DATE OF THIS VERSION (new)
June 1, 2013

TITLE OF DOCUMENT (new title if applicable):

DATE OF VERSION BEING SUPERSEDED (old):
August 1, 2009

DESCRIPTION OF DOCUMENT (previous title, number, other identifying data):
Master Antenna Television Equipment and Systems, 27 41 31

SUMMARY OF CHANGES IN THIS VERSION:

1. The Guarantee Period of Service clause had been removed from this spec. section. It has been replaced with a requirement to comply with FAR clause, Warranty. See Article 4.3.
SECTION 27 41 31
MASTER ANTENNA TELEVISION EQUIPMENT AND SYSTEMS

SPEC WRITER NOTES:
1. Edit between //-----// Delete if not applicable to project. Refer to VA TVE (005OP3B - see Paragraph 1.3.D for specific contact info) for technical assistance.
2. Included throughout this specification are references to the system’s interface capability and various related features. The system designer shall verify availability of this system and coordinate associated requirements and subsequent interface(s).

PART 1 - GENERAL

1.1 SECTION SUMMARY
A. Work covered by this document includes design, engineering, labor, material, products, warranty, training and services for, and incidental to the complete installation of new and fully operating NFPA listed Master Antenna Television (TV) equipment and systems as detailed herein.
B. Work shall be complete, complete, labeled, VA Central Office (VACO) tested and certified and ready for operation.

1.2 RELATED SECTIONS
A. Section 01 33 23, SHOP DRAWINGS, PRODUCT DATA AND SAMPLES.
B. Section 26 05 21, LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES (600 Volts and Below).
C. Section 26 41 00, FACILITY LIGHTNING PROTECTION.
D. Section 27 10 00, STRUCTURED COMMUNICATIONS SYSTEMS CABLEING.
E. Section 27 05 11, REQUIREMENTS FOR COMMUNICATIONS INSTALLATIONS.
F. Section 27 05 26, GROUNDING AND BONDING FOR COMMUNICATIONS SYSTEMS.
G. Section 27 05 33, RACEWAYS AND BOXES FOR COMMUNICATIONS SYSTEMS.
H. Section 27 10 00, STRUCTURED CABLEING.
I. Section 27 15 00, COMMUNICATIONS HORIZONTAL CABLEING.
// J. Section 27 15 00.61/71, RADIO ENTERTAINMENT HORIZONTAL CABLEING AND EXTENSION.//
// K. Section 27 52 23, NURSE CALL/CODE BLUE EQUIPMENT AND SYSTEMS.//

1.3 DEFINITIONS
A. Provide: Design, engineer, furnish, install, connect complete, test, certify and warranty.
B. Work: Materials furnished and completely installed.

C. Review of contract drawings: A service by the engineer to reduce the possibility of materials being ordered which do not comply with contract documents. The engineer's review shall not relieve the Contractor of responsibility for dimensions or compliance with the contract documents. The reviewer's failure to detect an error does not constitute permission for the Contractor to proceed in error.

D. Headquarters Technical Review, for National/VA communications and security, codes, frequency licensing, standards, guidelines compliance:

   Office of Telecommunications
   Special Communications Team (005OP2B)
   1335 East West Highway - 3rd Floor
   Silver Spring, Maryland 20910
   (O) 301-734-0350, (F) 301-734-0360

E. Engineer: //XXXXXXX//
   //XXXXXXX//
   //XXXXXXX//
   //XXXXXXX//
   //XXXXXXX//

F. Owner: //XXXXXXX//

G. General Contractor (GC): //XXXXXXX//

H. Contractor: Radio Contractor; you; successful bidder

1.4 REFERENCES

A. The installation shall comply fully with all governing authorities, laws and ordinances, regulations, codes and standards, including, but not limited to:

   1. United States Federal Law/Codes:
      a. Departments of:
         1) CFR, Title 15 - Department of Commerce, Under the Information Technology Management Reform Act (Public Law 104-106), the Secretary of Commerce approves standards and guidelines that are developed by the:
(FIPS) 140-2—Security Requirements for Cryptographic Modules.

b) Chapter XXIII, National Telecommunications and Information Administration (NTIA – aka ‘Red Book’) Chapter 7.8/9

2) CFR, Title 29, Department of Labor, Chapter XVII —
Occupational Safety and Health Administration (OSHA), Part 1910 — Occupational Safety and Health Standard:

a) Subpart 7 — Definition and requirements for a National Recognized Testing Laboratory (NRTL — 15 Laboratory’s, for complete list, contact http://www.osha.gov/dts/otpca/nrtl/faq_nrtl.html)

4. Local Codes.

1.5 QUALIFICATIONS

A. The OEM shall have had experience with three or more installations of systems of comparable size and complexity about type and design as specified herein. Each of these installations shall have performed satisfactorily for at least 1 year after final acceptance by the user. Include the names, locations and point of contact for these installations as a part of the submittal.

B. The Contractor shall submit certified documentation that they have been an authorized distributor and service organization for the OEM for a minimum of 3 years. The Contractor shall be authorized by the OEM to pass thru the OEM’s warranty of the installed equipment to VA. In addition, the OEM and Contractor shall accept complete responsibility for the design, installation, certification, operation, and physical support for the system. This documentation, along with the System Contractor and OEM certifications must be provided in writing as part of the Contractor’s Technical submittal.

C. The Contractor’s Communications Technicians assigned to the system shall be fully trained, qualified, and certified by the OEM on the engineering, installation, operation, and testing of the system. The Contractor shall provide formal written evidence of current OEM certification(s) for the installer(s) as a part of the submittal or to the Resident Engineer before being allowed to commence work on the system.

D. Applicable national, state and local licenses.

E. Certificate of successful completion of OEM’s installation/training school for installing technicians of the equipment being proposed.

