McGuire Air Force Base
architectural compatibility plan
Vision

An Architecture of Community is the long-range vision for McGuire Air Force Base. This is a vision of excellence displayed in a high-quality corporate image for facilities, the landscape, and the environment. It is expressive of the architectural character, climatic factors, and cultural influences typically associated with the Garden State of New Jersey.

Architectural compatibility and Community can be achieved by understanding the vision for the base and by refining its design vocabulary. Successful examples of high-quality facilities, landscaping, and streetscapes are presented in this Architectural Compatibility Plan (ACP). These examples depict the design standards that will ensure compatibility and achieve the vision of excellence.

introduction

The Architectural Compatibility Plan (ACP) defines a clear design vocabulary to be used throughout the base, providing specific standards for all aspects of exterior design. Compatible architecture is accomplished with similar buildings, using common design forms, details, materials, site features, and streetscapes.

Quality and compatibility are achieved through creating a unified visual environment that is based on an Architecture of Community, similar to a campus or small town. The principal design goal is to direct development at McGuire AFB toward a livable, attractive, and cohesive installation.

The ACP provides the design standards that will help to build compatible facilities and a quality environment. Implementation of the standards will result in the creation of community.
Purpose

The purpose of the ACP is to define design standards for buildings, site development, and streetscapes that serve to integrate the visual character throughout the base.

The ACP will help ensure consistent quality design decisions by commanders, planners, architects, engineers, maintenance staff, and residents. It promotes clear, concise communication between the McGuire AFB personnel and design professionals.

This plan applies to self-help initiatives, small projects, and operations and maintenance activities as well as large construction efforts.

The ACP is referenced from and supports the McGuire AFB General Plan as a key component plan.

How to Use This Plan

The ACP defines three architectural settings: Basewide, Flightline/Industrial, and Family Housing (see map below).

General and specific design standards for all buildings are included in the Basewide setting. Basewide standards shall be applied to all projects. When a project is located in the Flightline/Industrial, National Guard Campus or Family Housing setting more specific standards from those Sections of the ACP shall be applied.

The Implementation Section of the ACP outlines key elements to ensure success in designing and constructing excellent facilities. It discusses the traditional design process, highlights the importance of site analysis, and describes the role of the Architectural Compatibility Review Board (ACRB). The implementation section defines methods to facilitate the coordination and approval of design submittals.

Finally, the Appendices provide additional information including an index, a list of building materials, site amenities, colors, and landscape materials; and a checklist for the ACPB and project personnel. Use the Appendices in conjunction with the general text of the ACP as a quick reference to specific materials and color specifications.

A poster is available upon request that displays photographic examples of the McGuire AFB community.
Design standards for buildings and supporting elements are outlined in this section. These standards encourage architectural compatibility using common forms, materials, colors, and architectural details.

The first priority is to achieve architectural compatibility for McGuire Air Force Base as a whole. The second priority is compatibility within an architectural setting or sub-area. Outstanding designs for individual buildings or facilities are the third priority. The goal is to design excellent facilities that satisfy all of these priorities.
McGuire AFB has a foundation for architectural unity. The existing architecture depicts a predominant materials palette and a consistency of material detailing. The following design standards are applicable to the entire installation, to both host and tenant organizations.

Site planning and site development issues contribute significantly to the architectural context. Building setbacks and the scale and definition of space are as fundamental to creating architectural compatibility as consistent facade designs. Develop exterior spaces to promote pedestrian use and activity and to connect buildings and the landscape. Use the landscape with other visual elements to create greater continuity.

^ BUILDINGS

Achieving compatibility among buildings is essential in creating an Architecture of Community. Develop facilities with a common design theme and character to enhance architectural compatibility. Unity is the goal, not conformity.

**Style / Form**

- Emphasize horizontal proportions on building elements.
- Rectangular elements are the standard for major building masses.
- Use clean, simple, contemporary forms and avoid curves or angular elements in plan.
- Develop a strong relationship between buildings and exterior spaces.
- Articulate building facades to create areas of shade and shadow.
- Use brick with precast accents in walls combined with sloped metal roofs and modest eaves.

**Scale / Massing**

- Reduce the monumental appearance of large structures by developing smaller massing components.
- Combine functions whenever possible to avoid a proliferation of small independent structures.
- Break up the mass of large structures to allow for slope roofs to the maximum extent.

**Existing Buildings**

- Match the existing materials for addition / alteration projects unless a significant change to the exterior envelope is included.
- Whenever possible bring existing facilities into compliance.
WALL SYSTEMS

Walls provide the principal details and architectural features for buildings. These contribute significantly to the character of the base. Limit the palette of materials that is to be used. Consistent use of colors and materials will bind the base together and reduce visual clutter caused by too much diversity.

Brick

- Use 4x4x8 closure face brick in a running bond pattern with tooled concave joints. Standard size brick is permitted with ACRB approval.
- Header, rowlock, and soldier coursing with corbeling or other accents is encouraged.
- Dark brown brick is the standard. Red brick is permitted in the special use area near the Base Chapel with ACRB approval.
- Brick may be used when appropriate for lintels, sills, or arches. Detailing should emulate bearing wall construction.
- Conceal expansion joints with downspouts or locate them at transitions in the wall such as at pilasters or reveals.
- Use dark brown Portland cement mortar.
- Efflorescence in masonry work is unacceptable. Measures must be provided to prevent it.

Architectural Precast

- Precast is appropriate for lintels, sills, belt courses, and friezes.
- Other facade elements made of precast should be used sparingly to ensure that brick remains the prominent material.
- Dark buff limestone is the standard color for precast concrete.
- Detailed designs and patterns may be cast into the pieces to create an individual character for a single facility or complex.

architectural compatibility plan - McGuire Air Force Base
Other Materials

- Limit pre-finished metal wall panels to large industrial / flightline facilities and special applications only with ACRB approval.
- Factory finish all exposed metals with a powder-coat application such as Kynar 500.
- A traditional three-coat stucco system is allowed with ACRB approval.
- Scratch and Brown coats should be cement-based mixes with the finish coat being a synthetic-based plaster.
- Dark buff limestone is the standard color for stucco.
- Use stucco as an accent similar to precast.
- Sand finish is the standard.
- A synthetic hard-coat may be used over the scratch and brown coats for the final finish.
- Joint sealants shall match the color of the darker adjacent surfaces. When adjacent surfaces are the same color use a darker joint sealant in the same color.

