisdiction and requiring a Stormwater Management Law or Site Law permit.

A “common plan of development” refers to a subdivision as determined by the LURC if located in an unorganized area or by the municipality where the subdivision is located. It requires coverage under the MCGP because, over the life of the project (including work on the lots), at least 1 acre of land is expected to be disturbed.

The LURC Development Law applies only to areas of the State administered by LURC. The Maine Site Law (in regard to subdivisions), Erosion and Sedimentation Control Law, and Stormwater Management Law, apply to construction projects or portions of projects outside the jurisdiction of LURC.

The MCGP does not replace or affect existing Stormwater Management Law, Site Law, or LURC requirements. The DEP is in the process of consolidating application requirements to better coordinate some of these programs. If a project also requires a Stormwater or Site Law permit, the project owner/operator may reference material submitted with those applications provided that it substantively addresses the standards of the MCGP.

Maine’s Erosion and Sedimentation Control law requires basic controls and site stabilization when a project involves filling, displacing, or exposing earthen material. No permit is required. The law sets a minimum across-the-board standard that helps prevent harm to surface waters.
Permit Requirements

To seek coverage under the MCGP, a construction project owner or operator must submit an NOI to the Maine Department of Environmental Protection (MDEP). An NOI must be reviewed and approved by the Department prior to beginning construction activity or causing soil disturbance. If the DEP does not speak with or write to the applicant within this 14-day period regarding NOI, the application is deemed approved by the Department and the applicant may proceed to carry out the activity.

Construction activities that require a permit under the Site Location of Development or the Storm Water Management Acts may not proceed until any required permit under those laws is obtained.

If the project owner wishes the MDEP to rely in whole or part on a submission that is part of a Site Law or Stormwater Management Law application, the owner must submit a letter with the NOI describing the previous submission and the extent to which it should be relied upon, and listing the standards addressed by any supplementary material.

A project owner must complete and maintain an Erosion and Sedimentation Control (ESC) plan if the project involves a disturbed area where 1 acre or more will be disturbed in the watershed of an impaired waterbody or 3 acres or more will be disturbed in any watershed. A project owner must also complete and maintain an ESC plan if the project involves a common plan where the common plan of development drains to an impaired waterbody and also requires a Stormwater Law, Site Location of Development Law, or LURC permit; or the common plan of development does not drain to an impaired waterbody but will include 3 acres or more of disturbed area, and also requires a Stormwater Law, Site Location of Development, or LURC permit. A waterbody is “impaired” if it is not meeting water quality standards, as determined by the DEP. If construction activity in a watershed may cause or contribute to the existing impairment of the river, stream or great pond, the waterbody is designated as an impaired waterbody. The list of construction-related (C) water bodies is included in Appendix D of the MCGP.

If a project includes 3 acres or more of disturbed area and directly discharges to an unimpaired waterbody, the erosion and sedimentation control plan can be signed by a qualified individual who certifies that the plan meets the standards of
the general permit. Qualified individuals include: a person certified in erosion control practices or a “professional in erosion and sedimentation control” so designated by the Maine Nonpoint Source Training and Resources Center; a Maine registered professional engineer knowledgeable in stormwater and erosion and sedimentation control; and Soil and Water Conservation District staff trained to develop erosion and sedimentation control plans, working in a District with which the DEP has an agreement concerning review of these plans. A construction project owner or operator must submit an NOT within 20 days of the completion of permanent stabilization.

MARYLAND

Permitting Authority

Maryland is the NPDES stormwater permitting authority for all regulated stormwater. Maryland Department of the Environment (MDE), General Permit for Construction Activity, General NPDES Permit Number MDR10, State Discharge Permit Number 03 authorizes stormwater discharges from construction activities. The General Permit was effective 1 March 2003 and expires 28 February 2008. This General Permit is required for all construction activity in Maryland with a planned total disturbance of 1 acre or more.

Several areas in Maryland have been designated as special protection areas. Additional permitting requirements, and restrictions exceeding general State performance standards, may apply to construction projects in these locations. The special protection areas include Montgomery County, Patuxent River, and Chesapeake Bay Critical Area.

Permit Requirements

A person planning construction activity must submit an NOI to the MDE Water Management Administration, at least 48 hours prior to any land-disturbing activities, to be authorized to discharge construction stormwater under this General Permit.

Prior to commencing construction, a construction owner/ operator who obtains coverage under this general permit must obtain approved erosion and sediment control plans. For State and Federal construction projects, erosion/ sediment control plans and stormwater management plans are reviewed and approved by MDE.

Where a site has been finally stabilized and all stormwater discharges from construction sites that are authorized by this permit are eliminated, the authorized permittee of the facility must submit an NOT form to MDE.

**MASSACHUSETTS**

**Permitting Authority**

Massachusetts does not have NPDES stormwater permitting authority from the Federal Government. Both the Massachusetts Department of Environmental Protection (DEP) and the USEPA regulate stormwater in Massachusetts. Massachusetts’s statutory and regulatory provisions require the protection of Outstanding Resource Waters (ORWs), designated in the Massachusetts Surface Water Quality Standards, 314 CMR 4.00. Also, municipalities may have local drainage, wetland, or other ordinances that regulate stormwater. ORWs include surface public water supplies and their tributaries, wetlands bordering surface public water supplies and their tributaries, vernal pools certified by the MA Division of Fisheries and Wildlife Natural Heritage and Endangered Species Program, and other specifically designated waters listed in the Surface Water Quality Standards. ORWs require a higher level of protection and have more stringent requirements than other waters. Discharge of pollutants to a Massachusetts ORW is severely restricted and requires special review by DEP. These requirements are outlined in the Surface Water Quality Standards.

To discharge stormwater from large and small construction activities, the construction operator must apply for coverage under the Federal NPDES General Permit for Storm Water Discharges from Construction Activities. The operator must file such application with USEPA Region 1, prior to commencement of the construction activities. For new construction and reconstruction in or near wetlands, the construction project owner/operator must apply for a permit for point and non-point source stormwater discharges. Local conservation commissions administer this permit program, required only when the
construction activity affects Wetlands Protection Act jurisdictional area(s).

**Permit Requirements**

To apply for coverage under the Federal CGP, an NOI form must be submitted to the USEPA at least 7 days before construction starts. A construction project owner/operator applying for the general permit must consider the protection of ORW. To apply for coverage under BRP WM 08B - NPDES Stormwater General Permit for Discharges to ORWs from Construction Sites or Industrial Sites, an NOI must be filed with DEP for any existing or proposed stormwater discharge to ORWs. The WM 08B NOI must be filed with DEP prior to filing a general permit NOI with USEPA.

The purpose of the WM 08B NOI is to inform DEP of stormwater discharges to ORWs prior to filing for coverage under either USEPA general permit noted above. With the information provided in the WM 08B NOI, DEP can determine whether additional permits or other measures are needed to protect the receiving surface water from degradation. Also, the construction project owner/operator must submit to DEP a complete Form BRP WM 09 - Approval of NPDES Stormwater Pollution Prevention Plans for Construction or Industrial General Permits (Discharging to Outstanding Resource Waters only) when seeking coverage under the USEPA's CGP for existing or proposed discharges to ORWs. DEP approval of an SWPPP is required in cases where DEP has reviewed the information submitted in WM 08B NOI and determined that additional evaluation of proposed stormwater pollution control measures is necessary.

As a condition of the USEPA general permit, the construction owner/operator must prepare and implement an appropriate SWPPP. DEP’s WPA Appendix B - Stormwater Management Form is intended to ensure that proposed stormwater control designs meet the DEP’s Stormwater Management Policy. DEP recommends that permit applicants submit the Stormwater Management Form with their NOI, as well as supporting documentation and plan, for conservation commission review.

