A. OVERVIEW
Comply with Air Force Corporate Standards for Overview:
http://afcfs.wbdg.org/index.html

This Installation Facilities Standards (IFS) document is part of the Air Force Corporate Facilities Standards (AFCFS) program to assist bases in implementing and maintaining facilities standards as appropriate for efficient operations within the respective climate region. IFS fully replaces, consolidates and simplifies existing facilities standards documents, such as the Architectural Compatibility Plan (ACP) or ACGs, FEPs, etc., and organizes information using the same structure, or Table of Contents, as the AFCFS website.

IFS reflects the AFCFS' concepts of “Facility Hierarchy” (categorizing facilities into group numbers) and “Facility Quality” (assigning an appropriate level of quality to each group number) and applies these principles at the base level. Applicable DoD and Air Force criteria such as UFCs, AFI s, Memoranda, and UFGSs (Guide Specs) are referenced and linked within IFS to ensure the document is always current.

Navigating within this IFS is efficient and straightforward. Please use the interactive Table of Contents to locate subject matter, and click on the title of a section to access it. From any page, click on the “Back to Table of Contents” footer to return. Content is organized into 4 major sections: Installation Elements, Site Development, Facilities Exteriors and Facilities Interiors.

This IFS document begins as a fill-in PDF form, which is fully editable, and becomes a “living document” that can be regularly updated by base-level personnel following a format that is consistent across the Air Force. While the format is standardized, IFS content is customized for base operations and the local climate to ensure mission success while emphasizing reduced maintenance and reduced initial costs, life-cycle costs, energy use, and water use.

1. Conformance to Air Force Corporate Facilities Standards (AFCFS) and Installation Facilities Standards (IFS) are required by Air Force Instruction (AFI) 32-1023 and Air Force Memorandum. Please refer to the AFCFS website for links to documentation on current policy.

2. The IFS is a component plan of the Installation Development Plan (IDP) per Air Force Instruction (AFI) 32-7062 (replacing the Architectural Compatibility Plan). All military construction projects and Non-Appropriated Funds (NAF) facilities are required to comply with the IDP and its IFS component plan by AFI 32-1023. The Base Civil Engineer (BCE) maintains and implements the IDP and its component plans, to include the IFS.

3. Please refer to the AFCFS website as a portal to reference materials and requirements documents for design and construction projects (via links). Specific references to current DoD memoranda and Air Force criteria are updated periodically to provide the most current guidance and requirements. Programming, design and contract documents should list “current edition” for all reference and requirements documents. The documents in force at the date of execution of the design and/or construction contract shall be the governing version.

4. Advanced Modeling Requirements:
   For all Air Force projects requiring advanced modeling, to include 3D visualization, Building Information Modeling (BIM), facility data, quantity take-off, geospatial, etc., follow the Army standards. Refer to USACE Minimum Model Matrix (M3) and Project Execution Plan (PxE) which outline required model uses. Refer to CAD BIM Technology Center (Contract Requirements) for more information on M3 and PxE.

5. Joint Bases shall implement IFS under their Joint-Base designation with volume numbers for individual installations following the IFS Development Tool template. For example, for Joint Base Langley-Eustis, provide: Vol. 1 Langley AFB and Vol. 2 Fort Eustis.

A.01. FACILITY HIERARCHY
Comply with AF Corporate Standards for Facility Hierarchy (and subsections):
http://afcfs.wbdg.org/facility-hierarchy/index.html

A.02. FACILITY QUALITY
Comply with AF Corporate Standards for Facility Quality (and subsections):
http://afcfs.wbdg.org/facility-quality/index.html

A.03. FACILITY DISTRICTS
Comply with AF Corporate Standards for Facility Districts (and subsections):
http://afcfs.wbdg.org/facility-districts/index.html
Note: Apply the base-wide standards in this IFS for Installation Elements, Site Development, Facilities Exteriors and Facilities Interniors (products, materials, color, etc.). Following application of the base-wide standards, refer to the Appendix and apply any additional requirements specifically related to the Facility District.
B. INSTALLATION ELEMENTS
Comply with Air Force Corporate Standards for Installation Elements:
http://afcfs.wbdg.org/installation-elements/index.html

B.01. COMPREHENSIVE PLANNING
Comply with Air Force Corporate Standards for Comprehensive Planning:
http://afcfs.wbdg.org/installation-elements/comprehensive-planning/index.html

B01.1. Installation Development Plan (IDP)

- Applicable  N/A  Select number of graphics / images (large: 800 px x 440 px) to insert 1
- Applicable  N/A  Small graphics do not apply

Department of Defense, Department of the Air Force and Air Force Base Criteria

1. The Base Civil Engineer is responsible for developing, maintaining and implementing the installation’s Comprehensive Planning documents and to ensure that the Installation Development Plan (IDP) is prepared, maintained, and implemented following AFI 32-7062. The base is also required to provide and maintain Installation Facilities Standards (IFS) as a Component Plan of the base’s Installation Development Plan (IDP).

B01.1.1. IFS Component Plan of IDP

- Applicable  N/A  Large graphics do not apply
- Applicable  N/A  Small graphics do not apply

The IFS is a multipurpose tool that shall be used throughout the entire planning, programming, and design process, from inception to project completion for any project on base. While architectural designers are the primary users of the plan, it must
also be used by project managers, programmers, planners, engineers, maintenance and operations personnel, self-help personnel, and the Architectural Compatibility Review Board (ACRB). Any items purchased for the exterior of buildings - including those purchased with impact cards - must conform to the requirements prescribed in the IFS.

Fairchild AFB has a foundation for architectural unity. The existing architecture depicts a predominant materials palette and a consistency of material detailing. The following design standards are applicable to the entire installation, to both host and tenant organizations.

The goal is to design excellent facilities that satisfy all of these priorities: The first priority is to achieve architectural compatibility for Fairchild Air Force Base as a whole. The second priority is compatibility within an architectural setting or sub-area. Outstanding designs for individual buildings or facilities are the third priority.

Site planning and site development issues contribute significantly to the architectural context. Building setbacks and the scale and definition of space are as fundamental to creating architectural compatibility as consistent facade designs. Develop exterior spaces to promote pedestrian use and activity and to connect buildings and the landscape. Use the landscape with other visual elements to create greater continuity.

**About the Architectural Compatibility Review Board (ACRB):**
- The ACRB is the installation approval authority for all designs and visual features on the installation. Projects with design features or proposals that compete with standards or methods as prescribed by the IFS or would otherwise establish a new precedent, require ACRB approval.
- The ACRB is organized by the Base Civil Engineer (BCE).
- The chairperson as appointed.
- Members include the base architects, community planner, engineering flight chief, operations flight chief, project manager, and others as determined by the chairperson.
- The base architect, engineering disciplines, and project manager review designs regardless of ACRB involvement.
- The ACRB meets as required.
- Most projects, regardless of size, must be approved by the ACRB. (The chairperson makes the determination on review requirements).
- Design projects are submitted to the ACRB by the base-assigned project manager.

**B01.1.2. Brief History of Base**

☐ Applicable  ☒ N/A  Large graphics do not apply

☑ Applicable  ☒ N/A  Select number of graphics / images (small: 250 px x 188 px) to insert  3

![The arrival of Gen. Fairchild](image1.png)

![Gen. Fairchild Portrait Unveiling](image2.png)

![Dedication Ceremony, 1951](image3.png)

Since 1942, Fairchild Air Force Base has been an integral part of our nation's defense strategy; first as a key WWII repair and supply depot, then as a Strategic Air Command bomber, tanker and ICBM wing during the Cold War and, finally, as an Air Mobility Command air refueling wing supporting contingency operations around the world. Today, Fairchild's aircraft and personnel make up the backbone of the Air Force's tanker fleet on the west coast. This Center of Excellence for Air Refueling is the home of the Air
Force’s premier tanker base and survival training school house. However, it must be noted that it was the vision of Spokane's city leaders and the support of the people of Spokane that made the base a reality.

The 92d Air Refueling Wing, the 141st Air Refueling Wing, the 336th Training Group, and the associate units at Fairchild, and the Spokane community have forged an impressive relationship over the years. This team, “Team Fairchild,” has earned a well-deserved reputation for excellence. Team Fairchild will continue to meet future challenges in its usual fashion, and in so doing will preserve the legacy of excellence that began over 75 years ago by providing responsive, precise air refueling and operational support for a full range of military operations.

**B01.1.3. Future Development**

- Applicable  N/A   Large graphics do not apply

- Applicable  N/A   Small graphics do not apply

  2. Address all future development under the Installation Development Plan (IDP).

**B02. STREET ENVELOPE STANDARDS**

**B02.1. Hierarchy of Streets**

- Applicable  N/A   Large graphics do not apply

- Applicable  N/A   Small graphics do not apply

  1. Develop and evolve a hierarchical transportation network of arterial, collector and local streets following UFC 3-201-01 and its industry references.

  2. Provide consistent functionality throughout the installation and a level of visual quality relating to the adjacent Facility Group number.

  3. Routes along facilities in Group 1 may have materials, finishes and features with a higher visual quality than Groups 2, 3 and 4. Reduce maintenance requirements by installing highly durable materials and finishes in routes along Group 3 industrial facilities.

  4. Special routes may have a visual quality comparable to those along facilities in Group 1.

  5. Create and maintain arterials with two lanes of traffic in each direction with landscaped or paved medians as applicable to the local climate and adjacent facility group designation / land use.

  6. Minimize stops and turns along arterials. Eliminate on-street parking along arterials and collector streets.

  7. Connect arterials to local streets with appropriately scaled collector streets.

  8. Provide appropriate landscape setbacks and pedestrian buffers along all streets.

  9. Minimize and consolidate curb cuts along streets.
10. Ensure access for emergency and service vehicles.

11. Define bicycle traffic routes in the Installation Development Plan or its applicable component plans.

12. Define appropriate force protection features, site furnishings, signs, lighting, utilities, and paving in the IFS.

**B02.1.1. Arterial Streets**

- **Applicable**  -  **N/A**  -  Select number of graphics / images (large: 800 px x 440 px) to insert 1
- **Applicable**  -  **N/A**  -  Select number of graphics / images (small: 250 px x 188 px) to insert 1

Primary roadways are developed as boulevards and contain two lanes of traffic in each direction often with planted medians.
Minimize stops and turns, and eliminate on-street parking.
Parking and service access curb cuts are discouraged.
Keep parking areas and buildings away from the road edge.

If base-level criteria is unavailable, the following dimensions may be used:
Travel Lane (a): 12’  Median (b): N/A  Curb and Gutter (c): 2’  Sidewalk / Landscape (d): 10’  Setback (f): Min. 35’ or per ATFP requirements.

UFC 3-201-01, UFC 3-250-01

B02.1.2. Collector Streets

Applicable  N/A  Select number of graphics / images (large: 800 px x 440 px) to insert  1
Applicable  N/A  Select number of graphics / images (small: 250 px x 188 px) to insert  1
Secondary roadways are feeder streets from access roads to primary roads.

- On-street parking is discouraged.
- Keep off-street parking areas away from the road edge.
- Minimize the number of curb cuts from driveways and area entrances.

**If base-level criteria is unavailable, the following dimensions may be used:**
Travel Lane (a): 12’   Median (b): N/A   Curb and Gutter (c): 2’   Landscape (d): 10’   Sidewalk (e): 6’   Setback (f): 15’ or per ATFP requirements

UFC 3-201-01, UFC 3-250-01
B02.1.3. Local Streets

Applicable  N/A  Select number of graphics / images (large: 800 px x 440 px) to insert  1

Applicable  N/A  Select number of graphics / images (small: 250 px x 188 px) to insert  1

Travel Lane (a): 11’  Median (b): N/A  Curb and Gutter (c): 1.5’  Landscape (d): 15’  Sidewalk (e): 6’

Tertiary roadways are the narrowest and slowest public streets and provide access to individual sites or parking areas.

- On-street parking and curb-cuts for driveways, parking lot entrances, and services drive entrances are allowed.
- Maintain capability for large vehicles such as fire trucks and moving vans.

If base-level criteria is unavailable, the following dimensions may be used:
Travel Lane (a): 11’  Median (b): N/A  Curb and Gutter (c): 1.5’  Landscape (d): 15’  Sidewalk (e): 6’  Setback (f): 15’ or per ATFP requirements
**B02.1.4. Special Routes**

- Applicable  
  Large graphics do not apply

- Applicable  
  Small graphics do not apply

  1. Develop all special routes consistently with those adjacent to Group 1 facilities.
  2. Service drives provide access for service vehicles to certain parts of a building or site.
  3. Combine service drives for several facilities where possible.
  4. Sidewalks can double as service drives; size and design accordingly.
  5. Maintain a setback between the building and service drive.
  6. Minimize the visual impact of service drives through correct placement of drives and landscape screening.