1.6 CODES AND PERMITS

A. Provide all necessary permits and schedule all inspections as identified in the contract’s milestone chart, so that the system is
proof of performance tested and ready for operation on a date directed
by the Owner.

B. The contractor is responsible to adhere to all codes described herein
and associated contractual, state and local codes.

1.7 SCHEDULING

A. After the award of contract, the Contractor shall prepare a detailed
schedule (aka milestone chart) using “Microsoft Project” software or
equivalent. The Contractor Project Schedule (CPS) shall indicate
detailed activities for the projected life of the project. The CPS
shall consist of detailed activities and their restraining
relationships. It will also detail manpower usage throughout the
project.

B. It is the responsibility of the Contractor to coordinate all work with
the other trades for scheduling, rough-in, and finishing all work
specified. The owner will not be liable for any additional costs due to
missed dates or poor coordination of the supplying contractor with
other trades.

1.8 REVIEW OF CONTRACT DRAWINGS AND EQUIPMENT DATA SUBMITTALS

A. Submit at one time within 10 days of contract awarding, drawings and
product data on all proposed equipment and system. Check for compliance
with contract documents and certify compliance with Contractor's
"APPROVED" stamp and signature.

B. Support all submittals with descriptive materials, i.e., catalog
sheets, product data sheets, diagrams, and charts published by the
manufacturer. These materials shall show conformance to specification
and drawing requirements.

C. Where multiple products are listed on a single cut-sheet, circle or
highlight the one that you propose to use. Provide a complete and
through equipment list of equipment expected to be installed in the
system, with spares, as a part of the submittal. Special Communications
(TVE-005OP3B – herein after referred to as [005OP3B]) will not review
any submittal that does not have this list.

D. Provide 4 copies to the PM for technical review. The PM will provide a
copy to the offices identified in Paragraph 1.3.C and D, at a minimum
for compliance review as described herein where each responsible
individual(s) should respond to the PM within 10 days of receipt of
their acceptance or rejection of the submittal(s).
E. Head End and each interface distribution cabinet layout drawing, as they are to be installed.

F. Equipment technical literature detailing the electrical and technical characteristics of each item of equipment to be furnished.

H. Engineering drawings of the system, showing calculated signal levels at the Head End input and output, each input and output distribution point, and signal level at each telecommunications outlet.

I. Antenna Signal Survey:
   1. The Contractor shall submit a computerized signal survey for the system radiated and receive RF signals. The survey(s) shall be made by a recognized industry source that is derived mathematically from fixed information and projects an approximation of the signal levels that can be expected at the actual site using a given antenna.
   2. The signal survey can usually be obtained from the OEM for the radio equipment at no charge. An on-site survey, using actual transmitting and receiving equipment of the type the Contractor has specified, is an acceptable alternate.
   3. The approximate longitude and latitude of the Facility along with the elevation above mean sea level can be obtained from the Resident Engineer.
   4. The Contractor shall record all findings on a geographic map with the Facility residing in its center and shall outline all coverage locations, radiating in a 360-degree pattern. The primary, secondary, marginal and out of range areas operation shall be depicted by different colors for each frequency of operation.

1.9 PROJECT RECORD DOCUMENTS (AS BUILTS)
A. Throughout progress of the work, maintain an accurate record of changes in Contract Documents. Upon completion of Work, transfer recorded changes to a set of Project Record Documents.

B. The floor plans shall be marked in pen to include the following:
   1. All device locations with labels.
   2. Conduit locations.
   3. Head-end equipment and specific location.
   4. Wiring diagram.
   5. Labeling and administration documentation.
   7. System test results.
1.10 WARRANTY
A. The Contractor shall warrant the installation be free from defect in material and workmanship for a period of 1 year from the date of acceptance of the project by the owner. The Contractor shall agree to remedy covered defects within eight (8) hours of notification of major failures or within twenty-four (24) hours of notification for individual station related problems.
B. Refer to Part 4 for applicable Warranty requirements.

1.11 USE OF THE SITE
A. Use of the site shall be at the GC’s direction.
B. Coordinate with the GC for lay-down areas for product storage and administration areas.
C. Coordinate work with the GC and their sub-contractors.
D. Access to buildings wherein the work is performed shall be directed by the GC.

1.12 DELIVERY, STORAGE, AND HANDLING
A. Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft.
B. Store products in original containers.
C. Coordinate with the GC for product storage. There may be little or no storage space available on site. Plan to potentially store materials off site.
D. Do not install damaged products. Remove damaged products from the site and replaced with new product at no cost to the Owner.

1.13 PROJECT CLOSEOUT
A. Prior to final inspection and acceptance of the work, remove all debris, rubbish, waste material, tools, construction equipment, machinery and surplus materials from the project site and thoroughly clean your work area.
B. Before the project closeout date, the Contractor shall submit:
   1. Warranty certificate.
   2. Evidence of compliance with requirements of governing authorities such as the Low Voltage Certificate of Inspection.
   3. Project record documents.
   4. Instruction manuals and software that is a part of the system.
C. Contractor shall submit written notice that:
   1. Contract Documents have been reviewed.
   2. Project has been inspected for compliance with contract.
3. Work has been completed in accordance with the contract

PART 2 – PRODUCTS AND FUNCTIONAL REQUIREMENTS

2.1 GENERAL REQUIREMENTS FOR EQUIPMENT AND MATERIALS

A. Furnish and install a complete and fully operational master antenna TV signal distribution system. Include all amplifiers, power supplies, cables, outlets, attenuators, antennas, and all other parts necessary for the reception and distribution of the off-the-air TV signals. 

B. Coordinate features and select components to form an integrated system. Match components and interconnections for optimum performance of specified functions.

C. Expansion Capability: Increase number of stations in the future by 25 percent above those indicated without adding any internal or external components or main trunk cable conductors.

D. Distribute cable channels to all TV outlets to permit simple connection of EIA standard high definition television (HDTV) receivers.