**MICHIGAN**

Permitting Authority

Michigan is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country. For Indian Country, USEPA is the NPDES permitting authority. Indian Country construction activities in Michigan must use the USEPA CGP. The Permit Number is MIR10000I.
The Michigan Department of Environmental Quality (MDEQ) is the NPDES stormwater permitting authority. The DEQ currently uses Permit-by-Rule for NPDES authorization. This is a State rule that allows Michigan landowners involved in construction activities to easily obtain the permit coverage required under the NPDES Storm Water Regulations. Coverage under Permit-by-Rule requires that land owners first have coverage under Part 91 Soil Erosion and Sedimentation Control (SESC) Program, Part 615 Supervision of Wells, or Part 631 Reclamation of Mining Lands.

All construction activities that meet the following criteria are subject to Permit-by-Rule requirements: there will be a total earth disturbance of 1 or more acres; the site will have a point source discharge of storm water to waters of the State, either directly or through a separate storm sewer.

An earth disturbance means a man-made change in the natural cover or topography of the land. This may include road widening, complete road surfacing that disturbs the soil, new construction, cut and fill activities, construction on lands previously used for agriculture, and drain construction activities. All construction projects owned or operated by public entities (municipalities, school districts, etc.), with earth disturbances of one acre or more, with a discharge to waters of the State are subject to the same regulations as privately owned developments.

**Permit Requirements**

Construction activities of 5 acres or more discharging construction stormwater to waters of the State are required to submit a Notice of Coverage (NOC) to obtain coverage under the Permit by Rule. Prior to submitting the NOC, an SESC Permit must be obtained from the appropriate local agency. A copy of the SESC Permit must be submitted with the NOC to the MDEQ before any construction begins at the site. The permittee is deemed to have the required coverage if the NOC is administratively complete.

Construction activities that disturb 1 to 5 acres are not required to submit an NOC. These sites have automatic coverage under Permit-by-Rule if they have obtained coverage under the SESC Program. Although there are no application requirements, the construction site owner must still comply with the requirements of Permit-by-Rule.

Two core requirements to Michigan's Permit-by-Rule: the permittee must be in compliance with the requirements of his or
her SESC Permit; and the permittee must inspect the soil erosion control measures at the site to ensure that they are working correctly.

The inspections required of the permittee must be conducted by a stormwater operator who is trained and certified by the MDEQ. The inspections of the soil erosion control measures must be done once per week and within 24 hours of a precipitation event that results in a stormwater discharge from the site.

An SESC Permit is required for any earth change that disturbs 1 acre or more or is within 500 feet of a lake or stream. The responsibility for enforcing the SESC Program has been delegated to the County Enforcement Agency (CEA). In some cases, this responsibility has been taken over locally by cities or townships, which are known as Municipal Enforcement Agencies (MEAs).

The site is considered to be stabilized when all permanent control structures have been installed, maintenance for the permanent controls has been arranged, vegetation is well established, and temporary controls have been removed. Once the site has been stabilized and the SESC Permit has been terminated, the permittee must submit an NOT to the MDEQ. This terminates coverage under Permit-by-Rule. Coverage under Permit-by-Rule expires after 5 years. However, most SESC Permits expire after 1 year. If the SESC Permit expires or is terminated before the construction site is stabilized, the NOC would also expire. A new SESC Permit and an NOC, must be submitted to obtain appropriate coverage.

MINNESOTA

Permitting Authority

Minnesota is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country. For regulated stormwater discharges within Indian Country, USEPA is the NPDES permitting authority. Indian Country construction activities in Minnesota must use the USEPA CGP. The Permit Number is MNR10000I.

The Minnesota Pollution Control Agency (MPCA) administers the General Permit to Discharge Storm Water Associated with Construction Activity under the National Pollutant Discharge Elimination System/State Disposal System Permit Program, Permit No. MN R100001.

“Construction activity” includes clearing, grading, and excavation that disturbs land of equal to or greater than 5 acres and includes the disturbance of less than 5 acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb 5 acres or more.

“Small construction activity” includes clearing, grading, and excavation that disturbs land of equal to or greater than 1 acre, and includes the disturbance of less than 1 acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb equal to or greater than 1 and less than 5 acres. Small construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the facility.

Permit Requirements

The construction site owner/operator must submit an Application for General Storm-water Permit for Construction Activity project for each 1 or more acre of land disturbance activity. The owner and operator of a common plan of development or sale that will ultimately disturb 1 or more acres must submit an application to the MPCA.
An SWPPP must be completed prior to submitting any permit application and prior to conducting any construction activity by any required Permittee. The SWPPP does not need to be submitted to the MPCA but is to be retained by the owner.

For certain projects or common plans of development or sale disturbing 50 acres or more, the application must be submitted at least 30 days before the start of construction activity. This requirement pertains to projects that have a discharge point on the project that is within 2000 feet of, and flows to, a special water listed in Appendix A, Part B of the permit or waters listed as impaired under section 303(d) of the Federal Clean Water Act (see MPCA’s web site). Applicants must submit a completed application form and SWPPP including all calculations for the Permanent Storm Water Management System.

Construction sites that discharge near special waters, waters with qualities that warrant extra protection, must use additional BMPs and enhanced runoff controls. Sites that discharge near an impaired waterbody for which there is a TMDL allocation for sediment and parameters associated with sediment transport must meet special conditions. Discharges to calcareous fens, a very rare and unique wetland, may require an individual permit.

Permittee(s) wishing to terminate coverage under this General Permit must submit an NOT to the MPCA within 30 days after final stabilization has been achieved on all portions of the site for which the Permittee is responsible (including the removal of all temporary measures such as silt fences and, if applicable, returning agricultural land to its preconstruction agricultural use).

MISSISSIPPI

Permitting Authority

Mississippi is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country. Indian Country construction activities in USEPA Region 4 must use the Region 4 Construction General Permit.

The General Permits Branch of the Mississippi Environmental Permits Division (EPD) administers the Small Construction Storm Water General Permit and Large Construction Storm Water General Permit programs.

Small Construction Activity is land-disturbing activities equal to or greater than 1 acre and less than 5 acres of land.

Large Construction Activity includes clearing, grading, and excavating resulting in a land disturbance that will disturb equal to or greater than 5 acres of land or will disturb less than 5 acres of total land area but is part of a larger common plan of development or sale that will ultimately disturb equal to or greater than 5 acres.

Permit Requirements

To discharge stormwater from small construction projects, an owner or operator must complete a Small Construction Notice of Intent (SCNOI) before construction activity begins. The SCNOI is submitted only to the Mississippi Department of Environmental Quality (MDEQ) and only upon request from MDEQ. Additionally, the owner/operator must develop and implement an SWPPP before construction may begin. The SWPPP must comply with all local stormwater ordinances. The SWPPP is submitted only to the MDEQ and only upon request from MDEQ. However, the SCNOI and SWPPP must be maintained at the permitted site or locally available in case inspector review is necessary.

To discharge stormwater from large construction projects, an owner or operator must submit a Construction Notice of Intent (CNOI) at least 30 days prior to the commencement of construction, or 15 days if the storm water pollution prevention plan has previously been approved. A SWPPP must be developed and submitted (before construction start) to the MDEQ, with a copy retained at the permitted site or locally available.

MISSOURI

Permitting Authority

Missouri is the NPDES stormwater permitting authority for all regulated stormwater discharges. The Water Pollution Control Branch, Water Protection and Soil Conservation Division of the Missouri Department of Natural Resources administers the construction stormwater permit program. Developers/landowners who are developing land within Missouri must apply for a land disturbance storm water permit. The four types of stormwater permits are listed below.

Permit Requirements

(1) Land Disturbance by a Government Authority with an Approved Erosion Control Plan (permit number MO-R1000). This permit covers land disturbance activities that impact 1 acre or more and that are performed by or under contract to a city, county, or State government agency with a stormwater control program approved by the Missouri Department of Natural Resources.

(2) Land Disturbance within a Governmental Unit with an Approved Erosion Control Plan (permit number MO-R100A). This permit covers land disturbance activities that impact 1 acre or more and that are performed within a city or county with a stormwater control program approved by the department.