Accents / Detailing

- All facilities shall demonstrate a balance in detailing appropriate for their function and setting.
- Architectural accents such as belt courses, pilasters, and columns or other contextual details are encouraged to break up flat facades and add visual interest.

Wall Components

- Organize and coordinate placement of all mechanical, electrical, lighting, communication, and other building components, including downspouts, into the overall architectural design.
- Do not expose conduits, cables, and piping on walls.
- All gas meters, fire bells, vents, louvers, and electrical / communication boxes shall match the wall surface color on which the equipment is mounted.
ROOF SYSTEMS

Roof color, material, and form are prominent features and play a significant role in architectural compatibility. Ensure these are comparable in shape, slope, material, and color throughout the building.

Configuration

- Use hipped roofs with pitches between 3:12 and 5:12 as the primary building form for all facility types.
- Gabled end walls may be used to accent entries.
- Gabled end walls may be used with ACRB approval.
- Use overhangs proportional to the size and height of the building.
- Low-sloped roofs are only allowed for larger structures in combination with hipped roofs, or to match existing conditions on renovation/alteration projects.
- Protect entrances from falling snow and ice. Use snow guards at entrances and when sidewalks are next to a building.

Materials and Color

- Use factory-finished, standing seam metal roofing on sloped roofs. 12” to 19” wide panels with a 2-1/2” raised standing seam is the standard.
- Roofing shall be dark brown. Soffits shall match the roof color.
- Roof flashing shall match the roof material and color.
- Stepped flashing at the intersection of roofs and walls shall match wall color.
- Membrane roofing for low-sloped roofs may only be used with ACRB approval. A warranted minimum slope of 1/2:12 is required.
Fascias, Gutters, and Downspouts
- Incorporate continuous metal fascias that are proportional to match the scale of the roof. General height is 8'-12" for all sloped roofs.
- Do not use turn-down standing seam metal fascias.
- Fascia finish shall match the roof color when occurring with metal roofing.
- Provide dark brown gutters and downspouts for all brick wall systems and integrate with architectural details.
- Gutters on sloped roofs are encouraged and shall be factory finished to match the roof color.
- Interior roof drains and open scuppers are allowed only with approval of the ACRB. Do not use internal gutters.
- Provide concrete splash blocks at grade draining or connected directly to the storm drainage system.

Roof Vents and Elements
- Minimize, consolidate, and organize roof penetrations on the least visible side of the building.
- Ridge vents are preferred. Louver grilles at gabled end walls are acceptable.
- PVC pipes and other roof elements must be finished to match the roof color.
- Do not use rooftop mechanical units. When required, minimize the negative visual effects with screening to match the roof color.
- Consider the use of dormer vents to conceal and screen exhausts.
- Make mechanical vent sizes and shapes consistent with architectural elements.
- Avoid roof-mounted antennas.
ENTRANCES

Entrances act as a transitional element from exterior to interior and provide opportunities to create a focal point on a façade. They establish a user’s first impression and delineate the importance of the building by the size and architectural detailing of the entrance structure.

General

- Ensure the building entrance is clearly visible and highlighted as a prominent feature.
- Projected entrance features with gabled or hipped roof forms are preferred.
- Use enclosed vestibules and weather-protected transition spaces at entrances.
- Integrate hand-capped ramps.

Primary Entrances

- Provide an overhead enclosure for weather protection.
- Use accent pavers in approach walkways or at entry plazas.
- Locate newspaper, vending machines and similar elements out of view to avoid visual clutter.

Secondary Entrances

- Reflect the character of the primary entrances but to a lesser extent.
- Recessed entries are acceptable to provide areas of shade and weather protection.

Service Entrances and Emergency Egress

- Minimize visual impact with proper siding and access.
- Provide unobtrusive service entrances that are physically and visually separated from primary and secondary entrances.
- Incorporate egress structures such as stair towers into design.
- Use landscaping and screen walls to screen and separate loading docks.
- Do not use canopies at emergency egress doorways.

Drop-offs and Porches

- Limit to special, high-profile facilities and embellish corresponding amenities, design accents, and landscaping.
- Design as an integral part of the building entrance using the same style, form, and materials.

Handrails

- Finish dark brown with a powder-coated surface to match roof color.
- Integrate handrail designs with the facility design.

Plazas and Courtyards

- The use of plazas and courtyards is encouraged at primary and secondary entries.
- Use concrete surfacing with special joint patterns and/or brick or similarly colored concrete accent pavers with ACRE approval.
- Incorporate landscaping and lighting into the design.
WINDOWS AND DOORS

Windows and doors create a compliment in the facade and must be considered as individual details and for overall arrangement order and scale.

Openings:
- Use window type, size, placement, and mullion pattern to emphasize the overall architectural design.
- Use regularly spaced windows to establish contextual rhythms.
- Set windows back at least 3’ from the building facade.
- Incorporate operable windows with screens where possible.
- Transom windows/elements above doors/windows are encouraged.

Doors and Frames:
- Use anodized dark brown aluminum storefront systems with thermal-break construction.
- Storefront door and frame colors shall match and be anodized dark brown.
- Limit hollow metal frames to security doors, utility rooms, and utility sites.
- All secondary use and service doors and frames shall be dark brown on brick walls and match adjacent surfaces on painted facades.
- Seals are applied adjacent to windows and doors shall match frame color.