E. Deliver at all outlets all HDTV monochrome and color television signals without introducing noticeable effect on picture and color fidelity or sound. System picture fidelity shall be equal to that received from the cable company and other modulated channels.

F. Provide reception quality at each outlet equal to or better than that received in the area with individual antennas. Deliver at all television outlets a minimum +6.0 dBmv (2,000 microvolts across 75 Ohms) and maximum of +20 dBmv (20,000 microvolts) for each channel at each outlet.

G. Equipment: Modular type using solid-state components, fully rated for continuous duty unless otherwise indicated. Select equipment for normal operation on input power usually supplied at 110 to 130 V, 60 Hz.

H. Meet all FCC requirements regarding low radiation and/or interference of RF signal(s). The system shall be designed to prevent direct pickup of signals from the building structure.

I. Weather-Resistant Equipment: Listed and labeled by an OSHA certified National Recognized Testing Laboratory (NRTL – i.e. UL) for duty outdoors or in damp locations.

2.2 SYSTEM DESCRIPTION

A. The Contractor is responsible for interfacing the telephone //red//, Nurse Call//, and _________ // systems with the system.

B. The Contractor shall continually employ interfacing methods that are approved by the OEM and VA. At a minimum, an acceptable interfacing
method requires not only a physical and mechanical connection, but also
a matching of signal, voltage, and processing levels with regard to
signal quality and impedance. The interface point must adhere to all
standards described herein for the full separation of Critical Care and
Life Safety systems.

C. It is not acceptable to utilize the telephone cable system for the
control of MATV signals and equipment. The System Contractor shall
connect the system ensuring that all NFPA and Underwriters Laboratory,
Inc. (UL) Critical Care and Life Safety Circuit and system separation
guidelines are satisfied. The System Contractor is not allowed to make
any connections to the Telephone System. The Owner shall arrange for
the interconnection between the MATV, Nurses Call and // __________ //
Systems with the appropriate responsible parties.

D. All passive distribution equipment shall meet or exceed -80 dB
radiation shielding specifications and be provided with screw type
audio connectors.

E. All trunk, branch, and interconnecting cables and unused equipment
ports or taps shall be terminated with proper terminating resistors
designed for RF, audio and digital cable systems without adapters.

F. The system shall utilize microprocessor components for all signaling
and programming circuits and functions. System program memory shall be
non-volatile or protected from erasure from power outages for a minimum
of 30 minutes.

G. Provide a backup battery or a UPS for the system (including each
distribution cabinet/point) to allow normal operation and function (as
if there was no AC power failure) in the event of an AC power failure
or during input power fluctuations for a minimum of 30 minutes.

H. Plug-in connectors shall be provided to connect all equipment, except
coaxial cables and RF transmission line interface points. Coaxial cable
distribution points and RF transmission lines shall use coaxial cable
connections recommended by the cable OEM and approved by the system
OEM. Base band cable systems shall utilize barrier terminal screw type
connectors, at a minimum. As an alternate, crimp type connectors
installed with a ratchet type installation tool are acceptable provided
the cable dress, pairs, shielding, grounding, connections and labeling
are the same as the barrier terminal strip connectors. Tape of any
type, wire nuts or solder type connections are unacceptable and will
not be approved.
I. All equipment faceplates utilized in the system shall be stainless steel, anodized aluminum or UL approved cycolac plastic for the areas where provided.

J. Noise filters and surge protectors shall be provided for each equipment interface cabinet, Head End cabinet, control console and local and remote amplifier locations to insure protection from input primary AC power surges and to insure noise glitches are not induced into low voltage data circuits.

K. Audio Level Processing: The use of telephone cable to distribute MATV signals, carrying system or sub-system AC or DC voltage is not acceptable and will not be approved. Additionally, each control location shall be provided with the equipment required to insure the system can produce its designed audio channel capacity at TV/speaker identified on the contract drawings.

L. Contractor is responsible for pricing all accessories and miscellaneous equipment required to form a complete and operating system. Unless otherwise noted in this Part, equipment quantities shall be as indicated on the drawings.

2.3 MANUFACTURERS

A. The products specified shall be new, FCC and UL Listed, and produced by OEM manufacturer of record. An OEM of record shall be defined as a company whose main occupation is the manufacture for sale of the items of equipment supplied and which:
   1. Maintains a stock of replacement parts for the item submitted,
   2. Maintains engineering drawings, specifications, and operating manuals for the items submitted, and
   3. Has published and distributed descriptive literature and equipment specifications on the items of equipment submitted at least 30 days prior to the Invitation for Bid.

B. Specifications contained herein as set forth in this document detail the salient operating and performance characteristics of equipment in order for VA to distinguish acceptable items of equipment from unacceptable items of equipment. When an item of equipment is offered or furnished for which there is a specification contained herein, the item of equipment offered or furnished shall meet or exceed the specification for that item of equipment.

C. The equipment items are the salient requirements of VA to provide an acceptable system described herein.
2.4 PRODUCTS

A. The system distribution amplifier shall have a frequency range of 49-1,000 MHz and shall accommodate a minimum of 35 HDTV channels of programming. Gain of the preamplifier shall be 32dB, with an output level of 48dBmV for each HDTV channel processed. The preamplifier shall utilize a hybrid push-pull amplifier module. The preamplifier shall provide gain and slope control ranges of 8dB and 9dB, respectively.

B. Provide one 8-port passive combiner for the combining of all RF signals into one main trunk run for distribution to all building locations. Bandwidth of combiners shall be 0 to 1,000MHz.

C. Provide riser rated coaxial cable with a nominal characteristic impedance of 75 Ohms throughout the entire frequency spectrum utilized in this system. Each reel of cable shall be sweep-tested and return-loss tested over the entire frequency range from 50MHz to 750MHz by the manufacturer. Provide RG-6, RG-11 or appropriate minimum .500” Hardline Coaxial cable as required to achieve the specified signal level. However, all runs over 150’ in length shall be RG-11 or .500”.