(3) Land Disturbance of One Acre or More (permit number MO-R101000). This is a general permit that authorizes discharges from land disturbances that impact 1 acre or more and are not covered under either of the permits described above. This permit requires that an SWPPP be developed before any site vegetation is removed or disturbed and before a permit can be issued. The SWPPP does not need to be submitted with the application unless specifically requested. The SWPPP requires that the permittee use BMPs on site to reduce the amount of sediment and other pollutants in the storm water associated with the land disturbance activities. The permittee must fully implement the provisions of the SWPPP required under this general permit throughout the term of the land disturbance project.

(4) Land Disturbances within Valuable Water Resource Areas (permit number MO-R109000). This permit covers land disturbance activities impacting 1 acre or more that are near valuable water resources. These areas are within 1,000 feet of a lake used primarily as a public water supply, outstanding resource waters.
such as cold water trout streams, lakes participating in USEPA’s “Clean Lakes Program”, at or within 100 feet of major reservoirs or permanent streams (except the Missouri or Mississippi Rivers); and sinkholes, losing streams, or other direct conduits to groundwater. This permit also requires the development of an SWPPP section of this technical bulletin.

MONTANA

Permitting Authority

Montana is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country. For regulated stormwater discharges within Indian Country, USEPA is the NPDES permitting authority. Indian Country construction activities in Montana must use the USEPA CGP. The Permit Number is MTR100001.

The Montana Department of Environmental Quality (MDEQ) administers the General Permit No. Mtr100000 For Storm Water Discharges Associated With Construction Activity.

Permit Requirements

For a stormwater discharge associated with construction activity with construction-related disturbance under 5 acres of total land area, an NOI package is not required until the Department formally incorporates USEPA Phase II requirements into the Administrative Rules of Montana.

Any person who is the operator of a stormwater discharge associated with construction activity that requires coverage under the General Permit must submit an NOI to the Department.

The operator must develop an SWPPP and submit a copy of the SWPPP to MDEQ at the same time as the NOI form. This operator must implement the SWPPP at the time construction activity commences.

Any SWPPP that is prepared for a construction activity that includes 20 acres or more in total disturbance related to construction activity, must be reviewed and stamped by a professional engineer licensed in the State of Montana.

Where a site has been finally stabilized as defined in the permit, the operator must submit a standard MDEQ NOT form.

NEBRASKA

Permitting Authority

Nebraska is the NPDES permitting authority for all regulated stormwater discharges except those within Indian Country.

The existing permit (effective 1 August 1997) has been extended beyond its original expiration date of 31 July 2002 and a pre-public notice draft was available for review by potential stakeholders as of February 2003.

Permit Requirements

Small construction sites that receive coverage under the existing permit need to comply with all the requirements of the permit; there are no allowances for reduced requirements. However, in most instances, the erosion and sediment control practices required on these smaller sites do not need to be as extensive as those on larger sites.

At this time, waiver opportunities for small construction sites are not available in Nebraska, although Federal regulations allow the Director to waive the need for permit coverage. The Department may ultimately promulgate regulations that include these waiver opportunities, but the restrictiveness of the Federal waiver allowances appears to significantly limit their actual application. As of 10 March 2003, in order to discharge stormwater from a construction site, all construction projects that disturb 1 acre or more of land must have either an individual stormwater permit or coverage under one of Nebraska’s general permits.

Disturbance includes, but is not limited to, soil disturbance, clearing, grading, and excavation. Operators of sites disturbing less than 1 acre are also required to obtain a permit if their activity is part of a “larger common plan of development or sale” with a planned disturbance of 1 acre or greater.

To apply for an individual permit or for coverage under a statewide general permit, an application must be filed with the Department of Environmental Quality prior to commencement of construction activities.

In addition to these statewide rules, the operator may be required to meet additional local stormwater and erosion control
regulations. Check with city or county government to determine if additional local rules apply to the construction project.

NEVADA

Permitting Authority

Nevada is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country.

Permit Requirements

As of 10 March 2003, in order to discharge stormwater from a construction site, all construction projects that disturb 1 acre or more of land must have either an individual stormwater permit or coverage under one of Nevada’s general permits.

Disturbance includes, but is not limited to, soil disturbance, clearing, grading, and excavation. Operators of sites disturbing less than 1 acre are also required to obtain a permit if their activity is part of a “larger common plan of development or sale” with a planned disturbance of 1 acre or greater.

To apply for an individual permit or for coverage under a statewide general permit, operators must file an application with the Environmental Protection Division, Department of Conservation and Natural Resources prior to commencement of construction activities.

In addition to these statewide rules, operators may be required to meet additional local stormwater and erosion control regulations. Check with city or county government to determine if additional local rules apply to the construction project.

The conditions set in Nevada’s permit language are the minimum requirements to maintain and implement an effective stormwater program within the confines of USEPA-published rules for use in stormwater permits. The permit is based on BMPs such as diversion, detention, erosion control, sediment traps, gravel construction entrances, covered storage, spill response, and good housekeeping that the site operator selects subject to Division approval.

New Hampshire

Permitting Authority

New Hampshire does not have NPDES stormwater permitting authority from the Federal Government. The stormwater permitting authority for construction activities is the USEPA. To discharge storm water from large and small construction activities, the construction operator must apply for coverage under the Federal NPDES General Permit for Storm Water Discharges from Construction Activities (also known as the
Construction General Permit, or CGP). The State of New Hampshire Permit Number is NHR100000.

The CGP covers any site 1 acre and above, including smaller sites that are part of a larger common plan of development or sale.

**Permit Requirements**

A construction owner/operator must submit an NOI form to USEPA at least 7 days before start of construction.

Operators of regulated construction sites are required to develop and implement SWPPPs as a condition of the CGP.

In addition to USEPA’s CGP, the New Hampshire Department of Environmental Services (DES) regulates construction activities through the Alteration of Terrain (Site Specific) permit. The Alteration of Terrain (Site Specific) permit applies to construction, earth moving, or other significant alteration of the characteristics of the terrain when a contiguous area of 100,000 square feet (or 50,000 square feet if within the Protected Shoreline) will be disturbed.

Although the Alteration of Terrain (Site Specific) permit and USEPA’s CGP differ in coverage based on the size and location of the project, there is considerable overlap between the plans needed to be developed for the two permits. A good plan can satisfy all of the requirements. Other local building and erosion and sediment control permits may be required.

An NOT form to end permit coverage under the CGP can be submitted provided the owner/operator has achieved final stabilization (e.g., 70 percent revegetation) for the construction site.

NEW JERSEY

Permitting Authority

New Jersey is the NPDES stormwater permitting authority for all regulated stormwater discharges.

The New Jersey Department of Environmental Protection (DEP), Bureau of Nonpoint Pollution Control (Bureau) and the New Jersey Department of Agriculture and the State Soil Conservation Committee through the 16 local Soil Conservation Districts (SCD) administer the NJ Pollutant Discharge Elimination System (NJPDES) rules, including a Construction Activity Stormwater General Permit (NJ0088323).

Permit Requirements

A Request for Authorization (RFA) must be filed with the SCD at least 30 days prior to land disturbance. It is recommended that the RFA be filed with the SCD at the same time the Soil Erosion and Sediment Control Plan certification application is filed.

The Soil Erosion and Sediment Control Act of 1975 as amended (N.J.S.A. 4:24-39 et seq.) requires that virtually all nonagricultural land disturbance activities disturbing more than 5,000 square feet of surface area be performed in accordance with a plan for soil erosion and sediment control that meets SSCC standards as certified by the SCD.

The Stormwater Pollution Prevention plan must be certified by the local SCD as meeting Standards for Soil Erosion and Sediment Control. Discharge forms can be obtained through the local soil conservation districts.

Construction that will ultimately result in the disturbance of 1 or more acres of land, or increase impervious surfaces by one-quarter acre (or 10,890 square feet) or more, must meet the requirements of the Stormwater Management Rules in order to receive local approval or a permit from the Department of Environmental Protection for the new development.