Glazing:
- Use bronze tinted, dual-pane insulated glass.
- Mirrored, spandrel, glass block, and plastic glazing shall not be used.
- Translucent insulated panels are acceptable. Normally match the color of the wall.

Clerestories and Skylights:
- Develop clerestories or low-profile skylights integrally with the building design.
- Clerestory windows shall be either glass or translucent insulated panels.

Security Screens:
- Electronic security systems or security glazing are preferred to physical screens or bars.
- Where physical barriers are required, develop simple rectangular designs that are unobtrusive.
ANCILLARY STRUCTURES

Consistency in the color, materials, and form of ancillary structures provides continuity in the outdoor spaces on the base and reduces overall visual clutter.

General

- Coordinate the siting of all ancillary structures with each other and adjacent buildings.
- Use non-weathering, corrosion-resistant materials.
- Landscape ancillary structures consistent with larger structures.
- Integrate the structure with landscaping, and other site elements.
- Do not use temporary buildings.
- Minimize the use and number of storage buildings, and consolidate in low-visibility areas.

Pavilions

- Locate pavilions centrally among facilities to create multipurpose use.
- Construct new pavilions with brick piers and hipped, standing seam dark bronze metal roofs at high-visibility locations.
- Use manufactured pavilions in low-visibility locations only.
- Wood gazebos are not allowed.
- Bike storage pavilions should match the materials of the adjacent facility.
- Do not use enclosed bike storage lockers.

Passenger Waiting Shelters

- Use brick walls and standing seam metal roofs as the standard.
- Manufactured shelters are only acceptable with ACFB approval.
- Provide glazing front and back to allow for views and wind protection for the user.
- Use brick pavers or scored pavement patterns as accent.

Kiosks

- Locate kiosks at high public use areas such as shopping areas, housing areas, and recreation areas.
- Design kiosks with metal roofs, brick, and precast concrete details compatible with surrounding architecture.
SCRENS AND ENCLOSURES

Screens and enclosures help to minimize the visual impact of undesirable features and provide separation and security where necessary. Both architectural and landscape screens – separately and in combination – can be applied to achieve visual continuity throughout the base.

General

- Where possible, use landscaping instead of walls for screening.
- Use landscaping to soften walls, fences, and screen dumpsters.
- Locate utility components in the least visible area with adequate access to minimize the need for screening and enclosures.
- Ensure screens are high enough to conceal equipment, vending machines, and utilities.

Walls

- Use brick with a precast sloping cap when adjacent to or within 50 feet of a building.
- Generally, do not attach screen walls to buildings.
- Construct free-standing garden walls of dark brown brick with dark buff limestone precast accents.
- Do not place screen walls immediately adjacent to roadways or sidewalks.
- Walls adjacent to building shall match the material.

Fences

- Standard brick columns with metal board-on-board fence screening is the base standard. Size columns proportional to setting.
- Use decorative metal fencing for high visibility sites.
- Dark brown vinyl-covered chain link fence in industrial and low-visibility sites is allowed with ACRB approval.
- Perimeter fencing shall respond to the site context and use combinations of vinyl covered, chain link, decorative metal, or brick per ACRB direction.
- Wood is allowed only in the Family Housing setting.

Dumpster Enclosures

- Locate dumpsters to minimize visual impact.
- Use brick with a precast sloping cap for wall construction.
- In high visibility locations, provide dark brown gates to screen dumpsters.
- Provide dark brown protective bollards.
- Provide concrete pads and access aprons.
- Include landscaping areas and provisions for pedestrian access.

Force Protection

- Integrate security walls with the building architecture.
- Use a combination of walls, bollards, and tension cables with landscape beds.
- Minimize the visibility of all force protection devices with landscaping and integral designs.
- Jersey Barriers are allowed only with...
LANDSCAPING
Use landscaping to enhance facilities and to unify the base. Organize landscape features that connect individual facilities with walkways, roadways, and open spaces.

Maintenance
- Establish a maintenance program.
- Use only approved planting materials as specified on the Landscape Materials Listing Appendix A3.
- Allow shrubs to mass naturally and avoid ornamental pruning.
- Use shredded hardwood with dark brown wood chip mulch to increase moisture retention and control weed growth.
- Do not use stone mulch to prevent damage to roots.
- Provide sprinkler systems in planting beds and high visibility areas.

Edging
- Separate and define all planting areas from sod areas with edging.
- Use light tan pavers as the base standard edging material.
- Raised planting beds constructed of brick or split face block may be used in pedestrian areas.
- Wood timber edging is not allowed.

Landscape Screens
- Where possible, use landscaping instead of walls for screening.
- Reduce the negative visual impacts of parking areas and unsightly features with landscape screening.
- Use a three-tiered landscaped screen that combines ground covers, shrubs, and small trees.

Roadways
- Primary roadways use same species, deciduous and coniferous street trees equally spaced to coordinate with light standards.
- Secondary and access roadways use a more random spacing of mixed species in clusters and/or groupings at focal points.
- Plant street trees on the building side of sidewalks.

Parking Areas
- Reduce the visual impact of large
parking areas with landscape buffers and parking islands.

- Use deciduous street trees in medians and islands to create shade and interest.
- Fill in between trees with low shrubs, flowers, and ground covers. Allow areas for pedestrians/cross circulation.
- Avoid the use of hedges outlining parking areas.
- Use shrubs in groupings and landscaped berms around the perimeter of parking areas to soften the impact.

**Facility**

- Use landscaping elements that complement building architectural features and proportions.
- Provide a soft transition from the horizontal ground plane to the plane of the building.
- Highlight building entries and architectural features and screen unattractive building features such as utility risers or service areas.
- Mix evergreen and deciduous palette of shrubs for seasonal interest.
- Design randomly spaced plantings and tree masses to fill areas between facilities.
- Use ground covers within planting beds.