D. Line Splitters:
   1. Provide low-radiation line splitters with a flat frequency response from 50MHz to 1,000MHz. Provide units of a hybrid design with a 75-ohm match on input and outputs and a VSWR no greater than 1.4:1.
   2. Two way line splitters shall have a signal loss of not more than 3.5dB at each output.
   3. Four way line splitters shall have a signal loss of not more than 7.2dB at each output.
   4. All unused splitter outputs shall be terminated with 75-Ohm terminations.

E. HDTV Outlets:
   1. Provide outlets at each location shown on the plans. Mount in electrical contractor provided 4” square, 2” deep minimum flush electrical boxes as indicated on plans.
   2. Provisions shall be incorporated in the network to prevent 60 Hz AC or DC feedback into the distribution lines.
   3. Outlets shall be designed to cover a frequency range of 10MHz to 1,000MHz. Insertion loss shall not exceed 1.0 db at any frequency within the designated frequency range for a 17dB isolation network. Outlets shall be back-matched from 10 to 1,000MHz. Outlets shall
have one F-type connector on the front and two F-type connectors on the rear.

4. The minimum isolation value between any two outlets shall be 24 db.

F. Television Receivers shall be provided separately by the Owner.

G. Distribution Devices:
   1. Distribution Amplifier:
      a. Description: Broadband CATV quality HDTV distribution amplifier.
      b. Specifications:

      | Frequency Range: 49MHz to 1,000MHz. | Channel Loading: 150. |
      | Flatness: +/- .75dB. | Gain: 32dB. |
      | Output Level: +40dBmV. | Gain Control Range: 10dB. |
      | Slope Control Range: 8dB. | Plug in equalizers as needed. |
      | Attenuator options as needed. | |

   2. Splitters:
      a. Description: RF signal splitter.
      b. Specifications:

      | Frequency Range: 5MHz to 1,000MHz. | Outputs: 2, 3, 4 and 8. |
      | Splitter Loss: less than 12 dB. | RFI Shielding: 120dB. |

   3. Taps:
      a. Description: Directional Coupler Type Taps.
      b. For use in Telecomm closets or accessible cable trays.
      c. Specifications:
         1. Frequency Range: 5MHz to 1,000MHZ.
         2. Outputs: 2, 4 and 8.
         3. Isolation Tap Value: Varies.

   4. Wallplate Bulkhead Connector and Terminators:
      a. Description: Wall plates for termination of CATV signals at television sets.
         1. Impedance: 75 Ohms.
         2. Frequency Band: SUB/VHF/CATV/UHF.

   5. “F” Connectors:
      a. Coaxial cable connectors and connector inserts shall be designed to provide maximum performance with the cable to be used. Coaxial
Cables shall be connectorized with the Head End quality 360 degree F or BNC connectors as applicable, meeting or exceeding standard industry and the cable manufacture's specifications. All drop F-connectors shall be hex type crimp or a "Snap and Seal" type connector. Housing to housing (KS to KS) type or 90-degree type connectors shall be used where specified by the OEM.

6. Terminator:
   a. Description: 75-Ohm terminator.
   b. Specifications:

   | DC blocking. | Bandwidth: 50MHz-890MHz. |
   | Return Loss: greater than 16dB. | Impedance: 75 Ohm. |

7. Trunk Cable:
   a. Description: .500 inch, Semi-Rigid Coax, Riser Rated.
   b. Specifications:
      1. Maximum Attenuation:

      | 2.92 dB/100ft at 700 MHz. | 3.78 dB/100ft at 1000 MHz. |
      | Impedance: 75 Ohm |

8. RG6 Cable:
   a. Description: CATV RG6 double shielded cable CM Rated
   b. Specifications:
      1. Attenuation:

      | 1.48 dB/100ft at 50 MHz. | 7.45 dB/100ft at 1000 MHz. |
      | Impedance: 75 Ohm |

9. RG11 Cable:
   a. Description: CATV RG11 cable CM Rated
   b. Specifications:
      1. Attenuation:

      | 0.90 dB/100ft at 50 MHz. | 5.04 dB/100ft at 1000 MHz. |
      | Impedance: 75 Ohm |
PART 3 - EXECUTION

3.1 PROJECT MANAGEMENT

A. Assign a single project manager to this project who will serve as the point of contact for the Owner, the General Contractor, and the Engineer.

B. The Contractor shall be proactive in scheduling work at the hospital, specifically the Contractor will initiate and maintain discussion with the general contractor regarding the schedule for ceiling cover up and install cables to meet that schedule.

C. Contact the Office of Telecommunications, Special Communications Team (005OP3B) at (301) 734-0350 to have a VA Certified Telecommunications COTR assigned to the project for telecommunications review, equipment and system approval and co-ordination with VA’s Spectrum Management and OCIS Teams.

3.2 COORDINATION WITH OTHER TRADES

A. Coordinate with the cabling contractor the location of the faceplate and the faceplate opening for the MATV backbox.

B. Coordinate with the cabling contractor the location of MATV equipment in the Telecommunications Closets.

C. Before beginning work, verify the location, quantity, size and access for the following:
   Isolated ground AC power circuits provided for systems.
   Primary, emergency and extra auxiliary AC power generator requirements.
   Junction boxes, wall boxes, wire troughs, conduit stubs and other related infrastructure for the systems.
   System components installed by others.
   Overhead supports and rigging hardware installed by others.