**B02.2. Hierarchy of Intersections**

- Applicable  
  Large graphics do not apply

- Applicable  
  Small graphics do not apply

  1. Provide a hierarchy of intersections to include arterial, arterial-collector, collector, collector-local and local following UFC 3-201-01 and its industry references.
  2. Passive systems such as traffic circles are preferred to active systems such as signalized intersections. Aggressively pursue passive systems to lower maintenance requirements and reduce energy use.
  3. Use a level of visual quality for an intersection equal to the quality found in the related streetscape, which corresponds to the adjacent Facility Group number.

**B02.2.1. Arterials**

- Applicable  
  Large graphics do not apply

- Applicable  
  Small graphics do not apply

**B02.2.2. Arterial/Collector**

- Applicable  
  Large graphics do not apply

- Applicable  
  Small graphics do not apply
B02.2.3. Collectors

- Applicable  N/A  Large graphics do not apply
- Applicable  N/A  Small graphics do not apply

UFC 3-201-01, UFC 3-250-01

B02.2.4. Special Intersections

- Applicable  N/A  Large graphics do not apply
- Applicable  N/A  Small graphics do not apply

1. Develop all special intersections consistently with those adjacent to Group 1 facilities.

B02.2.5. Street Frontage Requirements

- Applicable  N/A  Large graphics do not apply
- Applicable  N/A  Small graphics do not apply

1. Consistently maintain open space buffers following B03.2.3. Preserves.
2. Refer to C06.1.7. Streetscape Landscaping for planting and screen wall requirements along street frontage.

B02.2.6. Sight Lines

- Applicable  N/A  Large graphics do not apply
- Applicable  N/A  Small graphics do not apply

1. Provide adequate sight lines for an effective and safe traffic operation per American Association of State Highway and Transportation Officials (AASHTO) standards and local municipality guidelines.

B02.3. Street Elements

- Applicable  N/A  Large graphics do not apply
- Applicable  N/A  Small graphics do not apply

1. Emulate the streetscape area's pre-development hydrology using passive and active design features to help sustain the adjacent regionally appropriate landscape. Coordinate with the base Stormwater Management Plan.
2. Employ systems, materials and techniques to maximize streetscape sustainability. Consider pervious paving and reflectivity of surfaces appropriate for the local climate.
3. Install at-grade curbing and/or raised-profile curb and gutter as applicable to direct stormwater to bioswales and rain gardens as source water for vegetation. Do not paint concrete curbing.
4. Provide all on-site utility service lines and equipment below grade when adjacent to Facility Group 1. In routes along Group 2, 3 and 4, when mounting elements such as utility cabinets, communications equipment and water valves above grade is unavoidable, paint these consistently and provide visual screening following Installation Facilities Standards (IFS).

5. Provide traffic control devices including access control point/entry control facility signs, speed limit signs and street name signs following the current edition of the Manual on Uniform Traffic Control Devices (MUTCD) per UFC 3-120-01.

6. Follow UFC 3-120-01 for directional and wayfinding signs and address both vehicular and pedestrian traffic.

7. Reduce energy consumption and reduce maintenance requirements by providing street lighting only when functionally required to ensure safety and to address antiterrorism following UFC 4-010-01. Ensure the quality and quantities of lighting and fixtures are appropriate for the adjacent Facility Group number.

B02.3.1. Paving

☐ Applicable ☐ N/A Large graphics do not apply

☐ Applicable ☐ N/A Small graphics do not apply

1. Use asphalt paving for all primary, secondary, and access roadways.
2. Use concrete paving in loading areas, dumpster enclosures, and sites used by heavy vehicles.
3. Gravel surfacing may be used on patrol roads and outlying sites only.
4. Incorporate a concrete apron where gravel roads meet paved roads.
5. All patching shall match adjacent materials.

B02.3.2. Curb and Gutter

☐ Applicable ☐ N/A Large graphics do not apply

☐ Applicable ☐ N/A Small graphics do not apply

1. Comply with base CE standards for all 6-inch integrated concrete curb and gutter for all roadways in developed areas.
2. Patrol roads and service drives in outlying areas may not require curb and gutter, with ACRB approval.
3. Wheel stops in lieu of curbs are not allowed.
4. Do not paint concrete curbs.

B02.3.3. Utility Service Elements

☐ Applicable ☐ N/A Large graphics do not apply

☐ Applicable ☐ N/A Small graphics do not apply
1. Provide all utility service lines below grade; when mounting elements (such as utility cabinets, communications equipment and water valves) above grade is unavoidable, paint these consistently and provide visual screening following Site Development, Landscaping.

2. Do not cut pavements to install utilities. Avoid free standing utility structures, and use underground vaults for equipment where possible.

3. Locate fire hydrants at least 5 feet away from other structures. Maintain a 30-inch clear area. Fire Hydrants shall be painted based on flow rates.

4. Locate pad-mounted equipment in less visible areas and screen with landscaping or screen walls.

**B02.3.4. Traffic Signs**

- Applicable  N/A  Large graphics do not apply
- Applicable  N/A  Small graphics do not apply

1. Refer to Exterior Signs, Colors and Types for Traffic Control Devices, which includes signs.

**B02.3.5. Street Lighting**

- Applicable  N/A  Large graphics do not apply
- Applicable  N/A  Small graphics do not apply

1. Refer to the Lighting section for appropriate applications along streets.

**B02.3.6. Other**

- Applicable  N/A  Large graphics do not apply
- Applicable  N/A  Small graphics do not apply

Crosswalks and Ramps:

1. Ensure that all paths lead to the safest crossing point possible, and cross roadways at 90-degree angles.

2. Incorporate ADA accessible curb ramps and crosswalk markings into all crosswalks.

3. Crosswalks should be designated with striping.

4. Construct all concrete curb ramps with a waffle stamp pattern and flared curb ramps.

5. Provide for adequate drainage away from the ramp or by drainage grates.

UFC 3-201-01, UFC 3-250-01

**B03. OPEN SPACE / PUBLIC SPACE**

Comply with Air Force Corporate Standards for Installation Elements:
http://afcfs.wbdg.org/installation-elements/index.html
Comply with AF Corporate Standards for Open Space / Public Space: 

B03.1. Plazas, Monuments and Static Displays

☐ Applicable  ☐ N/A  Large graphics do not apply

☐ Applicable  ☐ N/A  Select number of graphics / images (small: 250 px x 188 px) to insert  3

Image Tool 250 x 188

In Memoriam Monument  Cold War Memorial  Flagpole Monument

1. Natural features and culturally or historically significant features or events may be recognized and acknowledged with physical elements such as plazas, monuments and static displays. However, limit these elements on the base to ensure judicious use of resources and to reduce ongoing maintenance requirements.

2. Design highly durable plazas, monuments and static displays with a level of quality comparable to Facility Group 1.

3. Link plazas, monuments and static displays to the pedestrian circulation system. Install landscaping, site furnishings and lighting appropriate for the application and local climate following Installation Facilities Standards (IFS).

4. Select systems, products and materials for paving, walls, and structures following IFS.

B03.1.1. Paved Plazas

☐ Applicable  ☐ N/A  Large graphics do not apply

☐ Applicable  ☐ N/A  Small graphics do not apply

1. Mitigate heat island by providing high-albedo, shaded plazas. Pervious pavers shall be used on all plazas and courtyards in Facility Groups 1 and 2 not subject to severe freeze-thaw cycles. The designer shall incorporate appropriate expansion and construction joints.

2. Use standard brick pavers or colored concrete as a unifying theme for plazas and courtyard paving. Use manufacturer standard patterns for concrete pavers.

3. Concrete may be stamped to accent the design.
B03.1.2. Sculptures, Markers and Statuary

☐ Applicable ☐ N/A Large graphics do not apply

☐ Applicable ☐ N/A Small graphics do not apply

1. Relate new sculpture, markers and statuary to the base's architectural design theme. Generally limit these elements to frequently used locations adjacent to Facility Group 1 and highly traveled community pedestrian spaces.

2. Consider entry gates as possible sites for new displays.

3. All proposed memorials shall follow AFI 36-3108 and be limited to highly deserving individuals or groups as deemed appropriate by the installation leadership. Living memorials (tree plantings / etc.) are discouraged due to added maintenance requirements.

4. When sculpture requires a base, match the materials and / or color palette of adjacent buildings.

5. Use direct or indirect lighting to accentuate features or enhance an intended effect.

6. Ensure that all sculpture, markers and statuary are honorable and inspiring, provide a sense of place, positively contribute to the base's visual quality, and encourage pride for the community and the US Air Force.

B03.1.3. Static Display of Aircraft

☐ Applicable ☐ N/A Large graphics do not apply

☐ Applicable ☐ N/A Select number of graphics / images (small: 250 px x 188 px) to insert

1. Follow IFS base-wide standards for all elements of the display area with specific attention to traffic sight lines, pedestrian circulation, site furnishings, signs, and lighting. Address requirements for the Facility District as well.

2. Generally locate concrete base/foundation structures for static displays below grade.

3. At static displays where pedestrian paths are provided, a minimum of one trash receptacle and one bench shall be provided. Receptacle and bench design must conform to IFS requirements.
1. Provide formal spaces for parade and review functions, recreational areas and parks following the base's Installation Development Plan (IDP) and Installation Facilities Standards (IFS). Refer to the Site Furnishings topic for additional information.

2. Maintain preservation areas following the IDP and IFS.

3. Comply with UFC 4-010-01 DoD Minimum Antiterrorism Standards for Buildings and UFC 4-022-03 Security Fences and Gates for all elements associated with the base's gates and perimeter fence.

4. Identify and describe base-wide utility corridors in the IDP.

5. Base-wide utility infrastructure shall be inconspicuous. Bury all utility service lines below grade.

6. Follow the requirements of this IFS regarding all utility structures and service lines located above grade that visually impact the installation.

7. Where screening of utility equipment and structures is provided, allow adequate and proper clearance for safety and maintenance.

8. Reduce visual clutter and visual impact of the following items through a combination of careful placement, screen walls, landscaping and painting:
   - Electrical switch-stations.
   - Sewage lift stations.
   - Water well pumps, storage tanks and/or related structures.
   - Gas piping, meters and similar incidental items.
   - Above ground fuel storage tanks.
   - Any ground-mounted freestanding utility item exposed to view.

9. Larger structures such as electrical switch-stations, sewage lift stations, fuel storage tanks and mechanical/electrical equipment shall be screened from view, using materials, forms, and colors in the screen walls which match those respective design elements present at adjacent buildings.

10. Paint above-ground equipment and associated components such as electrical piping or exposed plumbing lines dark bronze.

11. Maintain currently buried utility service lines as a visual asset.
12. Bury the following exposed above-grade items in future projects when economically feasible:

- Electrical power grid and service lines.
- Telephone lines.
- Cable TV lines.
- Communications lines.
- Exterior lighting service lines.
- Any similar system of above-ground lines serving the base.

13. Consolidate and enclose service utility lines in underground utility corridors when feasible. Create routes along the inside edge of parking lot islands.

**B03.2.1. Parade Grounds**

- Applicable  N/A  Large graphics do not apply

1. Follow UFC 3-201-02, Appendix B for the planning and design process and criteria for parade grounds.

2. Establish and maintain parade grounds only where there is a confirmed need and provide landscape materials appropriate for the locale following IFS.

3. Bleachers may be installed only when there is a documented requirement at parade grounds. Nonferrous metals that do not require painting or going maintenance are preferred. The Base Civil Engineer shall determine quantities, sizes, and products on a case basis.

**B03.2.2. Parks**

- Applicable  N/A  Large graphics do not apply

1. Bleachers may be installed only when there is a documented requirement at parks and fields for recreational events. Follow guidance under Parade Grounds.

2. Picnic pavilions may be provided in parks where there is a documented need. Locate pavilions centrally among facilities being served to create multipurpose use.

3. Construct new pavilions with brick columns and low-sloped gable, standing seam dark brown metal roofs at high-visibility locations.
4. Use manufactured pavilions in low-visibility locations with ACRB approval only. Wood gazebos are not allowed.

**B03.2.3. Preserves**

☐ Applicable  ☐ N/A  Large graphics do not apply

☐ Applicable  ☐ N/A  Small graphics do not apply

1. Preserve areas adjacent to runways, taxiways, aprons, golf course roughs, storage areas, antenna facilities, and ammunition storage areas, as open space.