**Open Spaces**

- Use turf for all recreation areas, parade grounds, lawns, and open fields.
- Create undeveloped natural areas using native grasses and shrubs.
- Incorporate maintenance-free ground cover materials in areas of steep slope or areas that are difficult to maintain.
- Follow McGuire Air Force Base tree removal policy.
WALKWAYS AND PATHS

Develop a consistent pedestrian circulation system of walkways and paths to enhance the community. Connect passenger waiting shelters, outdoor plazas, parks, and other pedestrian gathering sites into the overall circulation network.

Sidewalks
- Provide sidewalks a minimum of 5 feet wide along all primary, secondary, and access roadways.
- Maintain a minimum 3-foot-wide landscaped parkway between curb and sidewalk.
- Provide curvilinear, meandering walks for dormitory and housing areas.
- Size sidewalks appropriately for the visual scale of the facility and the amount of pedestrian traffic volume.
- Use natural colored concrete with a broom finish and trampled edges.

Plazas and Courtyard Paving
- Use red concrete pavers as a unifying theme for plazas and courtyard paving.
- Use concrete or brick pavers for banding edges and highlights within the design.
- Use manufacturer standard patterns for concrete pavers.

Recreation Trails
- Provide a minimum 6-foot paved width in a free form configuration that follows the contours or other natural features.
- Separate the trail system from vehicular traffic by a minimum of 10 feet.
- Take advantage of natural environments such as the golf course, wetland areas, etc.
- Incorporate activity generators, interpretive signs, and recreation opportunities.
- Provide a 5-foot by 10-foot paved rest area approximately every mile. Include a bench and litter receptacle at each location.
- Use asphaltic concrete for trail systems. In highly natural settings such as wetlands and wooded areas use compacted, crushed fines.

Crosswalks and Ramps
- Ensure that all paths lead to the safest crossing points possible, and cross roadways at 90-degree angles.
- Incorporate ADA accessible curb ramps and crosswalk markings into all crosswalks.
- Construct crosswalks of brick colored concrete pavers with natural gray concrete edging at high visibility locations to improve safety.
- Construct all concrete curb ramps with a waffle stamp pattern and flared curb ramps.
- Provide for adequate drainage away from the ramp or by drainage grates.
ROADS

Develop the transportation network to provide a consistent experience throughout the base. An organized system of primary, secondary, and tertiary arteries must provide sequential order with each hierarchy of roadway being designed consistently.

Primary

- Primary roadways are developed as boulevards and contain two lanes of traffic in each direction often with planted medians.
- Minimize stops and turns, and eliminate on-street parking.
- Parking and service access curb cuts are discouraged.
- Keep parking areas and building gaps away from the road edge.

Secondary

- Secondary roadways are feeder streets from access roads to primary roads.
- On-street parking is discouraged.
- Keep off-street parking areas away from the road edge.
- Minimize the number of curb cuts from driveways and area entrances.

Tertiary

- Tertiary roadways are the narrowest and slowest public streets and provide access to individual sites or parking areas.
- On-street parking and curb cuts for driveways, parking lot entrances, and service drives entrances are allowed.
- Maintain capability for large vehicles such as fire trucks and moving vans.

Service Drives

- Service drives provide access for service vehicles to certain parts of a building or site.
- Combine service drives for several facilities where possible.
- Maintain a setback between the building and service drive.
- Minimize the visual impact of service drives through correct placement of drives and landscape screening.

Paving

- Use asphalt paving for all primary, secondary, and access roadways.
- Use concrete paving in loading areas, dumpster enclosures, and sites used by heavy vehicles.
- Gravel surfacing may be used on pedestrian roads and walking sites only.
- Incorporate a concrete apron where gravel roads meet paved roads.
- All patching shall match adjacent materials.

Curb and Gutter

- Comply with base CE standards for all 6-inch integrated white concrete curb and gutter for all roadways in developed areas.
- Patrol roads and service drives in developing areas may not require curb and gutter, with ACRB approval.
- Wheel stops in lieu of curbs are not allowed.
- Do not paint concrete curbs.
PARKING

Develop functional lots with clear circulation and a positive appearance that complements the facility. Provide a pleasant transition from the parking area to the facility.

General

- Reduce large parking areas with landscaped islands and planting strips.
- Layout must address accessibility, maintenance, and safety issues.
- Combine parking areas for adjacent facilities.
- Avoid parking directly in front of primary building entrances.
- Provide spacing between parking lots and buildings in compliance with force protection standards.
- Avoid parking on roads or within 40 feet of an intersection.
- Use the 90-degree parking configuration when possible.
- Provide a green belt a minimum of 20 feet from parking lots to streets.
- Provide 4" wide white striping for all pavement markings.
- Do not paint hand-caught parking symbols on asphalt.

Medians and Islands

- Provide planting medians for every four rows of vehicles and paver islands for every 20 stalls.
- Coordinate layout for light poles with the islands and minimize their number to provide the required illumination.
- Provide designated areas for pedestrian cross traffic.

Reserved Parking

- Minimize number of reserved spaces.
- Designate spaces by rank or title with curb-mounted signs.

Paving

- Asphalt paving is the standard.
- Use concrete where required for heavy vehicles, motorcycle parking, and where fuel spills may occur.

Curb and Gutter

- Use concrete curbs and gutters for parking areas.
- Asphalt curbs, wood timbers, and precast wheel stops are prohibited.
- Do not paint concrete curbs.
SIGNS

Signs are an important and positive element in the overall base appearance. Their purpose is to clearly communicate necessary or helpful information for directions, identification, and customer service without adding visual clutter.

General

- Use concise, clear signage in accordance with Air Force, AMC, and McGuire AFB Sign Standards.
- Minimize the number of signs used for each facility.
- Signs must be consistent in style, placement, color, and language.
- Avoid logos, super graphics, or individual titles on buildings or identification signs.

Color

- Use dark brown for backgrounds with reflective white lettering on metal placards unless otherwise noted.
- Use dark brown square metal posts.
- Finish back of sign and fastening devices dark brown.