D. Immediately notify the Owner, General Contractor and Consultant in writing of any discrepancies.

3.3 NEEDS ASSESSMENT

Provide a one-on-one meeting with the particular nursing manager of each unit affected by the installation of the new HDTV MATV system. Review the floor plan drawing, educate the nursing manager with the functions of the equipment that is being provided and gather details specific to the individual units; coverage and priorities of calls; staffing patterns; and other pertinent details that will affect system programming and training.
3.4 INSTALLATION

A. General:

1. Execute work in accordance with National, State and local codes, regulations and ordinances.

2. Install work neatly, plumb and square and in a manner consistent with standard industry practice. Carefully protect work from dust, paint and moisture as dictated by site conditions. The Contractor will be fully responsible for protection of his work during the construction phase up until final acceptance by the Owner.

3. Install equipment according to OEM’s recommendations. Provide any hardware, adaptors, brackets, rack mount kits or other accessories recommended by OEM for correct assembly and installation.

4. Secure equipment firmly in place, including receptacles, speakers, equipment racks, system cables, etc:
   a. All supports, mounts, fasteners, attachments and attachment points shall support their loads with a safety factor of at least 5:1.
   b. Do not impose the weight of equipment or fixtures on supports provided for other trades or systems.
   c. Any suspended equipment or associated hardware must be certified by the OEM for overhead suspension.
   d. The Contractor is responsible for means and methods in the design, fabrication, installation and certification of any supports, mounts, fasteners and attachments.

5. Locate overhead ceiling-mounted loudspeakers as shown on drawings, with minor changes not to exceed 12 inches in any direction:
   a. Mount transformers securely to speaker brackets or enclosures using screws. Adjust torsion springs as needed to securely support speaker assembly.
   b. Speaker back boxes shall be completely filled with fiberglass insulation.
   c. Seal cone speakers to their enclosures to prevent air passing from one side of the speaker to the other.

6. Finishes for any exposed work such as plates, racks, panels, speakers, etc. shall be approved by the Architect, Owner and 005OP3B.

7. Coordinate cover plates with field conditions. Size and install cover plates as necessary to hide joints between back boxes and
surrounding wall. Where cover plates are not fitted with connectors, provide grommeted holes in size and quantity required. Do not allow cable to leave or enter boxes without cover plates installed.

B. Equipment Racks:
1. Fill unused equipment mounting spaces with blank panels or vent panels. Match color to equipment racks.
2. Provide security covers for all devices not requiring routine operator control.
3. Provide vent panels and cooling fans as required for the operation of equipment within the OEM's specified temperature limits. Provide adequate ventilation space between equipment for cooling. Follow manufacturer’s recommendations regarding ventilation space between amplifiers.
4. Provide insulated connections of the electrical raceway to equipment racks.
5. Provide continuous raceway and conduit with no more than 40 percent fill between wire troughs and equipment racks for all non-plenum-rated cable. Ensure each system is mechanically separated from each other in the wireway.

C. Wiring Practice – in addition to the mandatory infrastructure requirements outlined in VA Construction Specification, Section 27 10 00, STRUCTURED COMMUNICATIONS CABLELING SYSTEM, the following additional practices shall be adhered to:
1. Comply with requirements for raceways and boxes specified in Division 26, Section 26 05 33, RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS.
2. Execute all wiring in strict adherence to the National Electrical Code, applicable local building codes and standard industry practices.
3. Where raceway is to be EMT (conduit), wiring of differing classifications shall be run in separate conduit. Where raceway is to be an enclosure (rack, tray, wire trough, utility box) wiring of differing classifications, which share the same enclosure, shall be mechanically partitioned and separated by at least 4 inches. Where Wiring of differing classifications must cross, they shall cross perpendicular to one another.
4. Do not splice wiring anywhere along the entire length of the run. Make sure cables are fully insulated and shielded from each other and from the raceway for the entire length of the run.

5. Do not pull wire through any enclosure where a change of raceway alignment or direction occurs. Do not bend wires to less than radius recommended by manufacturer.

6. Replace the entire length of the run of any wire or cable that is damaged or abraided during installation. There are no acceptable methods of repairing damaged or abraided wiring.

7. Use wire pulling lubricants and pulling tensions as recommended by the OEM.

8. Use grommets around cut-outs and knock-outs where conduit or chase nipples are not installed.

9. Do not use tape-based or glue-based cable anchors.

10. Ground shields and drain wires as indicated by the drawings.

11. Field wiring entering equipment racks shall be terminated as follows:
   a. Provide ample service loops at harness break-outs and at plates, panels and equipment. Loops should be sufficient to allow plates, panels and equipment to be removed for service and inspection.
   b. Line level and speaker level wiring may be terminated inside the equipment rack using specified terminal blocks (see “Products”). Provide 15 percent spare terminals inside each rack. Microphone level wiring may only be terminated at the equipment served.
   c. If specified terminal blocks are not designed for rack mounting, utilize 3/4 inch plywood or 1/8 inch thick aluminum plates/blank panels as a mounting surface. Do not mount on the bottom of the rack.
   d. Employ permanent strain relief for any cable with an outside diameter of 1 inch or greater.

12. Use only balanced audio circuits unless noted otherwise.

13. Make all connections as follows:
   a. Make all connections using rosin-core solder or mechanical connectors appropriate to the application.
   b. For crimp-type connections, use only tools that are specified by the manufacturer for the application.
c. Use only insulated spade lugs on screw terminals. Spade lugs shall be sized to fit the wire gauge. Do not exceed two lugs per terminal.

d. Wire nuts, electrical tape or “Scotch Lock” connections are not acceptable for any application.

D. Cable Installation - In addition to the mandatory infrastructure requirements outlined in VA Construction Specification, Section 27 10 00, STRUCTURED CABLING the following additional practices shall be adhered to:

1. Support cable on maximum 4’-0” centers. Acceptable means of cable support are cable tray, j-hooks, and bridal rings. Velcro wrap cable bundles loosely to the means of support with plenum rated Velcro straps. Plastic tie wraps are not acceptable as a means to bundle cables.