NEW MEXICO

Permitting Authority

The stormwater permitting authority for construction activities is the USEPA. To discharge storm water from large and small construction activities, the construction owner/operator must apply for coverage under the Federal NPDES General Permit for Storm Water Discharges from Construction Activities (also known as the Construction General Permit, or CGP). For the State of New Mexico, except Indian Country, the Permit Number is NMR150000. For Indian Country within the State of New Mexico, the Permit Number is NMR150001. (Navajo Reservation Lands are covered under Arizona permit AZR10000I and Ute Mountain Reservation Lands are covered under Colorado permit COR10000I.)

New Mexico is working toward having a completed program authorization package by the end of 2006. It is proposing statute changes that are necessary for program authorization during the 2005 legislative session and implementation regulations developed by the end of 2005. Permitting authority over tribal lands will remain with the USEPA.

Permit Requirements

A construction owner/operator must submit an NOI form to USEPA at least 7 days before start of construction.

Operators of regulated construction sites are required to develop and implement SWPPPs as a condition of the CGP.

An NOT form to end permit coverage under the CGP can be submitted provided the owner/operator has achieved final stabilization (e.g., 70 percent revegetation) for the construction site.

NEW YORK

Permitting Authority

New York is the NPDES stormwater permitting authority for all regulated stormwater discharges except those within Indian Country.

Permit Requirements

As of 10 March 2003, in order to discharge storm water from a construction site, all construction projects that disturb 1 acre or more of land must have either an individual stormwater permit or coverage under one of New York’s general permits.

Disturbance includes, but is not limited to, soil disturbance, clearing, grading, and excavation. Operators of sites disturbing less than 1 acre are also required to obtain a permit if their activity is part of a “larger common plan of development or sale” with a planned disturbance of 1 acre or greater.

To apply for an individual permit or for coverage under a statewide general permit, the operator must file an application with the Department of Environmental Conservation prior to commencement of construction activities.

In addition to these statewide rules, operators may be required to meet additional local stormwater and erosion control regulations. Check with city or county government to determine if additional local rules apply to the construction project.

USEPA recommends that procedures for site plan review include the review of individual pre-construction site plans to ensure consistency with local (ESC) requirements. Procedures for site inspections and enforcement of control measures could include steps to identify priority sites for inspection and enforcement based on the nature of the construction activity, topography, and the characteristics of soils and receiving water quality. It is encouraged that appropriate educational and training measures be given to construction site operators. New York has additional permit conditions.

NORTH CAROLINA

Permitting Authority

North Carolina is the NPDES permitting authority for all regulated stormwater discharges except those within Indian Country.

As of 10 March 2003, this permit will be applicable to point source discharges of storm water from construction activities disturbing 1 or more acres of land.

Permit Requirements

The submission of a proposed Erosion and Sedimentation Control Plan to the Division of Land Resources or delegated local program is considered to take the place of an NOI for coverage under this General Permit for those projects requiring this Permit coverage. Coverage under this General Permit shall become effective upon issuance of an approval for the Erosion and Sedimentation Control Plan by the Land Quality Section of the Division of Land Resources or delegated local program.

NORTH DAKOTA

Permitting Authority

North Dakota is the NPDES permitting authority for all regulated stormwater discharges except those within Indian Country. For regulated stormwater discharges on Tribal Lands, USEPA Region 8 is the NPDES permitting authority. Indian Country construction activities within the State of North Dakota, as well as that portion of the Standing Rock Reservation located in South Dakota (except for the portion of the lands within the former boundaries of the Lake Traverse Reservation) must apply for coverage under the USEPA Construction General Permit for North Dakota. The Permit Number is NDR10000I.

This permit applies to all new and existing discharges of storm water from construction activity involving land disturbance of equal to or greater than 1 acre. This includes the disturbance of less than 1 acre of total land area that is part of a larger common plan of development or sale, if the larger common plan will ultimately disturb equal to or greater than 1 acre.

 Permit Requirements

A construction site owner/operator must submit an NOI form to the North Dakota Department of Health (NDDH) to obtain coverage for stormwater discharges from all of their small construction sites. The NOI for small construction activity must be submitted to the Department prior to the start of construction.

For small construction activities, an SWPPP must be developed and implemented, but not submitted to the Department unless requested.
The operator of large construction activity must submit an NOI and SWPPP 30 days before construction starts to obtain coverage for stormwater discharges for each construction project. Large construction activity involves land disturbance of equal to or greater than 5 acres and also includes the disturbance of less than 1 acre of total land area that is part of a larger common plan of development or sale, if the larger common plan will ultimately disturb equal to or greater than 5 acres.

The NOT can be used by large construction activities to notify the Department that a site has been stabilized to 70 percent of pre-existing conditions. However, small construction activities must submit the NOT when all activity is completed.

OHIO

Permitting Authority

Ohio is the NPDES Permitting Authority for all regulated stormwater discharges.

Permit Requirements

The 21 April 2003 renewal of the CGP OHC000002 requires a Storm Water Pollution Prevention Plan (SWP3) be completed prior to the submittal of an NOI application to obtain coverage under the CGP. The NOI application must be submitted at least 21 days prior to the initiation of construction activities.

Although the SWP3 does not need to be submitted to Ohio EPA to obtain coverage under the CGP, it must be retained at the construction site at all times during the construction activity. However, the local governing authority (i.e., county, city, village, or township) may require approval of an SWP3 or a sediment and erosion control plan prior to initiation of construction activities.

The CGP renewal contains some new clarifying language and some new requirements including NOI submittal timeframe, new SWP3 requirements including sediment and erosion control standards, new structural post-construction BMP design standards, new inspection and maintenance requirements, new NOT requirements, and a new definition of operator.

OKLAHOMA

Permitting Authority

Oklahoma is the NPDES Permitting Authority for all regulated stormwater discharges except those within Indian Country and specific discharges. Oklahoma in its regulation OAC 252:605 1-5(b)(3) adopted the Federal requirements for the NPDES Permit. The Oklahoma Department of Environmental Quality (ODEQ) administers the stormwater permitting program.

Permit Requirements

In order for stormwater discharges from construction activities to be authorized under this general permit, a construction site operator must develop an SWPPP and submit an NOI to ODEQ. The SWP3 must be implemented upon commencement of construction activities.

Unless the project is located within an aquatic resource of concern and the construction site owner/operator has not certified option (c) or (d) of the general permit, the SWP3 does not need to be submitted with the NOI.

All permittees must submit an NOT within 30 days after final stabilization has been achieved on all portions of the site for which the permittee is responsible (including, if applicable, returning agricultural land to its pre-construction agricultural use).

OREGON

Permitting Authority

Oregon is the NPDES Permitting Authority for all regulated  
stormwater discharges except those within Indian Country.

Permit Requirements

A Land Use Compatibility Statement (LUCS) is required for nearly  
all Department of Environmental Quality (DEQ) permits, some  
general permits, and certain approvals of plans or related  
activities that affect land use.  Oregon law requires state  
agency activities that impact land use be consistent with local  
comprehensive plans.
To obtain an NPDES Permit, the applicant must contact the appropriate DEQ regional office and complete an application. The application must include location of the site, description of the site activities, site evaluation for discharges other than storm water, site drainage map, and a Land Use Compatibility Statement signed by the local land use authority.

Construction projects must have a DEQ-approved Erosion and Sediment Control Plan prior to beginning any on-site activities.

Several municipalities are issuing the construction permits for DEQ. The processing time and application procedure for these agencies may differ. Generally, the processing time is shorter and the application is part of the process required to obtain a building permit.

The NPDES Storm Water Discharge General Permit #1200-C for construction activities does not authorize the excavation or fill in state waterways, including wetlands, or in any way replace the requirement for receiving authorization to do this type of work under Section 404 of the Clean Water Act.

The permit applicant may be the property owner, the consulting engineer, or the development contractor, provided the applicant is responsible for assuring that erosion and sediment control measures are implemented and maintained at the site. If permit conditions are violated, the DEQ will take enforcement action against the applicant.

PENNSYLVANIA

Permitting Authority

Pennsylvania is the NPDES Permitting Authority for all regulated stormwater discharges. The Pennsylvania Department of Environmental Protection (DEP) administers the stormwater permitting program.

