BIM Model Harvesting

**Explanation:** AFCEE is harvesting BIM models for various facility types to be incorporated into the Facility Dynamic Prototypes program. These models will be utilized in the design of future MILCON projects for the purpose of increasing design efficiency and decreasing design/construction costs.

**BIM Requirements for Harvested Model(s):** The model shall include architectural work at a minimum. If other disciplines are developed by this stage of the design they should also provide models. Models shall be developed in Autodesk Revit 2009 native format and provided on DVD/CD-ROM.

**Deliverable(s):** The BIM model shall be submitted to AFCEE and addressed to Rick Sinkfield at the end of Schematic Design (20% completion). This is a separate deliverable from the required design deliverables described in the contract.