2. Run cables parallel to walls.

3. Install maximum of 10 cables in a single row of J-hooks. Provide necessary rows of J-hooks as required by the number of cables.

4. Do not lay cables on top of light fixtures, ceiling tiles, mechanical equipment, or ductwork. Maintain at least 2’-0” clearance from all shielded electrical apparatus.

5. All cables shall be tested after the total installation is fully complete. All test results are to be documented. All cables shall pass acceptable test requirements and levels. Contractor shall remedy any cabling problems or defects in order to pass or comply with testing. This includes the re-pull of new cable as required at no additional cost to the Owner.

6. Ends of cables shall be properly terminated on both ends per industry and OEM’s recommendations.

7. Provide proper temporary protection of cable after pulling is complete before final dressing and terminations are complete. Do not leave cable lying on floor. Bundle and tie wrap up off of the floor until you are ready to terminate.

8. Cover the end of the overall jacket with a 1 inch (minimum) length of transparent heat-shrink tubing. Cut unused insulated conductors 2 inches (minimum) past the heat-shrink, fold back over jacket and secure with cable-tie. Cut unused shield/drain wires 2 inches (minimum) past the Heatshrink and serve as indicated below.
9. Cover shield/drain wires with heat-shrink tubing extending back to the overall jacket. Extend tubing 1/4 inch past the end of unused wires, fold back over jacket and secure with cable tie.

10. For each solder-type connection, cover the bare wire and solder connection with heat-shrink tubing.

11. Terminate conductors; no cable shall contain unterminated elements. Make terminations only at outlets and terminals.

12. Splices, Taps, and Terminations: Arrange on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Cables may not be spliced.

13. Bundle, lace, and train conductors to terminal points without exceeding OEM's limitations on bending radii. Install lacing bars and distribution spools.

14. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used.

15. Cable shall not be run through structural members or be in contact with pipes, ducts, or other potentially damaging items.

E. Labeling:

1. Clearly, consistently, logically and permanently mark switches, connectors, jacks, relays, receptacles and electronic and other equipment.

2. Engrave and paint fill all receptacle panels using 1/8 inch (minimum) high lettering and contrasting paint.

3. For rack-mounted equipment, use engraved Lamacoid labels with white 1/8 inch (minimum) high lettering on black background. Label the front and back of all rack-mounted equipment.

4. Where multiple pieces of equipment reside in the same rack group, clearly and logically label each indicating to which room, channel, receptacle location, etc. they correspond.

5. Permanently label cables at each end, including intra-rack connections. Labels shall be covered by the same, transparent heat-shrink tubing covering the end of the overall jacket. Alternatively, computer generated labels of the type which include a clear protective wrap may be used.

6. Contractor’s name shall appear no more than once on each continuous set of racks. The Contractor’s name shall not appear on wall plates or portable equipment.
7. Ensure each OEM supplied equipment has permanently attached/marked the appropriate UL Labels/Marks for the service the equipment is performed. Equipment installed not bearing these UL marks will not be allowed to be part of the system. The Contractor shall bear all costs required to provide replacement equipment with approved UL marks.

3.5 PROTECTION OF NETWORK DEVICES

Contractor shall protect network devices during unpacking and installation by wearing manufacturer approved electrostatic discharge (ESD) wrist straps tied to chassis ground. The wrist strap shall meet OSHA requirements for prevention of electrical shock, should technician encounter high voltage.

3.6 CUTTING AND PATCHING

A. It shall be the responsibility of the contractor to keep their work area clear of debris and clean area daily at completion of work.

B. It shall be the responsibility of the contractor to patch and paint any wall or surface that has been disturbed by the execution of this work.

C. The Contractor shall be responsible for providing any additional cutting, drilling, fitting or patching required that is not indicated as provided by others to complete the Work or to make its parts fit together properly.

D. The Contractor shall not damage or endanger a portion of the Work or fully or partially completed construction of the Owner or separate contractors by cutting, patching or otherwise altering such construction, or by excavation. The Contractor shall not cut or otherwise alter such construction by the Owner or a separate contractor except with written consent of the Owner and of such separate contractor; such consent shall not be unreasonably withheld. The Contractor shall not unreasonably withhold from the Owner or a separate Contractor, the Contractor’s consent to cutting or otherwise altering the work.

E. Where coring of existing (previously installed) concrete is specified or required, including coring indicated under unit prices, the location of such coring shall be clearly identified in the field and the location shall be approved by the Project Manager prior to commencement of coring work.
3.7 FIREPROOFING

A. Where MATV cables penetrate fire rated walls, floors and ceilings, fireproof the opening.

B. Provide conduit sleeves (if not already provided by electrical contractor) for cables that penetrate fire rated walls. After the cabling installation is complete, install fire proofing material in and around all conduit sleeves and openings. Install fire proofing material thoroughly and neatly. Seal all floor and ceiling penetrations.

C. Use only materials and methods that preserve the integrity of the fire stopping system and its rating.

3.8 GROUNDING

A. Ground cable shields and equipment to eliminate shock hazard and to minimize ground loops, commonmode returns, noise pickup, cross talk, and other impairments.

B. Signal Ground Terminal: Locate at main equipment cabinet. Isolate from power system and equipment grounding.

C. Install grounding electrodes as specified in Division 26, Section 26 05 26, GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS.

D. Do not use “3rd or 4th” wire internal electrical system conductors for ground.

E. Do not connect system ground to the building’s external lightning protection system.

F. Do not “mix grounds” of different systems.

PART 4 - TESTING/WARRANTY/TRAINING

4.1 SYSTEM CLASSIFICATION

The HDTV MATV System is FCC and NFPA listed. Therefore, the following testing and guaranty provisions are the minimum to be performed and provided by the contractor and Warranted by the OEM.