Permit Requirements

A construction site owner/operator proposing stormwater discharges associated with construction activities must file an application at the earliest possible date but no later than 30 days prior to the proposed commencement of construction for general permits, and no later than 120 days for individual permits.

For purposes of this permit, the Erosion and Sediment Control Plan must contain BMPs designed to minimize point source discharges to surface waters, preserve the integrity of stream channels, and protect the physical, biological, and chemical qualities of the receiving water. An E&S Control Plan must be submitted to the Department or authorized County Conservation District along with the completed application.

If there is the potential for causing accidental pollution of air, land, or water, or for causing endangerment of public health and safety through accidental release of toxic,
hazardous, or other polluting materials, the applicant must develop a Preparedness, Prevention and Contingency (PPC) Plan.

RHODE ISLAND

Permitting Authority

Rhode Island is the NPDES Permitting Authority for all regulated stormwater discharges except those within Indian Country. The Rhode Island Department of Environmental Management (RIDEM) administers the General Permit Rhode Island Pollutant Discharge Elimination System (RIPDES) Storm Water Discharge Associated with Construction Activity program.
Permit Requirements

There are three situations in which a construction owner/operator may need to submit an NOI or both an NOI and an SWPPP to the RIDEM RIPDES program to obtain General Permit coverage. A copy of the SWPPP must be kept on-site for all construction sites at all times.

An NOI only must be submitted to RIPDES for (1) construction activities that disturb an area equal to or greater than 5 acres which receive a Coastal Resource Management Council (CRMC) permit or a Qualifying Local Program (QLP) approval, and an RIDEM Water Quality Certification (if applicable) and (2) construction activities that disturb an area equal to or greater than 1 acre but less than 5 acres that do not require a CRMC permit, QLP approval, RIDEM Water Quality Certification, or a RIDEM or Freshwater Wetlands permit.

Both an SWPPP and an NOI must be submitted to the Department for construction activities that disturb an area equal to or greater than 5 acres that do not require a CRMC permit, QLP approval, or a RIDEM Water Quality Certification.

In instances where only an NOI is required to be submitted to RIPDES, the NOI must contain a signed certification by a Registered Professional Engineer, a Soil and Water Conservation Society Certified Professional Soil Erosion and Sediment Control Specialist, or Registered Landscape Architect certifying that the SWPPP has been developed in accordance to requirements of the permit.

SOUTH CAROLINA

Permitting Authority

South Carolina is the NPDES Permitting Authority for all regulated stormwater discharges. The South Carolina Department of Health and Environmental Control (DHEC) has decided to reissue the existing NPDES general permit for construction activity to include small construction sites. This permit is being modeled after USEPA’s NPDES General Permit for Storm Water Discharges from Construction Activities (also known as the CGP).

The State Sediment, Erosion, and Stormwater Management Program (SESM) and the NPDES Stormwater Program overlap when the area disturbed is 5 acres or greater except for projects that are
exempt from one of the programs. Also, the State SESM Program has been delegated by law to DHEC's Office of Ocean and Coastal Resource Management (OCRM) in the eight coastal counties of South Carolina. The SESM program may also be delegated by the DHEC to other local entities upon their request for program delegation.

**Permit Requirements**

Under the SESM Program, an SWPPP must be prepared, submitted, and approved by the implementing agency before the land-disturbing activity is allowed. Under the NPDES Stormwater Program, the SWPPP must be submitted to DHEC's Industrial, Agricultural, and Stormwater Permitting Division for review and approval before general permit coverage can be granted. The land disturbing activity may begin after general permit coverage is granted.

South Carolina regulations require submission of site plans showing controls and a written approval on construction projects with more than 2-acre disturbances. The SWPPPs are reviewed and approved for sites that disturb more than 2 acres. Sites that disturb 2 acres or less must submit and implement a SWPPP, but they are exempt from the approval process once they have met the administrative requirements. Therefore, the State SESC Program does not regulate the same activities as the Stormwater Construction NPDES Permit Program. Those construction sites regulated by the NPDES program, but not the SESM program, must submit their SWPPP for review by the Bureau of Water in order to receive general NPDES permit coverage.

When a project falls under both programs, two reviews of the same SWPPP by different agencies could be required. However, the Department has merged these programs to the extent allowed by law to minimize this duplication of reviews. For those projects that fall under just the NPDES Stormwater Program, the Construction NPDES General Permit requires the submission and approval of the SWPPP before general permit coverage is granted. For those projects that fall under both the SESM Program and NPDES Stormwater, the approval of the SWPPP by the delegated entity (including OCRM) serves as an NOI for coverage under the general permit. Coverage is automatically granted 48 hours after the date of approval by the delegated entity unless the Department notifies the applicant otherwise. In these situations, the SWPPP is not submitted to the Bureau of Water's Industrial, Agricultural, and Stormwater Permitting Division for review and approval unless specifically requested.
Every construction site covered under the general permit must perform inspections. The results of these inspections are not routinely submitted to the Department but they must be kept on site by the permittee.

SOUTH DAKOTA

Permitting Authority

South Dakota is the NPDES Permitting Authority for all regulated stormwater discharges except those within Indian Country. The South Dakota Department of Environmental and Natural Resources (DENR) administers the General Permit for Storm Water Discharges Associated With Construction Activities.

Any construction activity that disturbs one or more acres must have coverage under a storm water permit. Any sites that are part of a larger plan or sale may also need a permit, if the total plan meets the acreage requirement. Construction activities include clearing, grading, or excavation; road building; construction of residential, commercial, and industrial buildings; installing pipelines, cable lines, and telephone lines; and demolition activities.

Permit Requirements

To apply for an individual permit or for coverage under a statewide general permit, the operator must file an application with the Department of Environment and Natural Resources prior to commencement of construction activities.

In addition to these statewide rules, operators may be required to meet additional local stormwater and erosion control regulations. Check with city or county government to determine if additional local rules apply to the construction project.

An NOI form must be submitted to DENR to request coverage under this general permit for storm water discharges from construction sites. This information must be submitted at least 15 days prior to when the operator commences work at the site.

The SWPPP must be developed prior to the start of construction and implemented for all construction activity.
Permittees wishing to terminate coverage under this permit must submit an NOT within 30 days after the conditions of the permit have been met.

**TENNESSEE**

**Permitting Authority**

Tennessee is the NPDES Permitting Authority for all regulated stormwater discharges except those within Indian Country. The Tennessee Department of Environment and Conservation (TDEC)
administers Tennessee General Permit Number TNR10-0000, Storm Water Discharges from Construction Activities.

**Permit Requirements**

As of 10 March 2003, in order to discharge stormwater from a construction site, all construction projects that disturb 1 acre or more of land must have either an individual stormwater permit or coverage under one of Tennessee’s general permits.

Disturbance includes, but is not limited to, soil disturbance, clearing, grading, and excavation. Operators of sites disturbing less than 1 acre are also required to obtain a permit if their activity is part of a “larger common plan of development or sale” with a planned disturbance of 1 acre or greater.

To apply for an individual permit or for coverage under a statewide general permit, the operator must file an application with the Department of Environment and Conservation prior to commencement of construction activities.

In addition to these statewide rules, operators may be required to meet additional local stormwater and erosion control regulations. Check with city or county government to determine if additional local rules apply to the construction project.

Operators of construction sites involving clearing, grading, or excavation that results in an area of disturbance of 1 or more acres, and activities that result in the disturbance of less than 1 acre if it is part of a larger common plan of development or sale. Permitted activities have included housing subdivisions, commercial and industrial buildings, golf courses, utility lines, sewage treatment plants, and roads. Various land clearing activities such as borrow pits for fill material have also been covered under this general permit.

A construction site owner/operator must submit the Division of Water Pollution Control NOI under the General Permit for Construction Storm Water form to the appropriate Environmental Assistance Center. NOIs must be submitted 30 days prior to the commencement of construction.

Applicants must prepare a pollution prevention plan prior to submitting the NOI.

Operators wishing to terminate coverage must submit an NOT after final stabilization of the site.