2. Provide minimal maintenance with mowing as needed for controlling bird behavior for airfield safety, or eliminating fire hazards.

**B03.2.4. Perimeter Fence**

☐ Applicable  ☐ N/A  Large graphics do not apply

☐ Applicable  ☐ N/A  Small graphics do not apply

1. Design, install and maintain the base's perimeter fence following UFC 4-022-03.

2. Perimeter fencing shall respond to the site context and use combinations of vinyl-covered chain link, decorative metal, or brick per ACRB direction.

3. Stringently comply with AT / FP requirements following UFC 04-010-01 for all spaces adjacent to the base's perimeter fence and all gates.

4. Fencing, gates and other elements that are associated with the main gates shall be a level of quality equivalent to Facility Group 1. Wrought iron fencing may be used for high visibility sites.

5. Maintain a positive visual quality along the traffic corridor on both sides of the main gates. Specifically address pedestrian access, circulation and common areas.

6. Wood or white vinyl is allowed only in the Facility Group 4.
C. SITE DEVELOPMENT

Comply with Air Force Corporate Standards for Site Development:
http://afcfs.wbdg.org/site-development/index.html

C01. SITE DESIGN

Comply with Air Force Corporate Standards for Site Development:
http://afcfs.wbdg.org/site-development/index.html

Comply with AF Corporate Standards for Site Design / NEPA:
http://afcfs.wbdg.org/site-development/site-design-nepa/index.html

C01.1. Site Design Considerations

☐ Applicable  ☑ N/A  Large graphics do not apply

☐ Applicable  ☐ N/A  Small graphics do not apply

1. Collect documentation to validate approvals and completion of the NEPA process.

2. Ensure site design compliance with the Installation Development Plan (IDP) and its component plans and Installation Facilities Standards (IFS).

3. Develop a strong relationship between buildings and exterior spaces. Articulate building facades to create areas of shade and shadow.

4. Promote integrated design with on-site solutions such as engineered small-scale hydrologic controls verses base-wide infrastructure; consider open space, natural features, bioswales, building roofs, streets, and paved surfaces.

5. Limit the impact of development on land and water resources. All site elements and infrastructure shall reinforce an image of sustainability, with reduced energy demand, renewable-energy usage, and water conservation.

6. Consider energy conservation during site design for the following categories: building and site lighting, auxiliary systems and equipment (refrigerators, elevators, etc.), building envelope, electric power and distribution, HVAC systems and equipment, service hot water, energy management (metering, EMCS).

7. Coordinate on-site renewable-energy systems and components to minimize area requirements and maximize efficiencies. Appropriately buffer and screen these and other mechanical systems and equipment.

8. New building projects should preserve open space and protect natural habitat.

9. Conform to existing topography to the greatest extent possible and use slopes to increase site and building efficiencies. Design sites to minimize irrigation and impacts to stormwater runoff.

10. Carefully study new project sites to identify the character of adjacent buildings, streets, landscaping, and site design elements. Reinforce the existing character in new site design.

11. Consider relationships to adjacent facilities and district / centralized heating and cooling infrastructure and cost effectively connect building systems to harvest heat, grey water or other beneficial byproducts.

12. Minimize existing and planned obstructions from landscaping, structures, topography, and adjacent developments to preserve solar access and natural ventilation.

13. Purposefully integrate service access, receiving and storage areas to eliminate the need for visual screening. Combine functions whenever possible to avoid a proliferation of small independent structures.

14. Appropriately connect to the base network of streets, sidewalks and trails using drive aisles, parking areas, walkways, paths, and bicycle routes addressing both vehicles and pedestrians.
15. Applicably coordinate heat island mitigation in paving and roof designs when implementing an integrated approach to stormwater management.

16. Consider the location of “Designated Tobacco Areas.”

**C01.2. Building Orientation**

- Applicable  N/A  Select number of graphics / images (large: 800 px x 440 px) to insert  1
- Applicable  N/A  Select number of graphics / images (small: 250 px x 188 px) to insert  6

![Conceptual Site Analysis and Site Design Diagram](image)

**Driving Factors**

- Optimal solar orientation of the building
- Main entrance from Peppermill street
- Addressing the orientation of the future AOG
- Maximize the daylight & desirable views
- Existing vegetation and trees
- Visibility of the new facility from main roads
- Meet the required AIFP standoff distance
- Separation between staff/public/materials entrance
- Required parking spaces for public and staff
- Create a unified campus
- Outdoor heating environment
- Implementation of landscape zones A, B, C & D

![Local Solar Data](image)

![Local Climate Data](image)

![Site Data](image)
1. Ensure the site will accommodate optimum requirements for building orientation, which is with the long axis parallel to the east/west direction for rectilinear CONUS buildings.

2. Meet Installation Facilities Standards (IFS) requirements for the locations of the building's passive and renewable-energy systems and exterior shading systems as applicable.

3. Locate the building(s) and permitted ancillary structures to promote solar gain, solar shading, natural ventilation, rainwater harvesting, wind buffering and other beneficial passive systems. Consider natural ventilation during the design of HVAC systems.

4. Consider relationships to adjacent sites and their facilities and infrastructure, and cost effectively integrate building systems to harvest heat, grey water or other beneficial byproducts.

5. Consider the “public side” of the building, its views and the location of the main entrance.

**C02. UTILITIES**

Comply with AF Corporate Standards for Site Development:  
[http://afcfs.wbdg.org/site-development/index.html](http://afcfs.wbdg.org/site-development/index.html)

Comply with AF Corporate Standards for Utilities:  
C02.1. Utility Components

1. Provide all on-site utility service lines below grade; when mounting elements (such as utility cabinets, communications equipment and water valves) above grade is unavoidable, paint these consistently with their hosting wall colors and provide visual screening following Installation Facilities Standards (IFS). Exterior surface-mounted utility con lines, or equipment are NOT allowed (except meters and control devices).

2. Provide installation of utility infrastructure to support near term and future electric vehicle charging stations.

3. Define all service entry points into the building and route distribution below grade into an interior space within the facility; exposed conduits, cables and wires on exterior walls are not permitted for Facility Group 1.

4. Include consideration of appropriate placement of meters in support of Automated Revenue Management Services (ARMS). Locate mechanical equipment on the least public side of the building.

5. Limit exterior mechanical distribution systems such as exterior steam, chilled water, and hot water distribution to Group 3 facilities; when required for Group 1 and 2 facilities integrate with the architecture and provide visual screens following IFS.

6. Direct roof drainage to underground collection when feasible or provide splash blocks / paved channels to intercept roof drainage at grade.

7. In remote locations, paint freestandpipes and above-ground utility system components Spanish Moss.

8. Fire hydrants shall be painted in accordance with UFC 3-600-01.

9. Collocate coaxial and telephone extecomponents and entry points. Align all communication components with one another on the horizontal and vertical plane.

C03. PARKING AREAS

Comply with AF Corporate Standards for Site Development:
http://afcs.wbdg.org/site-development/index.html

Comply with AF Corporate Standards for Parking Areas:
http://afcs.wbdg.org/site-development/parking-areas/index.html
C03.1. Configurations and Design

- Evaluate adjacent sites and cost-effectively consolidate parking areas to maximize efficient use; ensure all areas meet accessibility guidelines. Parking layout must address accessibility, maintenance, snow removal, and safety issues.

- Generally envision on-site parking as a series of small connected singular areas selectively placed around the facility served, rather than a single large area; buffer parking areas from the facility main entrance with a transition space and provide drop-offs to decrease close-in parking. Comply with IFS standards while meeting ATFP requirements. Reduce large parking areas with landislands and planting strips.

- Integrate at-grade and raised-profile curbing, permeable paved areas, and parking islands with the stormwater system and direct stormwater to bio-swales and rain gardens as source water for regionally appropriate native vegetation.

- Define pedestrian access with approved hardscape and provide shading along the primary path from the parking area to the main entrance of the building.

- Coordinate suitable landscape or barriers integrated with walls and fences to ensure adequate force protection.

- Accessible parking spaces shall be marked according to UFC 3-120-01 and its references in ABAAS and the MUTCD. Use the 90-degree parking configuration when possible.

- Consider locations and requirements of near term and future electric vehicle charging stations.

- Designate preferred parking spaces for electric vehicles and carpools near the main entrance.

- Reserved parking is discouraged except for Facility Group 1. Reserved parking shall be designated by rank or title with curb-mounted signs.

- On-street parking is discouraged except in multi-use areas. When used, provide approved on-street parking configurations following UFC 3-201-01.

- Access and service drives should accommodate the largest vehicle serving the facility.

C03.1.1. Paving and Striping

- Consider locations and requirements of near term and future electric vehicle charging stations.
Facility Group 1 paving materials shall be as follows.
Primary: Asphaltic concrete
Secondary: Concrete
Accent: N/A

Facility Group 2 paving materials shall be as follows.
Primary: Asphaltic Concrete
Secondary: N/A
Accent: N/A

Facility Group 3 paving materials shall be as follows.
Primary: Concrete where operationally required
Secondary: Asphalitic Concrete
Accent: N/A

Facility Group 4 paving materials shall be as follows.
Primary: Concrete
Secondary: N/A
Accent: N/A

1. All new parking lots in Groups 1 and 2 shall be constructed of asphalt paving. Concrete paving shall be used in Groups 3, and where required for heavy vehicles, motorcycle parking, and where fuel spills may occur.

2. Cost-effectively provide light-colored concrete to reduce heat island effect; otherwise install asphaltic concrete paving. Dirt, gravel, and grass lots are not allowed.

3. Use consistent striping, angles and stall sizes in all parking areas.

4. All parking shall be marked with white stripes of paint or applied vinyl coatings. Red or yellow markings shall only be used for safety purposes and must be kept to a minimum. All lines shall be four inches (4") wide.

C03.1.2. Curbing

- Applicable
- N/A

Select number of graphics / images (small: 250 px x 188 px) to insert

![Image Tool 250 x 188]

```
11 1/2"
11 1/2"
12"
6"
PORTLAND CEMENT CONCRETE

"Rolled" Curb

Conventional Barrier Curb
```
Facility Group 1 curbing / edging materials shall be as follows.

Primary: Concrete, rolled curb
Secondary: N/A
Accent: N/A

Facility Group 2 curbing / edging materials shall be as follows.

Primary: Concrete, rolled curb
Secondary: N/A
Accent: N/A

Facility Group 3 curbing / edging materials shall be as follows.

Primary: Concrete, rolled curb
Secondary: N/A
Accent: N/A

Facility Group 4 curbing / edging materials shall be as follows.

Primary: Concrete, rolled curb
Secondary: N/A
Accent: N/A

Basewide curbing shall consist of concrete rolled curbing.

1. Define all parking lots with either raised profile or at-grade curbing to promote drainage and protect paving edges. All raised curbs shall be concrete, and shall be the rolled (mountable) type. Do not paint concrete curbs.

2. Integrate curbing to direct stormwater to bioswales and rain gardens as source water for regionally appropriate native vegetation.

3. Wheel stops are not permitted except at locations where car bumpers could contact adjacent items such as poles, signs or pedestrians.

4. Asphalt curbs, wood timbers, and precast wheel stops are prohibited.

C03.1.3. Internal Islands and Medians

☐ Applicable ☐ N/A Large graphics do not apply

☐ Applicable ☐ N/A Select number of graphics / images (small: 250 px x 188 px) to insert 1

Image Tool 250 x 188

Median serves as a visual break

1. Install landscape islands and medians as visual breaks, to reduce heat island effects and to accommodate bioswales and rain gardens with consideration for snow removal. Coordinate suitable landscape or barriers integrated with walls and fences to ensure adequate force protection.

2. Provide planting medians for every four rows of vehicles and paver islands for every 20 stalls. Coordinate with snow removal operations.
3. When lighting is necessary, contain fixture bases within medians or internal landscape islands. Coordinate layout for light poles with the islands and minimize their number to provide the required illumination.

4. Provide designated areas for pedestrian cross traffic.

**C03.2. Parking Structures**

- **Applicable**
  - **N/A**
  - Large graphics do not apply

- **Applicable**
  - **N/A**
  - Small graphics do not apply

1. Parking structures are not used at Fairchild AFB due to both, the availability of land and the high costs associated with constructing structured parking.

**C03.3. Connectivity**

- **Applicable**
  - **N/A**
  - Large graphics do not apply

- **Applicable**
  - **N/A**
  - Small graphics do not apply

1. Refer to the Installation Development Plan (IDP) for locations of transit stops and pedestrian and cycling networks; provide appropriately sized sidewalks and bike paths to connect facilities and users to these networks.