4.2 PROOF OF PERFORMANCE TESTING

A. Intermediate Testing:

1. After completion of 25 - 30 percent of the installation of a head end cabinet(s) and equipment, one wing of HDTV MATV outlets //and interconnection to the corresponding Nurse Call (Code Blue) System Patient Head Wall Units // and prior to any further work, this portion of the system must be pretested, inspected, and certified. Each item of installed equipment shall be checked to ensure appropriate FCC listing and UL certification labels are affixed, NFPA, Emergency, Safety, and JCAHCO guidelines are followed, and
proper installation practices are followed. The intermediate test shall include a full operational test.

2. The inspection and test will be conducted by a factory-certified contractor representative and witnessed by a Government Representative. The results of the inspection will be officially recorded by a local Government Representative and maintained on file by the Resident Engineer (RE), until completion of the entire project. The results will be compared to the Acceptance Test results. An identical inspection may be conducted between the 65 - 75 percent of the system construction phase, at the direction of the Resident Engineer.

B. Pretesting:

1. Upon completing installation of the system, the Contractor shall align, balance, and completely pretest the entire system under full operating conditions.

2. Pretesting Procedure:
   a. During the system pretest the Contractor shall verify (utilizing approved test equipment) that the system is fully operational and meets all the system performance requirements of this standard.
   b. The Contractor shall pretest and verify that all system functions and specification requirements are met and operational, no unwanted aural effects, such as signal distortion, noise pulses, glitches, audio hum, poling noise, etc. are present. At a minimum, each of the following locations shall be fully pretested:
      1) Antennas.
      2) Lightning Grounds.
      3) Head End.
      4) Local and Remote Control Units/Enunciation Panels.
      5) All Networked locations.
      6) System interface locations (i.e. PA, Auditorium Audio, etc.).
      7) System trouble reporting.
      8) UPS operation.
      9) Primary and Emergency AC Power Requirements
     10) Extra Auxiliary Generator Requirements.

3. The Contractor shall provide 4 copies of the recorded system pretest measurements and the written certification that the system is ready
for the formal acceptance test shall be submitted to the Resident
Engineer.

C. Acceptance Test:

1. After the system has been pre-tested and the Contractor has
   submitted the pretest results and certification to the Resident
   Engineer, then the Contractor shall schedule an acceptance test date
   and give the Resident Engineer 30 days written notice prior to the
date the acceptance test is expected to begin. The system shall be
tested in the presence of a Government Representative and an OEM
certified representative. The system shall be tested utilizing the
approved test equipment to certify proof of performance and FCC
compliance. The test shall verify that the total system meets all
the requirements of this specification. The notification of the
acceptance test shall include the expected length (in time) of the
test.

2. The acceptance test shall be performed on a "go-no-go" basis. Only
   those operator adjustments required to show proof of performance
   shall be allowed. The test shall demonstrate and verify that the
   installed system does comply with all requirements of this
    specification under operating conditions. The system shall be rated
   as either acceptable or unacceptable at the conclusion of the test.
   Failure of any part of the system that precludes completion of
   system testing, and which cannot be repaired in 4 hours, shall be
   cause for terminating the acceptance test of the system. Repeated
   failures that result in a cumulative time of 8 hours to affect
   repairs shall cause the entire system to be declared unacceptable.
   Retesting of the entire system shall be rescheduled at the
   convenience of the Government.

D. Acceptance Test Procedure:

1. Physical and Mechanical Inspection:
   a. The VACO Government Representative will tour all major areas
      where the system is and all sub-systems are completely and
      properly installed to insure they are operationally ready for
      proof of performance testing. A system inventory including
      available spare parts will be taken at this time. Each item of
      installed equipment shall be checked to ensure appropriate UL
      certification labels are affixed.
b. The system diagrams, record drawings, equipment manuals, Telecommunications Infrastructure Plant (TIP) Auto CAD Disks, intermediate, and pretest results shall be formally inventoried and reviewed.

c. Failure of the system to meet the installation requirements of this specification shall be grounds for terminating all testing.

2. Operational Test:

a. After the Physical and Mechanical Inspection, the antennas, head end terminating and control equipment shall be checked to verify that it meets all performance requirements outlined herein. A spectrum analyzer and sound level meter shall be utilized to accomplish this requirement.

b. Following the Antennas and Head End equipment test, the local // and remote // control unit be connected to the Head End equipment’s output test tap to ensure there are no signal distortions such as intermodulation, data noise, popping sounds, erratic system functions, on any function.

c. The distribution system shall be checked at each interface, junction, and distribution point, first, middle, and last leg to verify that the HDTV MATV video, audio and control signals meets all system performance standards.

d. Each HDTV MATV outlet shall be functionally tested at the same time utilizing the Contractor’s approved hospital grade TV receiver and Spectrum Analyzer.

e. The red system and volume stepper switches shall be checked to insure proper operation of the pillow speaker, the volume stepper and the red system (if installed).

f. Once these tests have been completed, each installed sub-system function shall be tested as a unified, functioning and fully operating system.

g. Individual Item Test: The VACO Government Representative will select individual items of equipment for detailed proof of performance testing until 100 percent of the system has been tested and found to meet the contents of this specification. Each item shall meet or exceed the minimum requirements of this document.
3. Test Conclusion:
   a. At the conclusion of the Acceptance Test, using the generated
      punch list (or discrepancy list) the VA and the Contractor shall
      jointly agree to the results of the test, and reschedule testing
      on deficiencies and shortages with the Resident Engineer. Any
      retesting to comply with these specifications will be done at the
      Contractor's expense.
   b. If the system is declared unacceptable without conditions, all
      rescheduled testing expenses will be borne by the Contractor.