TEXAS

Permitting Authority

Texas is the NPDES Permitting Authority for all regulated stormwater discharges except those within Indian Country and for specific discharges including activities associated with the exploration, development, or production of oil or gas or geothermal resources, including transportation of crude oil or natural gas by pipeline.

The Texas Pollutant Discharge Elimination System (TPDES) program implements the Federal NPDES program in the State of Texas. USEPA Region 6 (located in Dallas) has administered the Phase I storm water general permit for construction activities
disturbing 5 or more acres within the State of Texas until the TPDES permit had been issued.

On 5 March 2003, the Texas Commission on Environmental Quality (TCEQ) became the permitting authority for these discharges. General Permit Number TXR-150000 covers storm water discharges from construction activities that disturb at least 1 acre and less than 5 acres.

**Permit Requirements**

For construction projects that will disturb 1 or more acres but less than 5 acres, including the larger common plan of development, a construction owner/operator must develop and implement an SWP3. Additionally, the permittee must complete and post a site notice.

Before construction begins, if the site qualifies, a construction owner/operator may submit a Low Rainfall Erosivity Waiver Form.

For construction projects that will disturb 5 or more acres, the construction owner/operator must submit an NOI to the TCEQ prior to the commencement of construction. An SWP3 must be developed and implemented to be in compliance with this permit.

The permittee must submit an NOT once the site has reached final stabilization as defined in the permit.

UTAH

Permitting Authority

Utah is the NPDES Permitting Authority for all regulated
stormwater discharges except those within Indian Country. For
construction stormwater discharges on Indian country within the
State of Utah, except Goshute and Navajo Reservation lands (see
Region 9), USEPA is the permitting authority. The State of Utah
Permit Number is UTR10000I.
The Utah Department of Environmental Quality, Division of Water Quality, administers the Utah Pollution Discharge Elimination System (UPDES) Storm Water General Permit for Construction Activities. The Permit Number is UTR100000.

**Permit Requirements**

Construction projects that disturb 5 acres or more (large construction) must be covered under the general construction permit. Coverage under this permit must be obtained and erosion and sediment controls must be installed prior to any grading activities at a site, which will disturb 5 acres or more per common plan.

Construction projects that disturb greater than or equal to 1 acre and less than 5 acres (small construction) must be covered under the general construction permit. Small construction sites may qualify for a waiver from the permit based on low erosivity at the site. A certification form must be filled out and sent to the Division of Water Quality to obtain this waiver.

A Stormwater Pollution Prevention Plan must be developed prior to submitting the NOI for the general permit.

VERMONT

Permitting Authority

Vermont is the NPDES Permitting Authority for all regulated stormwater discharges except Federal facilities, which are regulated by the USEPA.

Permit Requirements

The Department has elected to postpone the issuance of a general permit for small construction sites until the fall of 2004, making it available to cover projects undertaken during the 2005 construction season. The general permit was placed on public notice in July 2003 and has been revised. Before it is issued, it will be sent to USEPA for final review. To be notified of permit adoption through the Stormwater Notification List, please contact Dennis Works at http://www.anr.state.vt.us/dec/waterq/contacts.htm#dennisw.
Construction projects that are scheduled to begin before the final permit is issued may proceed as scheduled. The project owners must notify the Department that the project is commencing so that the Department may notify when the permit has been adopted. Once the final permit is issued, coverage must be sought through submittal of an NOI. An erosion prevention and sediment control plan must be developed and used during the construction to protect water quality.

For large construction activities, construction may commence once the signed NOI is posted.

**Construction General Permits**

- General Stormwater Permit for Large Construction Sites (Phase I):  

- The Department has finalized the small construction site permit and is awaiting administrative approval from the Agency of Natural Resources and USEPA. If you wish to be notified of permit adoption through the Stormwater Notification List, please contact Stephanie Lanphear:  
  [http://www.anr.state.vt.us/dec/waterq/contacts.htm#stephl](http://www.anr.state.vt.us/dec/waterq/contacts.htm#stephl).

VIRGINIA

Permitting Authority

Virginia is the NPDES Permitting Authority for all regulated stormwater discharges. The Virginia Department of Environmental Quality (DEQ) administers the Federal program as the Virginia Pollutant Discharge Elimination System (VPDES) permit program, which is authorized under the State Water Control Law. The permit is Permit Number VAR10, VPDES General Permit for Storm Water Discharges from Construction Activities.

Permit Requirements

DEQ's construction site stormwater permits are based upon USEPA's construction stormwater general permit, and require construction site operators to develop and implement an SWPPP that uses BMPs for erosion and sediment control at the construction site.

During the development of DEQ's construction permit requirements, specific USEPA erosion and sediment control permit requirements were modified to make them as consistent as possible with the Department of Conservation and Recreation's (DCR’s) erosion and sediment control requirements. Permits for construction sites do not typically contain monitoring
requirements; however, they do require the operator to regularly inspect stormwater discharges from the site to ensure that the BMPs are controlling the discharge of pollutants to the maximum extent practicable, and are meeting water quality standards.

If a construction site has an approved Erosion and Sediment Control (ESC) plan from the locality or from DCR, a pollution prevention plan must still be developed, but DEQ allows construction site owners to satisfy identical pollution prevention plan requirements by simply referencing the approved ESC plan. The permit pollution prevention plan requires the operator to manage other wastes on site, such as building materials, garbage and debris, and to have controls to minimize the exposure of these materials to storm water, and to minimize the discharge of pollutants to State waters.

DEQ does not specify which BMPs must be implemented at a construction site, but leaves that choice up to the permittee. DCR and the Chesapeake Bay Local Assistance Department (CBLAD) have developed a consistent BMP criteria that is appropriate to use, but is not a DEQ permit requirement.

A complete general permit Registration Statement must be submitted prior to commencing construction for construction storm water general permits, or before the expiration date of an existing general permit. The DEQ regional office will send the applicant a copy of the general permit and will indicate the date of coverage.

WASHINGTON

Permitting Authority

Washington is the NPDES Permitting Authority for all regulated stormwater discharges except those within Indian Country and Federal facilities.

Permit Requirements

A permit is required for all soil-disturbing activities (including grading, stump removal, demolition), where 5 or more acres will be disturbed, and have a discharge of stormwater to a receiving water (e.g., wetlands, creeks, unnamed creeks, rivers, marine waters, ditches, estuaries), and/or storm drains that discharge to a receiving water. Permit coverage is also required if all stormwater is retained on site, but detention facilities need to be constructed.

The permit for 1–5 acre sites was not available in time to meet USEPA’s Phase II deadline of 10 March 2003. The Department of Ecology intends to have permit coverage available in 2004.
Construction site operators of 1–5 acre sites seeking coverage under a general permit during this interim time period may seek coverage under the current construction stormwater general permit.

In order to operate under a general permit, an NOI must be submitted to the Washington Department of Ecology, Stormwater Unit, on or before the date of the first public notice and at least 38 days prior to the start of construction activities. Ecology cannot grant permit coverage until 31 days after the date of the second Public Notice.

The notice must be published at least once each week for 2 consecutive weeks, in a single newspaper, which has general circulation in the county in which the construction is to take place. Ecology is no longer requiring the submittal of the affidavit of publication. However, a typed copy of what will be submitted to the newspaper must be sent along with the NOI. The dates that the first and second public notices will run and the name of the newspaper in which the public notices will appear must also be provided.

An NOI is deemed complete only after the following conditions are met: a final State Environmental Policy Act (SEPA) determination has been made; the applicant has certified that a SWPPP will be developed prior to the start of construction; the 30-day public comment period has been satisfied, and all other NOI information has been supplied.

Coverage will begin from the date of Ecology's written authorization or will automatically commence on the date specified in Ecology’s letter.

Construction activities that discharge stormwater to a storm drain operated by any of the following municipalities must also submit a copy of the NOI to the municipality: Seattle, King County, Snohomish County, Tacoma, Pierce County, Clark County, Spokane County, and Washington Department of Transportation.