Identification Signs

- Limit the use of monument signs to entry gates, headquarters buildings, housing neighborhoods, and special use areas/facilities with ACRB approval.
- Construct monument signs with brick base, stucco field, and pin-mounted Helvetica lettering.
- Limit the use of mottos, individual titles, or signs.
- Incorporate landscaping, accent lighting, and/or paving.
- Facility identification signs with street addresses are generally free-standing and not applied to building facades.
- Display facility numbers in one location - at the back or side corner of buildings, coordinated with architectural features.
- Building mounted signs or individual letters with corporate logos are allowed for commercial facility signs only with ACRB approval.

Direction Signs

- Use to identify highly frequented or special interest destinations and street names.
- Display the Air Mobility Command logo decal on the left of all street name signs.

Regulation Signs

- Use for traffic control, parking, and base warnings.
- Traffic control signs must follow the Manual on Uniform Traffic Control Devices administered by the Federal Highway Administration for color and display requirements.
- Handicapped parking signs must follow AMC Exteriar Sign Standards for color and display requirements.
- Base warning signs must comply to the Air Force Sign Standard for color and display requirements.
SITE FURNISHINGS

The common use and style of site amenities will further unify the base, providing a recognizable theme of continuity throughout. Reflect on the base-wide standard regardless of where site furnishings are placed.

General
- Select site furnishings from the list on page A1.
- Use dark brown factory-applied powder-coat finish for all items.

Seating / Benches
- Provide seating along walkways, near building entries, and in courtyards and plazas.
- Place benches within a paved area.

Litter / Ash Receptacles
- Place surface-mounted or portable litter and ash receptacles at building entrances, pathways, outdoor seating, and picnic areas.
- Locate these to be functional yet visually unobtrusive.

Planters
- Minimize the use of freestanding planters.
- When used, locate planters in conjunction with other exterior elements.
- Use planters that match ash and litter receptacles in design.

Bike Racks
- Provide bicycle-parking areas for all facilities. Combine areas for densely sited building.
- Place bike racks on concrete pads in accessible locations near established bike routes and near secondary building entrances.
- Increase the numbers of available bike racks in residential and recreational areas.
- Screen bicycle parking areas with landscaping or screen walls.
- Align bollards at sites having multiple racks.

Barbecue Grills
- Limit built-in grills to recreational areas, dormitories, and fire stations.
- Use materials that complement adjacent facilities.
- Placement and design of built-in grills must be approved by the ACRB.
Picnic Tables
- Use factory finished, recycled plastic picnic tables with metal frames.
- Provide mid-morning to late afternoon shade for all picnic tables.
- Limit tables to outdoor picnic or dining areas and groups to allow for large parties or individual family outings.
- Do not use at administration yard areas or industrial facilities.

Bollards
- Use bollards to protect buildings, equipment, and people from vehicle impact and to restrict access.
- Use an 8-inch diameter, factory-finished dark brown aluminum, flat-top bollard as the standard.
- Other types of bollards that blend with the building materials are allowed based on ACRB approval.
- Use same style bollard with single function luminaire at pedestrian areas, pathways, and entrances.
- For force protection use an 8-inch diameter, concrete filled, steel pipe. Cap light force protection bollards with a pre-manufactured flat-top, single luminaire.
- For bollards protecting equipment or buildings from vehicle damage, paint to match adjacent surfaces.

Tree Grates
- Use black tree grate at all formal plazas and courtyards. Set tree grate into concrete pavement and accent with brick pavers.

Playground Equipment
- Provide consistent style pre-manufactured play equipment at parks, family housing areas, child development centers, community centers, recreational areas, and TLFs.
- Place equipment with safe ground surfacing, benches, litter receptacles, and landscaping for shade.
- Provide adequate pedestrian circulation paths to play areas.

Flag Poles
- Use a brushed aluminum pole, mounted on a concrete base.
- Create a sense of place at flag pole locations with landscape or plaza design.
LIGHTING

Exterior lighting is a system that directly impacts the visual qualities of the base. By day, the fixtures and poles add visual character and rhythm to the streetscape. By night these amenities contribute to the perception of safety and comfort. Use common components throughout the base.

General
- Use underground utility service to lighting fixtures.
- Use metal halide lamps for all applications.
- Photometrics are required for all applications.

Streets
- All classifications of roadways will use the same luminaries, poles, and mounting height.
- Use factory-finished historical reproduction luminaries and poles for all roadways.
- Equally space poles on alternating sides of all roadways.

Parking Areas
- Use arm-mounted, square, shoebox-type luminaries in factory-finished dark brown.
- Use multiple luminaries on dark brown, square poles to reduce the number of poles.
- Coordinate pole placement with parking island locations.

Walkways and Paths
- Provide pedestrian-scaled lighting fixtures throughout housing area and along recreation trails and sidewalks not adjacent to roadways.
- Use arm-mounted shoebox fixtures.
- Equally space light fixtures for sidewalks on same side of walk.

Mounting Heights
- Control spill over light near residential areas.
- Keep mounting heights low and consistent. Any lights mounted over 30 feet high require ACRE approval.

Architectural and Accent
- Incorporate recessed, wall-mounted luminaries to wash light across plaza, paving, and stairs.
- Minimize and integrate into the building design the use of building-mounted fixtures for general illumination of service yards and outdoor spaces.
- Uplight architectural and landscaping features to emphasize importance and hierarchy.
■ UTILITIES

Use consistent utility components and place electrical services and building feeds underground to reduce overhead visual clutter.

Utility Lines:
- Place all utility lines underground.
- Do not cut pavements to install utilities - bore whenever possible.

Utility Structures:
- Avoid free standing utility structures where possible.
- Use underground vaults for equipment where possible.
- Locate pad mounted equipment in less visible areas and screen with landscaping or screen walls.

Fire Hydrants:
- Locate fire hydrants at least 5 feet away from other structures. Maintain a 30-inch clear area.
- Paint hydrants dark brown.