E. Acceptable Test Equipment:
   1. The test equipment shall furnished by the Contractor shall have a
      calibration tag of an acceptable calibration service dated not more
      than 12 months prior to the test. As part of the submittal, a test
      equipment list shall be furnished that includes the make and model
      number of the following type of equipment as a minimum:
      a. Spectrum Analyzer.
      b. Signal Level Meter.
      c. Volt-Ohm Meter.
      d. Sound Pressure Level (SPL) Meter.
      e. Oscilloscope.
      f. Pillow Speaker Test Set (Pillow Speaker with appropriate load and
         cross connections in lieu of the set is acceptable).

4.3 WARRANTY

A. Comply with FAR 52.246-21, except that warranty shall be as follows:

B. Contractor’s Responsibility:
   1. The Contractor shall warranty that all provided material and
      equipment will be free from defects, workmanship and will remain so
      for a period of one year from date of final acceptance of the system
      by the VA. The Contractor shall provide OEM’s equipment warranty
      documents, to the Resident Engineer (or Facility Contracting Officer
      if the Facility has taken procession of the building), that
      certifies each item of equipment installed conforms to OEM published
      specifications.
   2. The Contractor's maintenance personnel shall have the ability to
      contact the Contractor and OEM for emergency maintenance and
      logistic assistance, remote diagnostic testing, and assistance in
      resolving technical problems at any time. This contact capability
shall be provided by the Contractor and OEM at no additional cost to the VA.

3. All Contractor maintenance and supervisor personnel shall be fully qualified by the OEM and must provide 2 copies of current and qualified OEM training certificates and OEM certification upon request.

4. Additionally, the Contractor shall accomplish the following minimum requirements during the Warranty Period:
   a. Response Time during the Warranty Period:
      1) The Resident Engineer (or Facility Contracting Officer if the system has been turned over to the Facility) is the Contractor’s only official reporting and contact official for MATV system trouble calls, during the warranty period.
      2) A standard work week is considered 8:00 A.M. to 5:00 P.M. or as designated by the Resident Engineer (or Facility Contracting Officer), Monday through Friday exclusive of Federal Holidays.
      3) The Contractor shall respond and correct on-site trouble calls, during the standard work week to:
         a) A routine trouble call within 1 working day of its report.
            A routine trouble is considered a trouble that causes a pillow speaker or cordset, 1 master IC control station, room station or emergency station to be inoperable.
         b) Routine trouble calls in critical emergency health care facilities (i.e., cardiac arrest, intensive care units, etc.) shall also be deemed as an emergency trouble call. The Resident Engineer (or Facility Contracting Officer) shall notify the Contractor of this type of trouble call.
         c) An emergency trouble call within 4 hours of its report. An emergency trouble is considered a trouble that causes a sub-system (ward), distribution point, terminal cabinet, or all call system to be inoperable at anytime.
      4) If a HDTV MATV component failure cannot be corrected within 6 hours (exclusive of the standard work time limits), the Contractor shall be responsible for providing alternate HDTV MATV equipment. The alternate equipment/system shall be operational within a maximum of 18 hours after the 6 hour trouble shooting time and restore the effected location.
operation to meet the system performance standards. If any sub-system or major system trouble cannot be corrected within one working day, the Contractor shall furnish and install compatible substitute equipment returning the system or sub-system to full operational capability, as described herein, until repairs are complete.

b. Required On-Site Visits during the Warranty Period:

1) The Contractor shall visit, on-site, as necessary, during the warranty period, to perform system preventive maintenance, equipment cleaning, and operational adjustments to maintain the system according the descriptions identified in this document.

2) The Contractor shall arrange all Facility visits with the Resident Engineer (or Facility Contracting Officer) prior to performing the required maintenance visits.

3) Preventive maintenance shall be performed by the Contractor in accordance with the OEM's recommended practice and service intervals during non-busy time agreed to by the Resident Engineer (or Facility Contracting Officer) and Contractor.

4) The preventive maintenance schedule, functions and reports shall be provided to and approved by the Resident Engineer (or Facility Contracting Officer).

5) The Contractor shall provide the Resident Engineer (or Facility Contracting Officer) a type written report itemizing each deficiency found and the corrective action performed during each required visit or official reported trouble call. The Contractor shall provide the Resident Engineer with sample copies of these reports for review and approval at the beginning of the Acceptance Test. The following reports are the minimum required:

a) The Contractor shall provide a monthly summary all equipment and sub-systems serviced during this warranty period to Resident Engineer (or Facility Contracting Officer) by the fifth (5th) working day after the end of each month. The report shall clearly and concisely describe the services rendered, parts replaced and repairs performed. The report shall prescribe anticipated future
needs of the equipment and systems for preventive and predictive maintenance.
b) The Contractor shall maintain a separate log entry for each item of equipment and each sub-system of the system. The log shall list dates and times of all scheduled, routine, and emergency calls. Each emergency call shall be described with details of the nature and causes of emergency steps taken to rectify the situation and specific recommendations to avoid such conditions in the future.
6) The Resident Engineer (or Facility Contracting Officer) shall convey to the Facility Engineering Officer, 2 copies of actual reports for evaluation.
   a) The Resident Engineer (or Facility Contracting Officer) shall ensure a copy of these reports is entered into the system’s official acquisition documents.
b) The Facility Chief Engineer shall ensure a copy of these reports is entered into the system’s official technical record documents.
C. Work Not Included: Maintenance and repair service shall not include the performance of any work due to improper use; accidents; other vendor, contractor, or owner tampering or negligence, for which the Contractor is not directly responsible and does not control. The Contractor shall immediately notify the Resident Engineer or Facility Contracting Officer in writing upon the discovery of these incidents. The Resident Engineer or Facility Contracting Officer will investigate all reported incidents and render

4.4 TRAINING
A. Provide thorough training of the owner’s engineering and maintenance staff.
B. Provide the following minimum training times and durations:
   1. //24// hours prior to opening
   2. //24// hours during the opening week
   3. //24// hours for supervisors and system administrators

- - - E N D - - -