2. Provide amenities such as rain and shade shelters, trees, and benches to encourage and facilitate use of public transportation.

3. Evaluate the IDP for the current and planned network of roads and optimally develop vehicular access to and from the site.

**C04. STORMWATER MANAGEMENT**

Comply with AF Corporate Standards for Site Development:
http://afcfs.wbdg.org/site-development/index.html

Comply with AF Corporate Standards for Stormwater Management:

**C04.1. Stormwater Requirements**

- **Applicable**
  - **N/A**
  - Large graphics do not apply

- **Applicable**
  - **N/A**
  - Small graphics do not apply

1. Design all stormwater systems including retention ponds, detention areas, channels, etc. as on-site amenities that are consistent with natural systems and drainage patterns, that help sustain the base landscape with beneficial functionality and that provide aesthetic appeal; coordinate with the base Stormwater Management Plan.

2. Incorporate bioswales into the design of all roadway, parking and facility roof systems to enhance water quality and support the overall stormwater system.

3. Permeable paving may be used in areas that are not subjected to severe freeze-thaw cycles, and will be approved on a case basis.

4. Give consideration to rainwater harvesting and storage that is attached to the building’s roof drain systems to support grey water irrigation; consider freeze protection for winter months.
5. When underground drainage systems are required establish a maintenance program to include removal of sediments and debris; inspect joints seasonally for alignment to prevent leakage and the development of voids and surface failures.

C05. SIDEWALKS, BIKEWAYS AND TRAILS
Comply with AF Corporate Standards for Site Development:
http://afcfs.wbdg.org/site-development/index.html
Comply with AF Corporate Standards for Sidewalks, Bikeways and Trails:
http://afcfs.wbdg.org/site-development/sidewalks-bikeways-trails/index.html

C05.1. Circulation and Paving
☐ Applicable  ☐ N/A  Large graphics do not apply

☐ Applicable  ☐ N/A  Select number of graphics / images (small: 250 px x 188 px) to insert  3

Facility Group 1 sidewalks, plazas, and courtyards paving materials shall be as follows.
Primary: Concrete
Secondary: Concrete Edging
Accent: Colored Concrete

Facility Group 2 sidewalks, plazas, and courtyards paving materials shall be as follows.
Primary: Concrete
Secondary: Concrete Edging
Accent: N/A

Facility Group 3 sidewalks, plazas, and courtyards paving materials shall be as follows.
Primary: Concrete
Secondary: N/A
Accent: N/A

Facility Group 4 sidewalks, plazas, and courtyards paving materials shall be as follows.
Primary: Concrete
Secondary: N/A
Accent: N/A

1. Maintain efficient geometry and accessibility to connect building entrances to adjacent parking areas and activity areas and to the base transportation system following ATFP. Efficiently use materials to optimize life-cycle costs and to minimize maintenance.
2. Generally conform horizontal layouts of sidewalks to the geometric configuration of adjacent buildings, streets, parking lots, waiting shelters, and other adjacent related site amenities. Occasional meanders and/or jogs may be included to capture views, to coordinate with landscaping or accommodate site constraints.

3. Walks in parking areas shall provide a direct path using "safe islands" and "peninsulas" to encourage safety. Walks parallel to streets shall follow streetscape guidelines. Clearly mark pedestrian crossings at vehicular routes.

4. Mitigate heat island by providing high-albedo, shaded sidewalks. Pervious pavers may be used on a case basis. The designer shall incorporate appropriate expansion and construction joints.

5. Only experienced contractors will install pervious pavements.

6. Consider an integrated approach that could include stormwater management (permeable surfaces) and complement the design of the storm drainage system when appropriate.

7. Pedestrian paths should be at least 5’ in width to allow for comfortable side-by-side walking.

8. Sidewalks leading to a building main entrance and at the interior of parking lots shall be a minimum width of 6’. Walks greater than 10’ wide may be used at high-density pedestrian areas where volumes of traffic justify added material.

9. Where cars park adjacent and head-in to the sidewalk and wheel stops are not used, such perimeter walks shall be increased to a minimum width of 8’ to accommodate overhangs of the parked vehicles.

10. All sidewalks shall have positive drainage to prevent ponding of water or ice accumulation with slopes ranging from 2.1% to 4.2%. Walks with a slope greater than 4.2% shall be designed as ramps following accessibility guidelines. All walks shall have a minimum cross slope of 2.1%.

11. Maintain a minimum 3-foot wide landscaped parkway between curb and sidewalk.

12. Pavers shall conform to the following range of color: red or natural concrete.

13. Sidewalks shall use natural colored concrete with a broom finish and troweled edges.

14. Connect to the bicycle circulation system and provide bicycle parking with a suitable means for securing bicycles following IFS. Consider changing/shower facilities for use by cyclists. Emphasize pedestrian and bicycle circulation within Facility Group 4 areas and connect to community facilities.

15. Recreation trails:
   - Provide a minimum 6-foot paved width in a free form configuration that follows the contours or other natural features.
   - Separate the trail system from vehicular traffic by a minimum of 10 feet.
   - Take advantage of natural environments such as the natural wildlife area.
   - Incorporate activity generators, interpretive signs, and recreation opportunities.
   - Provide a 5-foot by 10-foot paved rest area approximately every mile. Include a bench and litter receptacle at each location.
   - Use asphaltic concrete for the trail system. In highly natural settings use compacted, crushed fines.

16. Refer to the Installation Development Plan for future trails, bicycle paths, and sidewalks.

C05.1.1. Ramps and Stairs

☐ Applicable  ☐ N/A   Large graphics do not apply

☐ Applicable  ☐ N/A   Small graphics do not apply
1. Use ramps instead of stairs for sidewalks, bikeways and trails and at all buildings where possible. Where steps are unavoidable, follow UFC 1-200-01 and its references to the International Building Code.

C05.1.2. Lighting

- Applicable  ○ N/A  Large graphics do not apply
- Applicable  ○ N/A  Small graphics do not apply

1. Provide lighting for all stairs and landings where traffic warrants.
2. Refer to the Lighting section for path lighting along sidewalks, bikeways and trails.

C06. LANDSCAPE

Comply with AF Corporate Standards for Site Development:
http://afcfs.wbdg.org/site-development/index.html

Comply with AF Corporate Standards for Landscape:
http://afcfs.wbdg.org/site-development/landscape/index.html

C06.1. Climate-based Materials

- Applicable  ○ N/A  Select number of graphics / images (large: 800 px x 440 px) to insert 1
- Applicable  ○ N/A  Select number of graphics / images (small: 250 px x 188 px) to insert 3

Evergreen shrubbery is paired with deciduous trees
1. Use only native, naturally occurring, drought-tolerant indigenous plant species (including grasses) appropriate for the locale to promote energy efficiency and water conservation, preserve drainage patterns, inhibit erosion, improve air quality, lower maintenance, and add beauty.

C06.1.1. Landscape Design Concept

☐ Applicable  ☐ N/A  Large graphics do not apply

☐ Applicable  ☐ N/A  Select number of graphics / images (small: 250 px x 188 px) to insert  2  

1. Develop, maintain and implement a climate-based plant list with landscape features using a regionally appropriate palette of materials to promote energy efficiency, preserve drainage patterns, inhibit erosion, improve air quality, lower maintenance and add beauty. Follow UFC 3-201-02 Landscape Architecture.

2. Landscaping is required for all newly developed sites and facilities; preserve existing native landscape where possible and avoid overplanting.

3. Concentrate landscaping in Facility Group 1 and along major thoroughfares and integrate these landscaped areas into the base’s stormwater management plan. Refer to the Streetscape Envelope Standards in this IFS.

4. All Facility Group 1 and 4 sites shall be landscaped at their entire perimeter; limit formal planting arrangements to formal spaces typically associated with Group 1. Landscape public spaces near the main entrances of Group 1 facilities. Use landscaping elements that complement building architectural features and proportions. Highlight building entry and screen unattractive building features such as utility risers or service areas.

5. For Facility Group 4:
• Use mixed species and informal landto integrate new with existing housing areas and to improve the overall community setting.
• Add plantings for shade and privacy and develop foundation plantings.
• Use randomly spaced plantings and tree massing.
• Landscape the perimeter edges of recreational and common areas.
• All self-help landscape materials are to follow the ACRB’s approved material list.

6. Facility Group 2 and 3 sites may have a native undisturbed landscape except at the main entrances of Group 2, which should be newly landscaped.

7. Facility plantings shall follow the Installation Facilities Standards (IFS) plant list, which is based on the specific microclimates created by the adjacent building: shadow areas, protected areas, zones adjacent to thermal mass, and availability of rainwater and/or grey water.

8. Provide open spaces as transitions between developed and native areas that promote quality of life and provide visual relief and allow walkable connections to the transportation system.

9. Return suitable areas to a natural state to minimize and, whenever possible, eliminate ground maintenance requirements; expand prairie areas where appropriate with native plants to eliminate mowing and maintenance requirements.

10. In tree clusters replace grass with naturalized shrub beds and leaf litter mulch to eliminate mowing requirements.

11. Use plantings in open spaces to reinforce the space as a visual asset. Design randomly spaced plant and tree massing to fill areas between facilities. Provide a soft transition from the horizontal ground plane to the plane of the building.

12. Consider landscape windbreaks when suitable for the local climate.

13. Integrate security requirements into the landscape design. Coordinate the heights of trees and shrubs and note restrictions for plantings following UFC 4-010-01.

14. Berms may be used as an integral part of the overall landscape strategy for screening, security and/or visual interest. Incorporate maintenance-free ground cover materials in areas of steep slope or areas that are difficult to maintain.

**C06.1.2. Xeriscape Design Principles**

- Applicable  N/A  Large graphics do not apply

- Applicable  N/A  Small graphics do not apply

1. Apply xeriscape principles following UFC 3-201-02, Appendix B, and Air Force Corporate Facilities Standards.

2. Facility plantings are encouraged to use native plant species and to consider specific microclimates created by the adjacent building: shadow areas, protected areas, zones adjacent to thermal mass, and availability of rainwater and/or grey water.

**C06.1.3. Minimizing Water Requirements**

- Applicable  N/A  Large graphics do not apply

- Applicable  N/A  Small graphics do not apply

1. Reasonably reduce demand on potable water while seeking opportunities to increase alternative water sources for irrigation. Reduce or eliminate the use of potable/domestic water for purposes of landscape architecture maintenance, consistent with existing legal or contractual obligations, and prohibit potable-water irrigation in new construction beyond establishment following current DoD and Air Force policy.
C06.1.4. Plant Material Selection

- Applicable: Yes
- N/A: No
- Select number of graphics / images (large: 800 px x 440 px) to insert: 1
- N/A Select number of graphics / images (small: 350 px x 240 px) to insert: No

1. Use only native, naturally occurring plant materials including grasses or turf suited for the local climatic conditions in the landscape design; potable-water irrigation systems are discouraged beyond the establishment period.

2. New facilities are encouraged to use native plant species as indicated on the plant list available from the BCE.

3. Trees should be the focus of landscape plantings and, where possible, should be a mix of deciduous and evergreen species for variety; provide tree grates when appropriate and use tree guards on smaller trees.

4. Ground covers are only recommended when minimal maintenance is required.

5. Turf areas should be limited to those that can be sustained by natural rainfall or grey water (non-potable) irrigation systems; turf may be defined by at-grade concrete mow strips to lessen maintenance.

6. Analyze soils and provide organic amendments as needed to improve plant growth and conserve water.

7. All plant material shall have one-year warranty and is subject to approval by the Base Landscape Architect.
C06.1.5. Water Budgeting (Hydrozones)

- Comply with DoD and Air Force policy on potable-water irrigation systems.
- Provide irrigation systems in new construction to establish plant materials following “Water for Landscaping” in UFC 1-200-02. Note the climate zone and annual rainfall for the locale.
- Ensure that landscape areas to be irrigated are adequately separated from structures to prevent moisture on masonry walls and efflorescence. Efflorescence in masonry work is unacceptable, and all masonry materials shall be classified as low-efflorescence.
- Use shredded softwood or rock mulch with landscaping fabric to increase moisture retention and control weed growth.
- New buildings shall cost-effectively integrate a grey-water reclamation system following UFC 1-200-02, which provides source water for an automatic drip irrigation system; connect adaptive plantings adjacent to facilities to a grey-water irrigation system when available and discontinue the use of potable water for irrigation after the establishment period.
- Provide irrigation design following UFC 3-201-02. Install drip irrigation products and components following UFGS Section 32 84 24 Irrigation Sprinkler Systems. Match the color of valve box lids to the adjacent ground treatment (i.e. green at turf & native seed areas, brown at wood mulch & rock areas).
- Life cycle cost-effectively equip irrigation systems to sense soil moisture, rainfall and wind to minimize unnecessary watering; incorporate drip irrigation systems as the primary source.