Utility Components:
- Carefully place and organize equipment and services.
- Locate mechanical equipment on the least public side of the building.
- Screen mechanical equipment with landscaping materials or screen walls.
- If equipment is placed within 10 feet of a building, paint dark brown unless within 10 feet of a light colored surface, then match wall color.
- Minimize the use of all externally attached meters and control devices. If used, paint to match wall color.
- Exterior surface mounted utility conduits, lines, or equipment are not allowed (except meters and control devices).
- In remote locations, paint freestanding pipes and above ground utility system components dark brown.

Communications:
- Collocate coaxial and telephone exterior components and entry points.
- Align all communication components with one another on the horizontal and vertical plane.
flightline / industrial

The flightline encompasses aircraft hangars and maintenance facilities. Buildings should be designed with forms, materials, and color palettes similar to those of the Base-wide area, but with simplified detailing more befitting their function. Large buildings – common to this area – require careful design and orientation to avoid unappealing monotony.

**BUILDINGS**
- Observe all horizontal and vertical safety restrictions along the flightline.
- Consolidate functions where possible to eliminate smaller, individual buildings.
- Integrate large masses and volumes with smaller ones to minimize the scale.
- Only use pavement to buildings when necessary.
- Lower the apparent height of hangars and warehouses by modulating building elevations with subdued, clerestories, openings, material changes, and architectural detailing.
- Avoid large, flat facades.
- All industrial facilities require curbs and bollard protection.

**WALL SYSTEMS**
- Use a combination of brick and precast/ stucco accents on smaller administrative facilities.
- On larger structures, use flush metal panels above the first level of brick.
- Do not use metal panels as the sole material for any structure.
- Locate visible vents and louvers as planned design elements; avoid random placement.
- Vents and louvers are to match the color of adjacent surfaces.
**ROOF SYSTEMS**
- Hipped roofs are the standard. Use gabled roof forms only with ACRB approval.
- Low-slope roofs are allowed only for very large volumes with ACRB approval.
- Metal roofing for large industrial buildings may be at the minimum slope recommended by the manufacturer.
- Lower appendages and entries shall have hipped or gabled roofs.

**WINDOWS AND DOORS**
- Clerestory windows are encouraged to increase natural light and to break up the mass of the facade.
- Windows, doors, and frames must be dark brown on brick; structures with thermal break construction.
- Primary personnel entrance doors shall have full glass panels or glass sidelights.
- Secondary use doors, such as service and exit-only doors shall match adjacent wall surfaces.
- Large hanger doors must match the wall color.

**LANDSCAPING**
- Use landscaping to soften and reduce the scale of larger facilities.
- Minimize the use of deciduous trees and shrubs to prevent leaf buildup along the apron and runway.
- Reduce the density of landscaping by grouping landscape elements at entries and high-visibility areas.

**SCREENS AND ENCLOSURES**
- Integrate physical security measures into the architectural design process.
- Coordinate security walls with the design of adjacent facilities or the immediate context.
- Use screen walls and defined roadways in selected locations to direct and limit facility access.
- Painting of Jersey barriers is prohibited.
family housing

Residential architectural settings should express a neighborhood image that distinguishes them from the remainder of the base. Achieving architectural compatibility relies on the use of consistent building materials, site furnishings, and landscaping. Residents are afforded some opportunities to use the standards creatively to express individual pride of place in and around their homes.

- GENERAL
  - Organize units into cohesive neighborhoods with defined public space along the street. Minimize the use of cul-de-sacs.
  - The existing housing styles should be reviewed when planning for new units.
  - Construct new community facilities following the basewide design standards.

- WALL SYSTEMS
  - Use trim and accent colors that are compatible with the field colors and the highlight significant building features.
  - Alternate exterior color schemes randomly using the paint and siding colors specified on page A1.

- ROOF SYSTEMS
  - Use gabled or hipped roofs with between 4:12 and 6:12 pitch.
  - Consider the use of dormers.
  - Use a standard 30-year laminated shingle with architectural profile to unify the neighborhood scheme.
  - Use fascias, gutters, downspouts, and soffits finished to match the trim.
  - Use factory finished, corrosion resistant materials.

- ANCILLARY STRUCTURES
  - Install passenger waiting shelters at locations convenient to the family housing areas.
  - Use passenger waiting shelters that are sized to accommodate the number of people using them.
LANDSCAPING
- Use mixed species and informal landscaping to integrate new with existing housing areas and to improve the overall community setting.
- Add plantings for shade and privacy and develop foundation plantings.
- Use randomly spaced plantings and tree masses.
- Landscape the perimeter edges of recreational areas and common areas.
- Use landscaped bermns to soften major arterial roads and screen undesirable views.
- All self-help landscape materials are to follow the ACRB's approved materials list.
- Develop a street tree program.

SCREENS AND ENCLOSURES
- Use wood fencing for backyard privacy.
- Use dark brown vinyl-coated chain link fencing around the base boundary of the housing area.

ROADS
- Enhance streetscapes with landscaping, walkways, and site furnishings.
- Use road features such as smaller radius corners and narrow street widths to reduce traffic speeds.

WALKWAYS AND PATHS
- Emphasize pedestrian and bicycle circulation within housing areas and connect housing to community facilities.
- Provide seating and other basewide site furnishings along walkways.
- Use concrete slabs for patios.

NEIGHBORHOOD ENTRIES
- Construct neighborhood entrance signs reflecting the architectural character of the setting.
- Provide accent landscaping, lighting, and concrete paving.

LIGHTING AND UTILITIES
- Provide pedestrian-scale lighting fixtures throughout housing areas.
- Provide parking lot lighting that matches the basewide standard for primary roads and parking lots.
The ACP is a multipurpose tool that shall be used throughout the entire planning, programming, and design process, from inception to project completion for any project on base.

The ACP is implemented by the Base Civil Engineer.