On 29 August 2001, the Pollution Control Hearings Board issued a partial stay of the construction stormwater general permit. This partial stay applied to waters listed under Section 303(d) of the Clean Water Act and waters subject to TMDL determinations. The waters and conditions identified by the Department of Ecology subject to the order granting partial stay construction stormwater general permit are listed in [http://www.ecy.wa.gov/programs/wq/stormwater/construction/const_stay.html](http://www.ecy.wa.gov/programs/wq/stormwater/construction/const_stay.html).

WEST VIRGINIA

Permitting Authority

West Virginia is the NPDES Permitting Authority for all regulated stormwater discharges.

The Division of Water Resources developed and issued a General WV/NPDES Water Pollution Control Permit to regulate sediment laden stormwater flowing into the waters of the State from discharges associated with construction activities. This General Permit was issued on 5 November 2002, became effective on 5 December 1998, and will expire on 4 December 2007.

Permit Requirements

Any person proposing a construction activity, 3 acres or greater of land disturbance in size, must submit a site registration application form 45 days prior to commencing the operation. For projects that will disturb between 1 acre and less than 3 acres, the responsible party must submit an NOI at least 10 days prior to starting earth disturbing activities.
When the construction activity is owned by one person but operated by another, it is the responsibility of the owner (developer) to obtain the permit.

When the construction activity is completed and all disturbed areas are stabilized, the responsible party must submit an NOT in order to end coverage under the General Permit.

WISCONSIN

Permitting Authority

Wisconsin is the NPDES Permitting Authority for all regulated stormwater discharges except those within Indian Country.

Permit Requirements

Although the web sites for the general permits and application form listed below apply to large construction activities, Wisconsin is applying these rules to small construction activities (1 to 5 acres) as of 1 August 2004. Wisconsin regulations do not allow for either the R-value or the TMDL exemption analysis.

Disturbance includes, but is not limited to, soil disturbance, clearing, grading, and excavation. Operators of sites disturbing less than 1 acre are also required to obtain a permit if their activity is part of a “larger common plan of development or sale” with a planned disturbance of 1 acre or greater.

To apply for an individual permit or for coverage under a statewide general permit, the operator must file an application with the Department of Natural Resources prior to commencement of construction activities.
In addition to these statewide rules, operators may be required to meet additional local stormwater and erosion control regulations. Check with city or county government to determine if additional local rules apply to the construction project.

  (Text is not available on-line; however, it can be ordered by mail or on-line.)

**WYOMING**

**Permitting Authority**

Wyoming is the NPDES Permitting Authority for all regulated stormwater discharges except those within Indian Country. Wyoming has two NPDES permits, large construction (land disturbance of 5 acres or more) and small construction (land disturbance of at least 1 acre but less than 5 acres.) For a large construction general permit the five acres of disturbance does not have to be contiguous.

**Permit Requirements**

The small construction general permit does not require an NOI or application. A construction site is considered authorized under the permit when all applicable provisions of the permit are met. For example, a small construction site owner/operator must develop and implement an SWPPP. The construction site operator must conduct and document that required periodic inspections of BMPs are implemented. In other respects, this permit is very similar to the permit for large construction activities.

USEPA has postponed stormwater permit requirements for stormwater discharges associated with small construction activities from oil and gas exploration, production, processing, and treatment operations or transmission facilities until 10 March 2005. The postponement is effective in Wyoming. The postponement affects only small construction activities from oil- and gas-related construction. Oil and gas construction
activities that are part of a larger common plan of development or sale that will disturb 5 or more acres is considered a large construction activity and does not qualify for the postponement.

Disturbance includes, but is not limited to, soil disturbance, clearing, grading, and excavation. Operators of sites disturbing less than 1 acre are also required to obtain a permit if their activity is part of a “larger common plan of development or sale” with a planned disturbance of 1 acre or greater.

To apply for an individual permit or for coverage under a statewide general permit, the operator must file an application with the Department of Natural Resources prior to commencement of construction activities.

In addition to these statewide rules, operators may be required to meet additional local stormwater and erosion control regulations. Check with your city or county government to determine if additional local rules apply to your construction project.

Appendix B: Federal Stormwater Regulations for Construction Sites

The Federal NPDES Construction General Permit (CGP) for discharges from large and small construction activities became effective on 1 July 2003 and expires at midnight 1 July 2008. Discharge from a construction activity is authorized 7 calendar days after acknowledgement or receipt of the completed Notice of Intent (NOI).

The CGP allows specific non-stormwater discharges including:

1. Discharges from fire-fighting activities;
2. Fire hydrant flushings;
3. Waters used to wash vehicles where detergents are not used;
4. Water used to control dust in accordance with Subpart 3.4.G;
5. Potable water including uncontaminated water line flushings;
6. Routine external building wash down that does not use detergents;
7. Pavement wash waters where spills or leaks of toxic or hazardous materials have not occurred (unless all spilled material has been removed) and where detergents are not used;
8. Uncontaminated air conditioning or compressor condensate;
9. Uncontaminated ground water or spring water;
10. Foundation or footing drains where flows are not contaminated with process materials such as solvents;
11. Uncontaminated excavation dewatering;
12. Landscape irrigation.

The CGP does not authorize the following discharges:

1. Post construction dischargers after the construction activities have been completed and the site has achieved final stabilization;
2. Discharges mixed with non-stormwater;
3. Discharged associated with individual permit;

4. Discharges that have the reasonable potential to cause, or contribute, to an excursion above a water quality standard;

5. Discharges into receiving waters with approved Total Maximum Daily Load (TMDL);

6. Discharges that jeopardize or ‘take’ of federally listed endangered or threatened species;

7. Discharges that jeopardize the protection of historic properties or places;

The following information must be provided on the NOI form:

1. The applicable permit number for which coverage is requested;

2. Operator name, address, telephone number, and Employer Identification Number (EIN) as established by the U.S. Internal Revenue Service;

3. Project/site name, address, county or similar governmental subdivision, and latitude/longitude of the construction project or site;

4. Whether the site is located in Indian Country and, if so, the name of the Reservation, if applicable;

5. Whether the Stormwater Pollution Prevention Plan (SWPPP) has been prepared in advance of filing of this NOI and the location where the applicable SWPPP may be viewed (information on the SWPPP and required contents are found in Appendix A);

6. Name of the water(s) of the United States into which the site discharges;

7. Indication whether your discharge is consistent with the assumptions and requirements of applicable USEPA-approved or established TMDLs;

8. Estimated dates of commencement of construction activity and final stabilization (i.e., project start and completion dates);

9. Total acreage (to the nearest quarter acre) to be disturbed for which permit coverage is requested;

10. Whether any federally listed threatened or endangered species, or federally-designated critical habitat are in the
project area to be covered by this permit, and the basis for certifying eligibility for permit coverage based on the instructions in Appendix C;

11. A certification statement signed and dated by an authorized representative as defined in Appendix G, Section 11, and the name and title of that authorized representative.

An SWPPP must be prepared prior to submission of an NOI as stated above. At least one SWPPP must be developed for each construction project. A SWPPP must contain the following:

- description of the construction sites and activities;
- controls to reduce pollutants;
- non-stormwater discharge management controls;
- document of permit eligibility related to endangered species;
- copies of the permit, the signed and certified NOI form that was submitted, and the letter notifying of the administrative receipt of the complete NOI;
- applicable State, Tribal, or local programs;
- inspection;
- update plan requirements;
- plan review;
- management practices;
- documentation of permit eligibility related to TMDLs.
Appendix C: Corps Divisions Stormwater Regulations for Construction Sites

Introduction

Corps districts were contacted for information regarding the language, model phrases or regulations specified in construction contracts regarding stormwater discharges at construction sites. Responding Districts offered the following points of contact, information, and documents:

GREAT LAKES AND OHIO RIVER DIVISION (CELRD)

Buffalo District (CELRB)

Point of Contact:
Michael F. Barton
Team Leader, General Design Section
Buffalo District Corps of Engineers
Phone: (716) 879-4231
FAX: (716) 879-4355
Email: michael.f.barton@usace.army.mil

Buffalo District does not do military construction. The District has stormwater requirements for civil works construction contracts. Contract language comes from the Unified Facilities Guide Specifications. For installation of stormwater pipe, manholes, drainage structures, etc., we use 02630. For prevention of damage and containment of stormwater during construction we use 01356A. There also might be some information in 01355A and 02370A that can help you.