C06.1.6. Base Entrance Landscaping

- At the main gate, reinforce a sense of arrival through a well-designed concentration of landscape elements consistent in visual quality with Facility Group 1.
- Ensure landscaping has seasonal features with spring and fall color and a combination of evergreen and deciduous trees and shrubs for winter interest.
- Integrate base signs and street and pedestrian lighting whenever feasible.
C06.1.7. Streetscape Landscaping

1. Provide landscape designs with plant materials appropriately representing the level of quality of the adjacent Facility Group number. Refer to the Installation Elements section.

2. Plant street trees on the building side of sidewalks.

3. Primary roadways use same species, deciduous and coniferous street trees equally spaced to coordinate with light standards.

4. Secondary and access roadways use a more random spacing of mixed species clusters and / or groupings at focal points.

5. Select a variety of regionally appropriate streetscape plantings and grading to create a visual interest.

C06.1.8. Pedestrian Circulation Landscaping

1. Define walkways with landscaping where appropriate.

2. Provide rest areas along the pedestrian circulation network with human-scaled deciduous shade trees. Supplement tree plantings with finely textured shrubs when appropriate for the climate.
3. Provide wind breaks where required.

**C06.1.9. Parking Lot Landscaping**

- [ ] Applicable  [ ] N/A  Large graphics do not apply
- [ ] Applicable  [ ] N/A  Select number of graphics / images (small: 250 px x 188 px) to insert

---

1. Integrate appropriate landscaping elements such as shrubbery, and landscaped berms into parking areas to visually soften the appearance.

2. Avoid trees that drop sap, fruit, or seeds, and use long-lived species; keep trees trimmed, removing dead and dying trees or branches.

3. Fill in between trees with low shrubs, flowers, and ground covers. Allow areas for pedestrian cross circulation.

4. Provide planting in islands within parking lots for shade and appeal following IFS and the base stormwater management plan.

5. Use shrubs in groupings around the perimeter of parking areas to soften views from the street.

6. Avoid the use of hedges outlining parking areas.

7. Rain garden islands shall be landscaped to receive rainwater runoff from adjacent impervious parking areas to be absorbed into the ground/planting bed. Native plants and groundcovers are recommended within the rain garden areas, which can survive without supplemental irrigation once established.

**C06.1.10. Screen/Accent Landscaping**

- [ ] Applicable  [ ] N/A  Large graphics do not apply
- [ ] Applicable  [ ] N/A  Small graphics do not apply

---

1. Provide complimentary accent landscaping at monuments and static displays.

2. At Facility Group 1, provide landscaping adjacent to all freestanding signs without distracting from the written communication.

3. Provide landscape screening of utility elements adjacent to Facility Group 1.
4. Providing landscaping as visual screening is preferred to the construction of walls and fences; berming and mounding may supplement landscape screening. Use a three-tier landscaped screen that combines ground covers, shrubs, and small trees.

5. Reduce the negative visual impacts of parking areas and unsightly features with landscape screening. Provide concrete edging at planting beds as the standard. Raised planting beds constructed of brick may be used in pedestrian areas.

C06.1.11. Other

☐ Applicable ☮ N/A Large graphics do not apply

☐ Applicable ☮ N/A Small graphics do not apply

C07. SITE FURNISHINGS

Comply with AF Corporate Standards for Site Development:
http://afcfs.wbdg.org/site-development/index.html

Comply with AF Corporate Standards for Site Furnishings:
http://afcfs.wbdg.org/site-development/site-furnishings/index.html

C07.1. Furnishings and Elements

☐ Applicable ☮ N/A Large graphics do not apply

☐ Applicable ☮ N/A Small graphics do not apply

1. Provide a coordinated consistent inventory of site furnishings to positively contribute to the visual environment, image, and identity of the base; ensure durability, low maintenance, reduced visual clutter, and compatibility with the adjacent architecture.

2. Remove poorly located or redundant litter / ash receptacles, newspaper and bicycle racks, telephone booths, vending machines, walls and fences to reduce visual clutter and to lessen the requirements for maintenance.

3. Install needed outdoor seating (benches and low walls) in public gathering spaces near main and secondary building entrances. Low walls shall match facility architecture.

4. Benches in Groups 1, 2 and shall be factory finished metal. Provide recycled plastic top with metal frame benches in Group 4 and parks.

5. Bike Racks:

   - Integrate functional bicycle racks with the design of the building's main entrance grounds in Facility Groups 1 and 2 while meeting ATFP requirements.
   - Provide bicycle-parking areas for all facilities. Combine areas for densely sited buildings.
   - Place bike racks on concrete pads in accessible locations near established bike routes and near secondary building entrances.
   - Increase the numbers of available bike racks in residential and recreational areas.
   - Screen bicycle parking areas with landscaping or screen walls.
   - Align bollards at sites having multiple racks.

6. Limit the use of bollards, but when necessary for force protection use concrete filled standard 6” bollards in Groups 1, 2, and 4 including parks and trails; and concrete filled, 6” schedule 40 steel bollards in Group 3. Illuminated bollards may be used as approved on a case basis.
7. Locate architecturally coordinated containers for recycling, litter, ash, vending, etc., to minimize visual clutter and not visible from the building’s main entrance. Minimize the use of freestanding planters.

8. Generally limit picnic tables, barbeque grills and drinking fountains to lodging, dormitories, housing areas, parks and recreation areas following IFS. Placement and design of built-in grills must be approved by the ACRB.

9. The Installation Flagpole location shall comply with the guidance for the display of flags in AFI 34-1201. Each Air Force installation is authorized to fly one United States Flag, normally in front of the installation headquarters. Waivers for non-authorized locations must be submitted in accordance with AFI 33-360 and approved waivers (AF Form 679) must be maintained by the installation protocol office. Create a sense of place at flag pole locations with landscape or plaza design.

10. Refer to the Overview Section “Facility Hierarchy” topic of this AFCFS for guidelines regarding ancillary structures such as pavilions and shade shelters.

11. Bus shelters shall be provided only where there is a documented need and when approved on a case basis. Generally emulate the designs of adjacent shelters using dark bronze factory finished aluminum and glass.

12. Monuments and static displays shall be limited. New elements are generally discouraged unless these are fully vetted through the base’s approval process and designed following IFS.

13. When visual screening is necessary, consider landscaping as the first option; screen walls are permitted only in Group 1 finished with brick with color in accordance with the governing facility district, i.e. brown or red brick areas.

14. For fencing, apply the standards for “Products, Materials and Color” in the following section. Limit those with the highest visual quality to Facility Group 1 where there is sustained maintenance. Define all levels of security and visual quality.

15. Do not use chain-link fencing at Group 1, 2 or 4 facilities; Limit the use of barbed-wire outriggers on chain-link fencing at industrial sites, unless required for additional security or protection of assets.

16. Wood fencing may be used in Facility Group 4 and in recreation areas following IFS for material and finish when there is sustained periodic maintenance.

17. Provide trash dumpster enclosures for Group 1, and 2 with brick in accordance with the governing facility district. All gates shall be metal factory finished dark bronze.

18. Specify screen wall materials and finishes that do not require painting or maintenance beyond periodic cleaning.

19. Group 1, 2, and 4 picnic tables and seating shall be factory finished, recycled plastic with metal frames. Generally limit picnic tables, barbeque grills and drinking fountains to lodging, dormitories, housing areas, parks and recreation areas. Provide mid-morning to late-afternoon shade for all picnic tables.

20. Limit the use of freestanding planters to areas with ongoing maintenance.

21. Use natural cast iron tree grates at all formal plazas and courtyards set into concrete paving. Accent with brick pavers.

22. Provide kiosks only where there is a documented need for visual communication of posted messages. When used, match adjacent facilities in materials and detailing and consolidate kiosks with other site furnishings within 30 feet of major pedestrian paths. Limit kiosks to facility Groups 1 and 2 and parks.

23. Playground Equipment:
   - Provide consistent-style pre-manuplay equipment at parks, family housing areas, child developcenters, community centers, recreational areas, and TLF’s.
   - Place equipment with safe ground surfacing, benches, litter receptacles, and landscaping for shade.
   - Provide adequate pedestrian circupaths to play areas.

24. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.
C07.2. Site Furnishings Products, Materials and Color

Note: Apply the below base-wide standards for Site Furnishings (products, materials and color). Then refer to the Appendix and apply any additional requirements specifically related to the Facility District in which the project is located.

C08. EXTERIOR SIGNS
C08.1. Colors and Types

1. Provide concise functional signs as a visually unifying element with consistent colors and types for all Installation and Gate Identification Signs; Building Identification Signs; Traffic Control Devices; Directional and Wayfinding Signs; and Informational and Motivational Signs.

2. Provide signs with the lowest overall life cycle costs considering initial cost, ongoing maintenance and lifespan while meeting quality standards. Follow IFS for specifications appropriate for the local climate to withstand weathering. Use dark brown for backgrounds with reflective white lettering on metal placards unless otherwise noted.

3. Reduce the number of signs, reduce visual clutter and provide only essential signs required for identification, directions, instructions, and customer service following UFC 3-120-01. Remove non-conforming signs during renovation projects.

4. Use clear concise terms for content consistent with UFC 3-120-01.

5. Display of emblems on building exterior walls or other permanent structures is prohibited by UFC. Avoid mottoes, super graphics, or individual titles on buildings or identisigns. Building-mounted signs or individual letters with corporate logos are alfor commercial facility signs only with ACRB approval.

6. Raised “standout” letters and numbers may be used for Group 1 with approval on a case basis.

7. Group 2 and 3 facilities shall have wall mounted facility signs with sizes and layouts following UFC 3-120-01. Signs are not permitted for Group 4 facilities. Display facility numbers in one location - at the back or side corner of buildings, coordinated with architectural features.

8. Only one identification sign is permitted at each building entrance. Include a building address consistent with US Postal Service protocols following UFC 3-120-01. Facility identification signs with street addresses are generally free standing and not applied to facility facades.

9. Traffic Control Devices, which regulate vehicular traffic on the installation, shall conform to the standards in the Manual of Uniform Traffic Control Devices (MUTCD) published by the Federal Highway Administration. Coordinate street signs with this IFS.

10. Provide Directional and Wayfinding Signs and address both pedestrian and vehicular traffic following UFC 3-120-01 for size, layout and content. Display the Air Mobility Command logo decal on the left of all street name signs.

11. Reserved parking signs should be kept to a minimum. When approved, provide post-mounted sign faces in base standard materials and colors. Consider “bracketing” a designated area with a single sign at each end.

12. Parking lot identification signs may be used to identify areas or rows within large lots.

13. Follow the guidelines and requirements in ABAAS and the MUTCD for accessible parking signs.

14. Follow UFC 3-120-01 for Informational and Motivational Signs for size, layout and content.

15. Symbols or pictographs (graphic expressions of actual objects) may be used to indicate service, mandatory / prohibitory, sports, and recreation when rapid communication is necessary.

16. Force Protection signage may be applied to glass doors using white vinyl lettering.
17. Refer to UFC 3-120-01 for prohibited signs, which include those with animated, blinking, chasing, flashing, or moving effects.

18. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.

C08.1.1. Materials and Color Specifications

☐ Applicable  ☑ N/A  Large graphics do not apply

☐ Applicable  ☑ N/A  Small graphics do not apply

1. Fabricate sign panels from corrosion resistant aluminum placards. Sign posts shall be square metal with capped ends in a concrete base.

2. Fence mounted sign panels may be attached with exposed fasteners.

3. All signage shall follow Federal Highway Administration (FHWA) Manual on Uniform Traffic Control Devices (MUTCD) using standard colors. Refer to MUTCD color specifications, which provide cross-referenced Pantone Matching System (PMS) numbers.
   a. Standard Blue
   b. Standard Dark Bronze (also Federal Standard Color 30040)
   c. Standard Red
   d. Standard Black (non-reflective)
   e. Standard White
   f. Standard Brown

Type: **Freestanding Tertiary Sign (Sizes and Uses per UFC)**

Applies to: □ Group 1  □ Group 2  ● Group 3  □ Group 4  ● Other

Mfr: Custom

Color: Medium brown face, dark bronze posts, white vinyl lettering

Finish: Powder coat or vinyl sign face

Model #: Aluminum sheet face, extruded aluminum posts

Other: Provide layout and sizes per UFC.