While architectural designers are the primary users of the plan, it must also be used by project managers, programmers, planners, engineers, maintenance and operations personnel, self-help personnel, SABER personnel and the Architectural Compatibility Review Board (ACRB).

Any items purchased for the exterior of buildings – including those purchased with impact cards – must conform to the requirements prescribed in the ACP.

In the next three pages, key elements in the implementation process are highlighted.
Key Elements

Adhering to key elements of the implementation process leads to success in designing excellent facilities that will be compatible with and a part of the whole community.

- Distribute the ACP.
- Establish the Architectural Compatibility Review Board (ACRB).
- Hire good designers.
- Respect the General Plan.
- Process proper submittals.
- Cross-reference all planning and design documents to the ACP.

Distribute the ACP

Distribution of the plan should be as wide as possible. On base, provide copies to commanders of all major units and tenants, the civil engineering squadron commander, operations, branch chiefs, base architect, and community planner. Provide copies to the major command and headquarters representatives.

Establish the ACRB

The ACRB is the installation approval authority for all designs and visual features on the installation.

- The ACRB is organized by the Base Civil Engineer (BCE).
- The chairperson as appointed.
- Members include the base architect, community planner, chief engineer, and others as determined by the chairperson.
- The base architect, engineering disciplines, and project manager review designs regardless of ACRB involvement.
- The ACRB meets as required or as a subgroup of the Installation Facilities Board (IFB).
- Most projects, regardless of size, must be approved by the ACRB. (The chairperson makes the determination on review requirements).
- Design projects are submitted to the ACRB by the base assigned project manager (see project checklist on page A5 for submittal requirements).

ACRB Project Checklist

All projects and service contracts are to be reviewed by the ACRB using the checklist on page A5. The Base project manager is responsible for providing the design checklist to the ACRB for completion.
Hire Good Designers
Ensure the involvement of design oriented personnel in the A-E selection process.
- Select A-E firms that are sensitive to and understand architectural compatibility.
- The AF project manager provides copies of the ACP to the designer before design begins.

Respect the General Plan
All new projects must agree with the goals and objectives outlined in the installation master plan to ensure that the siting of new projects is compatible with adjacent facilities.

Process Proper Submittals
All architecturally sensitive design projects are reviewed by the ACRB. This includes Requirements Documents, Concept Design, and Final Design submittals.
Submittals shall include the required information and data at the appropriate times, and the process shall allow adequate review time.

Requirements Document
In the initial submittal, the A-E defines—with the help of the AF—the requirements for the project. It may explore potential solutions, but more importantly, it includes bubble diagrams depicting the relationships of major functional elements and site/facility development options. This submittal is reviewed by the ACRB.
Each submitted package will comprise the following:
- Scope / Programming Requirements
- Project Description
- Goals and Objectives
- Subarea Development Plans
- Site Inventory / Site Analysis
- Spatial Relationship Analysis (i.e., relationship to site)
- Adjacent Facilities and Project Site Photos
Site Inventory / Site Analysis includes (but is not limited to): vehicular traffic patterns, view, climatic conditions, environmental, safety, utility constraints, and geographic conditions. Refer to sketch.
Concept Design

This submittal must include adequate information to fully describe the project design, allowing customers/clients to easily comprehend the proposed solution. The goals is to achieve AF customer understanding and approval early in this process.

Multiple submittals may be required for large or complex projects. Generally, completion of concept design requires two submittals. The initial submittal provides a conceptual approach to the solution; while the final submittal presents a refined and more detailed design. These submittals shall be design presentation documents rather than construction documents.

Develop site plans, floor plans, roof plans, and building elevations concurrently to ensure the proposed solution is a comprehensive design. Floor plans must be developed with consideration of the site and building massing.

The ACRE will review concept submittals. If the initial submittal is rejected, or if there are significant concerns or comments, a resubmission is required prior to proceeding to the next design stage.

Each submittal package shall include:
- Concise Verbalized Design Concept
- Systems Description
- Adjacent Facilities and Site Photos
- Site Plans (colored)
- Floor Plans
  - Composite Elevations (with color and shadows)
- Mechanical/Electrical/Communications Entries and Equipment Locations and Configurations:
- Building Sections
- Roof Plan
- Massing or Perspective Sketches
- Study Model (as required)
- Cost Estimate

Final Design

The final design shall remain consistent with the approved concept design. It includes highly developed drawings that further refine and detail the visual and functional quality of the design.

As a minimum, each submittal package shall include the following:
- Formal Colored Rendering (early in this phase)
- Material/Color Boards (interior and exterior)
- Catalog Cuts (photos)
- Design Analysis
- Cost Estimate
- Contract Documents

Contract Documents (CDs)

Contract documents must be in AutoCAD and include comprehensive drawings and specifications to meet all of the standards defined by the ACP.

All civil, mechanical, and electrical drawings must be consistent with the architectural drawings. All utility elements such as light fixtures, transformers, panels, grilles, vents, piping etc. must be shown on the architectural drawings.
appendices

A1  Materials and Colors
A2  Exterior Color Applications
A3  Landscape Materials
A4  Related Plans and Guidelines
A5  ACRB Project Checklist
A6  Index
A7  Notes
The following building materials and products are representative of the style, color, and material to be used at McGuire Air Force Base. All construction projects are to use these items or a comparable product by another manufacturer. The manufacturers and styles are listed only to establish a baseline for the selection of construction materials. Original color samples are on file in Base Civil Engineering.