Chicago District (CELRC)

Point of Contact:
Casey L. Pittman
Environmental Engineer
U.S. Army Corps of Engineers
111 North Canal Street, Suite 600
Chicago, Illinois 60606-5506
Phone: 312-846-5506
Email: Casey.L.Pittman@lrc02.usace.army.mil
As we discussed, attached are the standard specifications that Chicago uses to address environmental protection measures during construction. We have taken the Army Guide Specification 01355 and modified it with state specific requirements. Within each file are highlighted excerpts that have the specific requirements (for Indiana and Illinois) related to stormwater construction site runoff and permitting (email from Casey L. Pittman) Relevant sections are highlighted in the attachments.

Detroit District (CELRE)

Point of Contact – No information.

Huntington District (CELRH)

Point of Contact:
Joseph M. McCallister, P.E.
Civil Engineer
Civil Design Section, Design Branch
Engineering and Construction Division
U.S. Army Corps of Engineers
Huntington District
Phone: (304) 399-5969
FAX: (304) 399-5209
Email: Joseph.M.Mccallister@Lrh01.usace.army.mil

Here are the standard Stormwater related specifications that are included in the contract documents. Section 01355 is called "Environmental Protection," and it covers some water-related issues. Section 01356 is a section called "Stormwater Pollution Prevention Measures," and it covers silt checks and silt fence. Section 02318 is a section specific to one of Joseph McCallister’s recent projects and it covers a Sediment Pond - but this pond was required by permit; therefore, this is not one of their "standard" sections.
Louisville District (CELRL)
Point of Contact – No information.

Nashville District (CELRN)
Point of Contact – No information.

Pittsburgh District (CELRP)
Point of Contact – No information.

MISSISSIPPI VALLEY DIVISION (CEMVD)

Memphis District (CEMVM)
Point of Contact – No information.

New Orleans District (CEMVN)
Point of Contact:
Stanley B. Green
Project Manager
Telephone: (504) 862-1486
Email: Stanley.B.Green@MVNO2.USACE.ARMY.MIL

Stan is Senior Project Manager of the SELA project ($700 million project). Project Fact Sheet at:

The attached portable document format (PDF) file contains the entire set of specifications for a recent contract. The relevant section begins on file page 235. Stormwater General Permit for Construction Activities (Permit No. LAR100000 Authorization to Discharge under the Louisiana Pollutant Discharge Elimination System).
Rock Island District (CEMVR)

Point of Contact:
Perry A. Hubert MVR
Telephone: (309) 794-5424
Email: Perry.A.Hubert@mvr02.usace.army.mil

St. Louis District (CEMVS)

Point of Contact:
Mike Rector

Attached is a typical Environmental Protection section of the specifications that addresses environmental protection in general, and stormwater in particular, in various places.

St. Paul District (CEMVP)

Point of Contact:
Douglas Crum, P.E.
Cost Estimating and Specifications Section
St. Paul District

St. Paul District is a civil works district. The District uses a local master spec for NPDES permits. The District feels the contractual responsibilities to meet state NPDES requirements are important and they are not addressed in the guide specs. UFGS 01356 only touches on some random highlights of what is covered in the state permits. Attached is a copy of the District master for NPDES permits. The District attaches the State permits in the construction contracts (Minnesota is included).
Vicksburg District (CEMVK)

Point of Contact:
David L. Wallace, P.E.
Environmental Engineer
U.S. Army Corps of Engineers
4155 Clay Street
Vicksburg, MS 39183
Phone: (601) 631-5981
FAX: (601) 631-7231
Email: David.L.Wallace@mvk02.usace.army.mil

The attached guide specs are used by the Vicksburg District designer as a guide for implementing the particular State's requirements involving discharges from construction projects. The Specifications 01354 and 01356 have been adapted from the Unified Guide Specifications listed on the second row to form our local (MVK) guide specs.

Email: James.B.Fogelsong@nw01.usace.army.mil

01355: see para 3.3.3
01565: see para 3.1.2 breaks erosion control into three phases so interest in the requirement does not lag.
01565 exhibit B: helps our contractor in a general way.

In addition, we usually have three or four contract drawings detailing site-specific BMP's for the initial SWPPP plan.

The Construction General Permit (CGP) also allows certain non-stormwater discharges, provided the non-stormwater component of the discharge is in compliance with Subpart 3.5 (Non-Storm Water Discharge Management).

B. Allowable Non-Storm Water Discharges

You are authorized for the following non-storm water discharges, provided the non-storm water component of the discharge is in compliance with Subpart 3.5 (Non-Storm Water Discharge Management):

1. Discharges from fire-fighting activities;

2. Fire hydrant flushings;

3. Waters used to wash vehicles where detergents are not used.

4. Water used to control dust in accordance with Subpart 3.4.G;

5. Potable water including uncontaminated water line flushings;

6. Routine external building wash down that does not use detergents;

7. Pavement wash waters where spills or leaks of toxic or hazardous materials have not occurred (unless all spilled material has been removed) and where detergents are not used;

8. Uncontaminated air conditioning or compressor condensate;

9. Uncontaminated ground water or spring water;
10. Foundation or footing drains where flows are not contaminated with process materials such as solvents;

11. Uncontaminated excavation dewatering.

12. Landscape irrigation.

From CGP, para 1.3.C.4, note the last sentence that allows non-stormwater discharges of process water under the CGP:

4. This permit does not authorize discharges that USEPA, prior to authorization under this permit, determines will cause, have the reasonable potential to cause, or contribute to an excursion above any applicable water quality standard. Where such a determination is made prior to authorization, USEPA may notify you that an individual permit application is necessary in accordance with Subpart 4.2. However, USEPA may authorize your coverage under this permit after you have included appropriate controls and implementation procedures in your SWPPP designed to bring your discharge into compliance with water quality standards.

Seattle District (CENWS)

Points of Contact:
Jill M. Gough
Civil Engineer

Carl V. Steiger
Specification Section
Telephone: (206) 764-6554
Email: Carl.V.Steiger@NWS02.usace.army.mil

We do have stormwater specifications that deal with compliance and plans the contractor is required to submit before beginning construction. The specifications are 01355 ENVIRONMENTAL PROTECTION and 01356 STORMWATER POLLUTION PREVENTION MEASURES. I believe these have been specifically edited for Fort Lewis. We are currently using these specifications for the FY05 Whole
Barracks Renewal at Fort Lewis. They are not yet in final form, and we have not received comment from Fort Lewis PW's Environmental Group (from Jill Gough).

Here's what we have in our "Fort Lewis" (01355 and 01356) master folder, but I believe they are identical to the standard UFGS (from Carl Steiger).

Sacramento District (CESPK)

Point of Contact:
John "J.J." Baum P.E.
Environmental Engineer
U.S. Army Corps of Engineers, Sacramento District
Environmental Chemistry Section
1325 J. Street
Attached are the documents and links that we discussed over the phone. The first attachment is a copy of the 01356 specifications in specs intact format (you will need specs intact installed to open it). This is generally included in all construction specifications on sites disturbing greater than 1 acre of land.

01356B.sec (40 KB)

The second is an older draft of an in house instruction for handling storm water permitting issues in the district. It needs to be updated before it can be distributed for use, but you may find it interesting as a reference.

Draft of _06-01-03.doc (132)

The first link below is to the web page for the California State General Storm Water Permit for Construction. Since most of our work is in California, and the restrictions are tighter, it is the guidance that we most often try to meet.

http://www.swrcb.ca.gov/stormwtr/construction.html

The second link is to a great reference document prepared by a non profit agency with the approval of the California State Water Quality Control Board about managing storm water. I generally use their construction handbook as a reference due to them setting the standard for what should be in a Storm Water Pollution Prevention Plan. Their site also has excellent reference materials for the management of storm water for industrial sites.