UFGS: 05 50 13 Miscellaneous Metal Fabrications

---

Type: **Wall Mounted**

Applies to: ● Group 1  ● Group 2  ● Group 3  □ Group 4  □ Other

Mfr: Custom

Color: Medium brown, white lettering

Finish: Satin vinyl applied to aluminum sheet

Model #: Aluminum sheet with vinyl face and vinyl lettering

Other: Provide layout and sizes following UFC.

UFGS: N/A
Type: Glass Mounted

Applies to: Group 1  Group 2  Group 3  Group 4  Other

Mfr: Custom

Color: White vinyl lettering

Finish: Matte vinyl

Model #: Machine-cut sheet vinyl

Other: Apply vinyl lettering to glass. Provide sizes following UFC.

UFGS: N/A

C08.1.4. Traffic Control Devices (Street Signs)

Type: Street Signs

Applies to: Group 1  Group 2  Group 3  Group 4  Other

Mfr: Custom

Color: White reflective lettering on a Standard Brown background

Finish: Powder coat or vinyl sign face

Model #: Aluminum sign face, control arm or pole mounted

Other: Mount 7' above grade minimum, pictographs and logos are prohibited on street name signs per UFC.

UFGS: 05 50 13 Miscellaneous Metal Fabrications
C08.1.5. Directional and Wayfinding Signs

Type: **Vehicular**

Applicable

| Mfr: Custom |
| Color: Medium brown face, dark bronze posts, white reflective lettering |
| Finish: Powder coat or vinyl sign face |
| Model #: Aluminum sheet face, extruded aluminum posts |
| Other: Conform to the requirements of the MUTCD and its DoD Supplement. Provide types and sizes where required by UFC. |
| UFGS: 05 50 13 Miscellaneous Metal Fabrications |

C08.1.6. Informational Signs

Applicable

Large graphics do not apply

1. Minimize informational signs such as static display signs, hours of operation, and project signs to reduce visual clutter.

2. Static display signs shall have standard dark brown (color).

3. Hours of operation signs shall have a level of quality equivalent to the Facility Group number.
4. Temporary / Project Signage shall be judiciously placed to avoid visual clutter. Schedule and arrange for the removal of these signs prior to installation.

C08.1.7. Motivational Signage

☐ Applicable  ☐ N/A  Large graphics do not apply

☐ Applicable  ☐ N/A  Small graphics do not apply

1. Provide professionally produced motivational signs as important elements of campaigns to boost morale, improve safety, aid in recruiting, and accomplish other motivational objectives. Consolidate this signage to reduce visual clutter.

2. Motivational signs shall be limited to an electronic "marquee" type changeable sign near each gate. Temporary signs are not permitted. Motivational information may also be posted in a small, printed format on kiosks in specified, high pedestrian use areas. Refer to kiosks under Site Furnishings.

3. Follow UFC 3-120-01 for color and layout. Note that animated, blinking, chasing, flashing, or moving effects are prohibited by the UFC.

4. Mount marquee signs on reinforced concrete bases with a natural warm gray color.

C08.1.8. Parking Lot Signs

☐ Applicable  ☐ N/A

C08.1.9. Regulatory Signs

☐ Applicable  ☐ N/A

1. Regulatory signage, which restricts, warns and advises, shall be limited to those mandated under Highway/Traffic, Government Warning, and/or Parking Regulation. Follow UFC 3-120-01 and its industry references for color and layout.

2. Provide a comprehensive, systematic approach to regulatory signage to avoid clutter and confusion from "over signage."

3. Maintain base warning signs for safety and security at the base perimeter and at specific secure areas. Use these to notify visitors of restrictions governing conduct on the base, as well as other security procedures.

4. Traffic control signs must follow the Manual on Uniform Traffic Control Devices administered by the Federal Highway Administration for color and display requirements.

5. Handicapped parking signs must follow AMC Exterior Sign Standards for color and display requirements.

6. Base warning signs must adhere to the Air Force Sign Standard for color and display requirements.

C08.1.10. Other

☐ Applicable  ☐ N/A

C09. LIGHTING
Comply with AF Corporate Standards for Site Development:
http://afcs.wbdg.org/site-development/index.html
Comply with AF Corporate Standards for Lighting:
http://afcs.wbdg.org/site-development/lighting/index.html

C09.1. Fixtures and Lamping

☐ Applicable  ☐ N/A  Large graphics do not apply

☐ Applicable  ☐ N/A  Small graphics do not apply

Exterior lighting is a system that directly impacts the visual qualities of the base. By day, the fixtures and poles add visual character and rhythm to the streetscape. By night these amenities contribute to the perception of safety and comfort. Use common components throughout the base.

1. Provide, coordinate and efficiently install street, parking lot, sidewalk and facility lighting with appropriate luminaires, lamping, placement, and spacing following UFC 3-530-01 and Installation Facilities Standards (IFS); ensure the level of quality is consistent with the adjacent facility group number. Pole-mounted, wall-mounted and bollard fixtures are permitted. Use underground utility service for connection to lighting fixtures.

2. Integrate controls to automatically reduce lighting power during periods of non-activity; automatically turn off power when sufficient daylight is available. Photo metrics are required for all applications.

3. Ensure continuity and consistency of lighting elements. In new construction generally match post types, fixture types, styles, heights, sizes, materials, colors, and lamp types of adjacent facilities and the facility district.

4. Economically provide renewable-energy power sources such as solar photovoltaic when feasible.

5. Use appropriately designed or shielded luminaires to direct light downward to minimize light pollution and intrusion onto adjacent sites and to facilitate night training.

6. Calculate illuminant levels for all lighting applications following UFC 3-530-01 and ensure compliance with pre-curfew maximum brightness level requirements.

7. Sufficiently address environmental factors to prevent corrosion and weathering of fixtures, plinths and other components.

8. Architectural and Accent Lighting:
   a. Wall mounted fixtures should respond to the architectural character of the facility.
   b. Efficient accent lighting of architectural and landscape features may be provided for Group 1, lodging and historical applications. Accent lights in ground-mounted locations may be provided for static displays and signs when these do not conflict or cause hazards with overhead aircraft.
   c. Incorporate recessed, wall-mounted luminaries to wash light across plaza, paving, and stairs.
   d. Minimize and integrate into the building design the use of building-mount fixtures for general illumination of service yards and outdoor spaces.
   e. Uplight architectural, landscaping, and building entrance features to emphasize importance and hierarchy.
   f. Provide pedestrian-scale lighting fixtures throughout Group 4 housing areas; utility elements such as transformers shall be factory-finished dark brown to blend with surroundings.

9. Comply with UFC 3-530-01 for light source technology and lamp types. High efficiency lamping such as LED is preferred for most applications.

10. Provide round tapered, square non-tapered, or round non-tapered aluminum poles and aluminum fixtures with square, rectangular or circular housings in colors and shapes to match adjacent facilities and the facility district.

11. All classifications of roadways will use the same luminaries, poles, and mounting height. Use clear aluminum poles with columnaries and poles for all roadways. Equally space poles on alternating sides of all roadways.

12. Bollards:
a. Install lighted bollards only at Group 1 and high-traffic Group 2 facilities. Generally match materials, colors and shapes of adjacent facilities and the facility district.
b. Use bollards to protect buildings, equipment, and people from vehicle impact and to restrict access.
c. Use a 6-inch diameter, factory finished dark bronze aluminum, domed top bollard as the standard.
d. Use same style bollard with single function luminaire at pedestrian areas, pathways, and entrances.
e. For force protection use a 6-inch diameter, concrete filled, steel pipe. Cap lighted force protection bollards with a pre-manufactured, domed-top, single luminaire.
f. For bollards protecting equipment or buildings from vehicle damage, paint to match adjacent surfaces.
g. Use reflective beads in paint on bollards used in auto traffic areas.

13. Install natural gray color, smooth finished concrete bases for all poles in heights appropriate for the facility group and application. Generally Groups 1, 2 and 4 shall have at-grade bases. Group 3 shall have taller bases for added durability.

14. When parking lot lighting is necessary, provide an illuminated path to the building’s main entrance. Pole bases should be contained within an internal landscape median or island.

15. Parking Areas:
   a. Use arm-mounted, square, shoebox-type luminaries in factory finished dark brown. Use aluminum, round tapered, dark bronze poles.
   b. Use multiple luminaries on a single pole to reduce clutter.
   c. Coordinate pole placement with parking island locations.

16. Walkways and Paths:
   a. Consistently install lighting for sidewalks, bikeways and trails to match adjacent facilities.
   b. Provide pedestrian-scaled lighting fixtures throughout housing area and along recreation trails and sidewalks not adjacent to roadways.
   c. Equally space light fixtures for sidewalks on same side of walk.
   d. Use arm-mounted shoebox fixtures.

17. Landscape accent lighting may be used in public gathering spaces and in Group 1 facilities. Coordinate the design, luminaire selection, and placement with the location of trees, shrubs, and site furnishings.

18. Mounting Heights:
   a. Control light trespass into residential areas
   b. Keep mounting heights low and consistent. Any lights mounted over 30 feet high require special review by the ACRB.

19. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.

**C09.2. Light Fixture Types**

**Note:** Apply the below base-wide standards for Light Fixtures (products, materials and color). Then refer to the Appendix and apply any additional requirements specifically related to the Facility District in which the project is located.
### C09.2.1. Street Lighting

- **Type:** Style 1
- **Applies to:**
  - ☑ Group 1
  - ☑ Group 2
  - ☑ Group 3
  - ☑ Group 4
  - ☐ Other
- **Mfr.:** Holophane
- **Color:** Clear Anodized
- **Finish:** Factory
- **Model #:** LEDG, Cobra Head, round pole
- **Other:** Lamp: LED. Follow manufacturer’s recommendations for fixture base.

**UFGS:** 26 56 19 Roadway Lighting

### C09.2.2. Parking Lot Lighting

- **Type:** Parking Lot Style 1
- **Applies to:**
  - ☑ Group 1
  - ☑ Group 2
  - ☑ Group 3
  - ☑ Group 4
  - ☐ Other
- **Mfr.:** Holophane
- **Color:** Dark Bronze Anodized (or Clear Anodized as approved by BCE)
- **Finish:** Factory
- **Model #:** LEDG, Cobra Head, round pole Single Arm or Dual Arm Mount
- **Other:** Lamp: LED. Follow manufacturer’s recommendations for fixture base.

**UFGS:** 26 56 00 Exterior Lighting
Type: Parking Lot Fixture Base

Applies to: □ Group 1 □ Group 2 □ Group 3 □ Group 4 □ Other

Mfr: Custom

Color: Natural gray

Finish: Trowel

Model #: Form-cast, round

Other: N/A

UFGS: 03 33 00 Cast-In-Place Architectural Concrete

Comply with AF Corporate Standards for Architectural Features:
http://afcfs.wbdg.org/facilities-exteriors/architectural-features/index.html

Insert 3 photos for each facility group.

[Image Tool 250 x 188]
D03.1. Orientation, Massing and Scale

1. Achieving compatibility among buildings is essential in creating an Architecture of Community. Develop facilities with a common design theme and character to enhance architectural compatibility. Unity is the goal, not conformity.

2. Orient new buildings to maximize energy efficiency, passive solar and daylighting potential of the building; narrow buildings oriented along an east-west axis are preferred to minimize heat gain in the summer months and maximize heat gain in the winter months resulting in less overall energy usage.

3. Provide orthogonal geometry for principal building form; angular geometry may be used sparingly for Group 1 and used only for emphasis at specific areas such as building entrances and stairwells.

4. Maintain a human scale and reduce the visual scale of large buildings with sub-massing related to interior functional operations; create consistent form and scale in adjacent buildings with compatible profiles or silhouettes. Break up the mass of large structures to allow for slope roofs to the maximum extent.

5. Building heights shall not be limited; however, building heights over 2 stories shall be considered on a case basis.

6. Combine functions where practical to avoid a proliferation of small, independent structures.

7. Use and coordinate shading devices with orientation and for function.

D03.2. Architectural Character

2. Emphasize horizontal proportions on building elements. Rectangular elements are the standard for major building masses. Use clean, simple, contemporary forms and avoid curves or angular elements in plan.

3. Respond to the local climate and regional influences with environmentally functional architectural features.

4. For new facilities design generally maintain consistency and visual unity in the character of the adjacent buildings through compatible architectural features: repeated use of similar forms such as roofs, and through recurring elements such as doors, windows, materials and colors.