**Basewide**

- **Architectural Lettering**
  - Style: Helvetica Medium and Light
  - Color: Wheathead

- **Barbecue Grill**
  - Mfg: Scan Time
  - Style: #9
  - Color: Dark Brown #20040

- **Benches**
  - Mfg: Victor Stanley, Inc.
  - Style: Stackable 8853
  - Color: Dark Brown #20040

- **Bike Racks**
  - Mfg: Tenonform
  - Style: Ballon 2173
  - Color: Dark Brown #20040

- **Bollards - Force Protection**
  - Style: Steel with Concrete
  - Color: Dark Brown #20040

- **Bollards - Lighted and Non-Lighted**
  - Mfg: Middle Eastern Bollard
  - Style: Series 51000 Round
  - Color: Dark Brown #20040

- **Brick - Brown**
  - Mfg: Borden Perlino
  - Style: Modern 4x4x3
  - Color: Dark Brown #20040

- **Brick - Red**
  - Mfg: Richter Corp.
  - Style: Super 222 #124
  - Color: D-86

- **Doors - Storefront**
  - Mfg: Kommer Company Inc.
  - Style: Aluminum Insulated 280
  - Color: Dark Brown #20040

- **Drinking Fountains**
  - Mfg: Most Dependable Fountain
  - Style: #460
  - Color: Dark Brown #20040

- **Fencing - Chain Link**
  - Style: Vinyl Coated
  - Color: Dark Brown #20040

- **Gates**
  - Mfg: Anvilo
  - Style: Hinged
  - Color: Dark Brown #20040

- **Glass**
  - Tint: Bronze

- **Lighting - Parking and Walkways**
  - Mfg: Ipanco
  - Style: 5277
  - Color: Dark Brown #20040

- **Lighting - Street**
  - Mfg: Hcano
  - Style: 5277
  - Color: Dark Brown #20040

- **Litter and Ash Receptacles**
  - Mfg: Victor Stanley, Inc.
  - Style: Cloak 8853
  - Color: Dark Brown #20040

- **Picnic Tables**
  - Mfg: Fairweather
  - Style: F-85
  - Color: Wheathead

- **Planners - Free Standing**
  - Mfg: KT
  - Style: Galleria, Zephyr C
  - Color: PPG 1SR5847

- **Play Equipment**
  - Mfg: Iron Mountain Forge
  - Style: KB5
  - Color: Dark Brown #20040

- **Precast**
  - Mfg: WH Rissel and Co.
  - Color: Dark Rust Limestone

- **Roots - General**
  - Finish: Kynar 500 or Yetler 5000
  - Style: Flat Profile 16" wide, 2' seam
  - Color: Dark Brown #20040
  - Coating: Durana

- **Roots - Pavilions & Passenger Waiting Shelters**
  - Finish: Mineral Granular Surfaced
  - Style: GAF Tampico 5000
  - Color: Burnt Sienna Blend
  - Coating: Glutan Structure

- **Stucco**
  - Finish: Sand
  - Color: Wheathead

- **Translucent Panels**
  - Mfg: Kalwall
  - Color: Dark Brown #20040

- **Tee Grates**
  - Mfg: Urban Associates Inc.
  - Style: Chimney Taupe
  - Color: Low Luster Black

- **Windows**
  - Mfg: Kawneer Company Inc.
  - Style: Equiline S85F
  - Color: Dark Brown #20040

**Flame Retardant**

- **Walls - Metal Panel**
  - Mfg: Unicel Copper Sales, Inc.
  - Style: Series 4000
  - Color: Wheathead
  - Finishes: Crystal

**Concrete**

- **Asphalt Shingles**
  - Mfg: GAF Timberline
  - Style: Asphalt Tile
  - Color: Weathered wood, slate, pebble or charcoal blends.

- **Brick**
  - Mfg: Stone Co.
  - Color: McGuire Housing Red

- **Passenger Waiting Shelters**
  - Mfg: Midwest American Shelter Systems
  - Style: MC
  - Color: Dark Bronze

- **Pavers**
  - Mfg: Anchor Concrete Products, Inc.
  - Style: Anchor Cobble
  - Color: Liberty Blend

- **Vinyl Siding**
  - Mfg: Weatherstone
  - Style: Per ACRB approval
  - Finishes: For ACRB approval

- **Windows**
  - Style: Double hung vinyl
  - Color: White
exterior color applications

Wheatmeal
Fed. Standard 393B #17886

Dark Buff Limestone
Fed. Standard 393B #26885

Dark Brown
Fed. Standard 595B #20040

Note: 1. Original color samples are on file in the Base Civil Engineering Office.
2. Housing colors are listed on page A1.

- Applied color guidelines

Each color application will require some interpretation; however, each should generally follow these principles. Specific exceptions are allowed with the approval of the ACRB.

- Older facilities are normally the only ones requiring paint. All new facilities shall use integrally colored or factory-applied finishes.
- Primary wall color (field color) shall be wheatmeal on all painted walls unless otherwise directed by the ACRB.
- Reduce visual clutter by simplifying the application.
- The use of yellow hazard markings on buildings is prohibited.
- Remove building lettering and signs from building.
- Painting or applied artificial fascia, bases, details, etc., on facilities and painting of masonry or concrete architectural features such as quoins, lintels, bases, or capitals is prohibited.
- Paint equipment on brick buildings dark brown #20040.
- Paint equipment on painted buildings to match adjacent surface.
- Accenting downspouts or painting stripes around buildings is prohibited.
- Support and service buildings should have simplified, subtle paint schemes.
- Paint fuel and water tanks (handrails and equipment) off-white. Painting shields on tanks is discouraged.
- Variations are subject to ACRB approval.
- Primary door entries located in stucco walls are to be painted dark brown with ACRB approval.
- All other secondary doors are to be painted dark brown to prevent calling attention to them.
- Do not arbitrarily change paint colors.

architectural compatibility review board project checklist

This checklist applies to all projects large and small including self-help projects. Before building, purchasing, or installing items, the project manager will submit the following documentation for review and approval by the Architectural Compatibility Review Board (ACRB). Large projects requiring professional design services must submit this form along with the design package at each phase of the project. The list of items below is representative of what must be submitted at each phase. Project continuation is contingent on phase approval. Smaller projects not requiring full design services must submit project documentation as designated by the ACRB chairperson. All projects must comply with the ACF standards as verified by this checklist and the ACRB, unless a specific exception is approved by the chairperson.