5. Reinforce the community theme. (example: “campus environment and educational theme with a related architectural theme expressive of innovation and technology that represents the current Air Force Training and Education Command mission.”)

6. All facilities shall express sustainability through their orientation, massing, shape, form, materials, and detailing. Provide louvers, fins and other shading devices to control heat gain and glare and to and improve energy efficiency.

7. Strive for economical construction without compromising a high-quality, professional appearance.

D03.3. Details and Color

1. Provide a palette of earth-tone colors related to the native landscape in brick, block, stucco and powder-coated metals. Refer to wall systems for detailed material listings.

2. Relate the level of architectural detailing to the Facility Group number.

3. Use only integrally colored materials as the predominant exterior building material; do not use materials that require field painting and ongoing maintenance.
4. Provide consistent and compatible colors for every exterior building feature, including walls, roofs, doors, windows, gutters, downspouts, utility and mechanical elements, and other visible elements.

5. Match the existing materials for addition / alteration projects unless a significant change to the exterior envelope is included. Whenever possible bring existing facilities into compliance.

6. Noncorrosive metals with factory applied color finishes are required.

7. Combine details and color with orientation, massing, scale and architectural character to maintain base compatibility.

8. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.

D03.3.1. Climate-based Data and Life-Cycle Cost-Effective Passive and Natural Design Strategies:

- Climate dominated by mechanical cooling
- Climate dominated by mechanical heating
- Climate with similar mechanical cooling / heating needs
- Climate with minimal mechanical cooling / heating needs
- Climate with high humidity
- Climate with moderate humidity
- Climate with low humidity
- High Solar Insolation
- Moderate Solar Insolation
- Low Solar Insolation
- Soils with High Thermal Conductivity
- Soils with Average Thermal Conductivity
- Soils with Low Thermal Conductivity

Other:

Other:

Facility: Narrow buildings along E-W axis are preferred

Wall: Integral shading features and devices / interior masonry thermal mass walls (for heating)

Doors: Recessed are preferred

Windows: Limit north-facing windows / maximize windows on south façades with shading
Roof: High to medium albedo, minimal to moderate slope

Structure: Do not expose ferrous metals. Provide factory finished non-ferrous metals or concrete

MEP: Ground-source and solar photovoltaic following LCCA

Other: Optimize shading devices to provide summer shade and allow winter solar heat gain

Other: Internal thermal mass walls may be used for heating following LCCA

Note: Apply the below base-wide standards for Architectural Features (products, materials and color). Then refer to the Appendix and apply any additional requirements specifically related to the Facility District in which the project is located.

D03.3.2. Natural Ventilation System

Applicable ☑ N/A Number of base standards 1

Type: Style 1 Aluminum Windows

Applies to: ☑ Group 1 ☑ Group 2 ☑ Group 3 ☐ Group 4 ☐ Other

Mfr: Kawneer (or equivalent)

Color: Dark Bronze (or clear anodized as approved by BCE)

Finish: Anodized

Model #: Varies

Other: Provide thermally broken frames.

UFGS: 08 41 13 Aluminum-Framed Entrances and Storefronts
### D03.3.3. Thermal Mass

**Type:** Interior Wall Material Thermal Massings  

**Applies to:** Group 1, Group 2, Group 3, Group 4, Other  

**Mfr:** Interpace Brick  

**Color:** Imperial Red Mission, & Brown (Brown Brick Area only)  

**Finish:** Light texture  

**Model #:** Coursed unit masonry  

**Other:** 

- Brick is preferred. Concrete block may only be used in Group 3 when approved by the BCE. Mortar must be natural Portland Cement  

**UFGS:** 04 20 00 Unit Masonry

---

### D03.3.4. Thermal Shading

**Type:** Horizontal Shading Louvers  

**Applies to:** Group 1, Group 2, Group 3, Group 4, Other  

**Mfr:** Kawneer (or equivalent) or custom  

**Color:** Dark bronze  

**Finish:** Factory, to match frames  

**Model #:** Louver  

**Other:** Shading devices may be attached to frames or structure  

**UFGS:** 08 41 13 Aluminum-Framed Entrances and Storefronts
## D03.3.5. Renewable Heating/Cooling

**Type:** Geothermal (ground source) Vertical ground loop well field  
**Applies to:**  
- [ ] Group 1  
- [X] Group 2  
- [X] Group 3

D04. BUILDING ENTRANCES

Comply with AF Corporate Standards for Facilities Exteriors:
http://afcfs.wbdg.org/facilities-exteriors/index.html

Comply with AF Corporate Standards for Building Entrances:

Insert 3 photos for each facility group.
D04.1. Primary Entrances

1. Entrances act as a transitional element from exterior to interior and provide opportunities to create a focal point on a façade. They establish a user's first impression and delineate the importance of the building by the size and architectural detailing of the entrance structure.

2. Emphasize the primary entrance in the overall building design with a projecting or recessed covering for weather protection following Installation Facilities Standards (IFS) for Facility Group designations.

3. Provide vestibules at entries in Groups 1, 2 and 3 unless used infrequently or serving unconditioned space following ASHRAE 90.1.

4. Projected entrance features with gabled or hipped roof forms are preferred.

5. Fully integrate all elements including the design of handicap ramps in the overall design of the primary entrance in an organized uncluttered appearance.

6. Install paved transitional spaces sized for the building function and occupancy. Use accent pavers or colored conin approach walkways or at entry plazas.

7. Install appropriate lighting and site furniture following ATFP and IFS.

8. Protect entrances from falling ice and snow.

9. Provide porte cochere or covered drop-offs when justified for lodging and medical facilities; do not use for prestige or architectural accents.

10. Locate newspaper, vending machines, and similar elements out of view to avoid visual clutter.

D04.2. Secondary Entrances

1. Provide vestibules at entries in Groups 1, 2 and 3 unless used infrequently or serving unconditioned space following ASHRAE 90.1; use of stair towers as vestibules for multi-story buildings is encouraged when building and / or energy codes are satisfied.

2. Reflect the character of the primary entrance to a lesser extent with a smaller scale.

3. Include a recess or projection for weather protection and shading.

4. Integrate service and egress doors and loading areas with the building design by matching the materials and detailing and reflect the overall quality of the facility.

5. Incorporate egress structures such as stair towers into the facility design. Do not use canopies at emergency egress doorways.

6. Canopies may be used for service and loading areas; weather protection beyond weatherstripping is not required at doors used only for life safety egress.

7. Develop building massing and orientation to minimize the appearance of service and loading areas; physically and visually separate these from primary entrances.

8. Loading areas must be organized, orderly and have an uncluttered appearance.
   a. Minimize visual impact with proper siting and access.
   b. Provide unobtrusive service entrances that are physically and visually separated from primary and secondary entrances.
   c. Use landscaping and screen walls to screen and separate loading docks.
D05. WALL SYSTEMS

Comply with AF Corporate Standards for Facilities Exteriors:
http://afcfs.wbdg.org/facilities-exteriors/index.html

Comply with AF Corporate Standards for Doors and Windows:

Comply with AFCFS Recommended Materials:

Insert 3 photos for each facility group.

Group 1

Group 2

Group 3

Group 4
D05.1. Hierarchy of Materials

1. Group 1 facilities may have more refined detailing than Group 2 and Group 2 may have more definition than Group 3.

2. Group 1 and 2 facilities shall be primarily of red brick in a running bond pattern with tooled joints. Brick may be used when appropriate for lintels or sills. Detailing should emulate bearing wall construction. Conceal expansion joints with downspouts or locate them at transitions in the wall such as at pilasters or reveals. Use natural color portland cement mortar.

3. Efflorescence in masonry work is unacceptable. All materials shall be classified as low-efflorescence.

4. Precast is permitted in the brown brick areas for community and administrative facilities (i.e. Groups 1 and 2). Precast is appropriate for lintels, sills, belt courses, and friezes. Other facade elements made of precast should be used sparingly to ensure that brick remains the prominent material. Natural is the standard color for precast concrete.

5. Detailed designs and patterns may be cast into the pieces to create an individual character for a single facility or complex.

6. Site-cast components are acceptable per ACRB approval.

7. For Group 3 facilities and inconspicuous areas of Group 2 facilities use brick or a combination of brick and CMU or metal panels on smaller administrative facilities.

8. For Group 3 facilities:
   - Do not use metal panels as the sole material for any structure.
   - Integral color CMU may be used as a sole material for facilities with ACRB approval.
   - Cap brick parapet walls with metal or precast concrete coping.
   - On larger facilities use a combination of brick and flat metal panels.
   - Use a horizontal expression of metal panels.
   - Locate visible vents and louvers as planned design elements; avoid random placement.
   - Vents and louvers are to match the color of adjacent surfaces. Refer to the Appendix for special requirements of Facility Districts.

9. Group 4 shall be a combination of two of the following materials: vinyl siding, and brick to match existing, subject to ACRB approval. Alternate exterior color schemes randomly using the paint and siding colors specified in the Appendix.

10. Multi-story Group 1 facilities may include a transition in material, color or detailing to create a visual base. Generally limit these variations to two materials max, brick or concrete.

11. Use high-performance building envelopes following UFC 1-200-02.

12. Use detailing not subject to excessive weathering. Provide wall accents consistently throughout the base and for each facility Group type. Facilities shall demonstrate a greater application of detailing. Architectural accents such as lintels, sills, belt courses, pilasters, and columns or other contextual details are encouraged to break up flat facades and add visual interest.

13. Use integrally colored materials and factory-finished metals. Do not paint concrete block.

14. Translucent wall panels may be used in Facility Group 1 and recreational uses in Group 2 when protected from direct solar gain. Provide insulating panels and shading appropriate for the orientation and exposure.

15. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.

D05.2. Layout, Organization and Durability

1. Organize wall components including doors, windows, accents, shading devices, control joints, etc., to provide an ordered, professional appearance. Organize and coordinate placement of all mechanical, electrical, lighting, communication and other building components.
2. Integrate shading devices into the overall composition of the wall.

3. Integrate fixed shading devices as at all exterior glazing exposed to summer UV heat gain as a passive design measure to reduce energy use. Ensure adequate shading at west entrances. Deciduous trees may be used for shading.

4. Shading systems may be included as part of a manufacturer’s window system or may be custom systems integrated into the wall.

5. Integrate vertical components such as downspouts and control joints into the overall organization.

6. Provide appropriate transitions between dissimilar materials to mitigate effects of thermal expansion and galvanic action.

7. All joint sealants shall be slightly darker than adjacent surfaces.

8. Materials requiring regular maintenance are not permitted; do not use exposed structural steel or other materials that require painting.

9. Refer to C07.2.16. Screen Walls for materials and colors of freestanding walls.

10. Refer to D07. Roofs for downspouts.

**D05.3. Equipment, Vents and Devices**

1. Arrange all mechanical, electrical, fire alarm, lightning protection and other system components to create an orderly appearance that integrates with the wall system.

2. Do not expose conduits, cables, piping, lightning protection components, etc. on exterior walls; if unavoidable in renovations, finish these elements to match the adjacent wall surface.

3. Avoid visual clutter and where surface-mounted elements are required they shall match the wall color.

4. All gas meters, fire bells, vents, louvers, and electrical / communication boxes shall match the wall surface color on which the equipment is mounted.

**D05.4 Wall Systems Materials**

**Facility Group 1** wall materials shall be as follows.

- **Primary:** Brick
- **Secondary:** Cast-in-place Concrete or (with brick) Architectura
- **Accent:** (with brick) Metal Panels

**Facility Group 2** wall materials shall be as follows.

- **Primary:** Brick
- **Secondary:** Architectural precast
- **Accent:** Cast-in-place concrete

**Facility Group 3** wall materials shall be as follows.

- **Primary:** Ribbed metal sheeting
- **Secondary:** Ribbed Metal Sheeting in Alternate Color or Brick
- **Accent:** Brick

**Facility Group 4** wall materials shall be as follows.

- **Primary:** Vinyl Siding &/or T1-11 Type Siding
- **Secondary:** Fiber Cement Siding, and/or Trim Boards
- **Accent:** Brick
Note: Apply the below base-wide standards for Wall Systems (products, materials and color). Then refer to the Appendix and apply any additional requirements specifically related to the Facility District in which the project is located.

D06. DOORS AND WINDOWS

Comply with AF Corporate Standards for Facilities Exteriors:
http://afcfs.wbdg.org/facilities-exteriors/index.html

Comply with AF Corporate Standards for Doors and Windows:

Comply with AFCFS Recommended Materials:

Insert 3 photos for each facility group.

Image Tool 250 x 188
D06.1. Types

1. Dark bronze anodized aluminum doors, windows and frames with thermal breaks are preferred for Facility Groups 1-3; match the color of the door and frame. For renovation projects the color of new windows, doors and frames may match the existing ones.

2. Aluminum clad wood windows are preferred for Facility Group 4.

3. Standard-sized hinged doors are preferred. Use sliding, folding, overhead, sectional and other door configurations only to support mission operations.

4. Automatic doors are allowed only where functionally necessary.

5. Limit hollow metal doors and frames to security doors, utility rooms and mechanical rooms in Groups 1 and 2 and to any application in Group 3 facilities.

6. Utility and emergency egress doors shall match the wall color.

7. Passive thermal comfort methods of ventilation are encouraged where life cycle cost justified.

8. Windows must meet force protection requirements.

9. Adjacent joint sealants should be slightly darker than the frame color.

10. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.

D06.2. Layout and Geometry

1. Visually and functionally compose openings in walls for the climate-specific exposure.

2. Consistently use opening type, size, placement, mullion pattern, and color to reinforce the overall architectural design.

3. Set windows back at least 3” from the building facade.

4. Incorporate operable windows with screens where possible.

1. Transom windows / elements above doors / windows are encouraged.

2. Openings shall augment interior lighting and space conditioning needs.

3. Protect against vandalism, intrusion and coordinate sound ratings.

D06.3. Glazing and Shading

1. Tinted, energy-efficient, low-e, double-pane glazing is encouraged; provide triple-pane glazing in extreme environments.

2. Glazing color shall follow Installation Facilities Standards (IFS).

3. Translucent wall panels may be integrated into wall systems. Use clear glazing on the outside and white glazing on inside with dark bronze frames.

4. Do not use mirrored glazing.

5. Fully integrate applicable shading designs for overhangs, louvers, light shelves and grilles.

6. Where appropriate, install window screens to take advantage of natural ventilation.

7. Integrate clerestories or low-profile skylights with building design. Clerestory windows shall be either glass or translucent insulated panels.
8. Electronic security systems or security glazing is preferred to physical screens or bars. Where physical barriers are required, develop simple rectangular designs that are unobtrusive.

**D06.4. Hardware**

1. Provide hardware appropriate for the Facility Group while considering activity and frequency of use and local climate; hardware may be of higher visual quality for Facility Group 1.

2. Ensure hardware will perform throughout the facility's lifespan without showing extreme wear.

3. Select finishes that will not degrade by intensity of operation or exposure to the elements.

4. Use consistent finishes and color on window and door systems throughout a facility. For renovation projects the color of new hardware may match the existing hardware.

5. Design building systems to eliminate the need for security screens whenever possible.

**D06.5. Doors and Windows Materials**

*Note:* Apply the below base-wide standards for Doors and Windows (products, materials and color). Then refer to the Appendix and apply any additional requirements specifically related to the Facility District in which the project is located.

**D06.5.1. Anodized Aluminum**

Recommended Image:
Roof Detail
Size image to:
226 pixels width x 188 pixels height
Click here to insert image
D07.1. Roof Type and Form

1. Use proven, cost-effective roof systems with high durability, weather resistance, and low maintenance that are compatible with Installation Facilities Standards (IFS) and requirements for the designated Facility Group.

2. Generally match the roof type and form of existing adjacent facilities in new construction. Use a combination of gabled and hipped roofs as the primary building form for all facility types. Open gabled elements may be used to accent entries. Gabled end walls may also be used.

3. Flat roofs with continuous parapet walls are discouraged and should be limited to special use facilities when approved by the ACRB.

4. Group 1, 2, and 3 buildings with sloped roofs shall use standing seam metal roofing. 16” wide panels with a 1-1/2” high seam is the standard.

5. Provide screens for roof-mounted appendages and equipment of the same materials, which are used predominantly in the building’s roof systems.

6. Roof translucent panels are permitted only for Group 1.

7. Low-sloped roofs are only allowed for larger structures in combination with hipped roofs, or to match existing conditions on renovation / alteration projects.

8. Group 4 facilities shall have gabled or hipped composite shingle roofs.

9. Roof eaves shall extend beyond the exterior wall for roof drainage and shading. Provide overhangs for shading in response to local climatic conditions, sized and proportioned to the height of the facility and to the window openings being shaded.

10. South-facing eaves shall coordinate with adjacent wall-mounted shading devices.

11. The color, shape and slope of the eave and soffit shall be compatible with adjacent facilities.

12. Keep roofs uncluttered and minimize penetrations.

13. Diminish massive roofs into coordinated smaller components consistent with adjacent facilities; avoid random, arbitrary changes.

14. Increase the insulation value of existing roofing systems during renovations if supported by life cycle cost and structural analysis.

15. Roofs shall be maintained for the life of the system and replaced in accordance with UFC 3-110-04 and AFI 32-1051. A warranty is required on all new roofs.

16. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.

D07.2. Roof Slope

1. Group 1 and 2 buildings shall use sloped roofs, min. 3:12.

2. Low-sloped roofs are allowed for larger structures or to match existing conditions on renovation projects. Minimal-sloped roofs may also be used for Group 3 facilities in high-visibility areas. Membrane roofing for low-sloped roofs may be used only with ACRB approval. A warranted minimum slope of 1/2 : 12 is required. Mill finish may be used on low sloped roofs that are not visible.

3. Group 4 facilities shall use 4:12 to 6:12 roof slopes.

4. Ensure adequate drainage, and connect to the subsurface rain collection system where available.
5. Provide roof slopes to accommodate solar photovoltaic, solar thermal, passive systems and daylighting when applicable following UFC 1-200-02.

6. Provide underlaminents as required for the roofing type as directed by the UFC.

D07.3. Parapets and Copings

1. As approved on a case basis, extend wall materials vertically above the roof line and provide metal copings to match the wall. Ensure copings are properly flashed and detailed to avoid roof leaks.

2. Properly proportioned turn-down standing seam metal fascia are permitted with ACRB approval.

D07.4. Color and Reflectivity

1. Standing seam metal roofs in Groups 1 and 2 and smaller facilities in Group 3 shall be weathered copper in color to match adjacent facilities and follow requirements of IFS.

2. All minimal-slope membrane roofs shall use only use high-albedo, high reflectivity color to help decrease the temperature around the buildings and minimize damage to human and wildlife habitat.

3. Sloped roofs in Group 4 shall cover a variety of earth tone browns and grays in color for single family dwellings. Base dormitories shall utilize the weathered copper standing seam metal roofing.

4. Fascia, and soffit finish shall match the roof color when occurring with metal roofing.

5. Stepped flashing at the intersection of roofs and walls shall match roof color.

6. Comply with UFC 3-110-03 and ASHRAE 90.1 for Solar Reflectance Index (SRI) and thermal requirements.

7. All roof flashing shall match the color of the predominant background material.

D07.5. Gutters, Downspouts, Scuppers, Drains

1. All sloped roofs shall use gutters and downspouts. Gutters shall be outside the fascia.

2. Internal roof drainage systems are not permitted in new construction. Minimal-sloped roofs shall be sloped to drain to the building perimeter through scuppers into downspouts.

3. All gutters and fascia shall match the roof color.

4. On painted buildings, paint downto match the wall color.

5. Size the roof drainage system per IBC and SMACNA for the region.

6. Use scuppers as required in parapet walls. Arrange scuppers in an orderly manner consistent with other elements of the wall system.

7. When open scuppers are connected to downspouts, provide transitions consistent with adjacent facilities.

8. Integrate open-face downspouts with the architectural details of the wall system and arrange in an orderly, non-prominent appearance. Generally blend downspouts with the color of the wall (not contrasting it).

9. Fabricate downspouts from non-corrosive materials such as aluminum or zinc-coated steel. Provide powder-coated finishes in medium bronze.

10. Provide angled transitional pieces for downspouts to fit closely against the wall for their entire length.

11. Coordinate locations of downspouts to conceal control joints in masonry walls when possible.
12. Place downspouts away from building entries. Water discharged should not run across sidewalks. Provide concrete splash blocks at grade draining or connected directly to the storm drainage system.

**D07.6. Roof Vents and Elements**

1. Minimize and consolidate roof penetrations into a single, inconspicuous point whenever possible.

2. PVC pipes and other utility elements shall be screened or finished to match the roof color.

3. Avoid the use of rooftop mechanical equipment, however for renovations and unavoidable configurations ensure units are screened. Mechanical roof pits are not permitted.

4. Provide access points and service routes to equipment that protect the roof.

5. Screen all large vents. Ridge vents are preferred. Louver grilles at gabled end walls are acceptable.

6. Ensure attic spaces are properly vented at ridges and soffits.

7. Match roof color for all exposed equipment and vents.

8. Avoid roof-mounted antenna systems. Consider the use of dormer vents to conceal and screen exhaust fans. Make mechanical vent sizes and shapes consistent with architectural elements.

9. Arrange Lightning Protection Systems (LPS) components in an ordered, uncluttered, inconspicuous appearance and integrated into the organization of the roof and wall systems.

10. Ensure that LPS roof mounting systems are approved by the roofing manufacturer.

11. Additions to a roof shall not interfere with LPS or other rooftop systems that may be required.

12. Permanent fall protection shall be included with any addition to a roof with a slope above 3:12 per UFC 3-110-03 to a roof with a slope above 3:12 per UFC 3-110-03.

**D07.7. Clerestories and Skylights**

1. Clerestories and skylights are permitted in Group 1 facilities. These are allowed in Group 3 facilities only when serving passive systems and are justifiable by life-cycle analysis.

2. Clerestories are preferred to skylights to avoid roof penetrations. Skylights, when permitted, must be simple in shape and integrated with the roof system to eliminate leakage.

3. Design clerestories and skylights using the same principles for seasonal shading that are required for walls and roof overhangs.

4. Translucent panel systems are preferred in clerestory applications due to lack of window cleaning.

5. Clerestories and skylights must comply with UFC 4-10-01.

**D07.8. Vegetated Roof**

1. Not applicable.

**D07.9. Roof Systems Materials**
**Note:** Apply the below base-wide standards for Roof Systems (products, materials and color). Then refer to the Appendix and apply any additional requirements specifically related to the Facility District in which the project is located.

Fairchild Air Force Base IFS
D08.1. Systems and Layouts

1. Pre-engineered structural steel framing may be used for Groups 1, 2 and 3 facilities; Installation-appropriate thermal envelopes, materials and detailing are required.

2. Select economical structural systems that integrate roof and wall systems. The FAFB BDS provides additional information on accepted structural design approaches.

3. Narrow buildings 60' or less in width with column-free interiors are preferred for office, administrative and personnel spaces; when interior columns are required optimize the structural grid layout for open-plan arrangements.

4. Fully coordinate structural grids with exterior window systems to align columns with window frames or wall systems.

5. When structure is exposed provide an organized appearance and coordinate with mechanical, electrical, plumbing, fire protection, information technology, and communications systems.

6. Limit the use of specialty systems (such as space frames, vaults or domes) and of structure as a visual feature.

7. Cost-effectively design interior bearing walls as thermal mass.

D08.2. Structural Systems Materials

D09. MECHANICAL, ELECTRICAL AND PLUMBING

Comply with AF Corporate Standards for Facilities Exteriors:
http://afcfs.wbdg.org/facilities-exteriors/index.html

Comply with AF Corporate Standards for Mechanical, Electrical and Plumbing:

Insert 3 photos for each facility group.

Group 1

Group 2

Group 3

Group 4
D09.1. Passive and Active Systems

1. Fully integrate passive heating and cooling systems into facility designs whenever practical for the local climate prior to the design of active mechanical systems.

2. Provide optimized passive and active systems; design active mechanical systems to supplement thermal mass walls and floors.

3. Develop renewable energy systems including geo-exchange (ground source heat pumps) when life cycle cost effective.

4. Performance display screens, which report energy performance and utility savings, are encouraged; when provided locate these in building lobbies or common areas.

5. Solar domestic hot water systems are required when life cycle cost effective for the climate.

6. Integrate shading into building exteriors to reduce solar heat gain during hot seasons.

D09.2. Functionality and Efficiency

1. Fully coordinate mechanical, electrical, plumbing (MEP) and fire protection systems with each other and with the building structure, enclosure, thermal envelope and interior design.

2. Ensure direct exterior access is provided (for CE) to main mechanical and electrical rooms.

3. Screen exterior equipment from primary views (landscape, building masses, screen walls) and comply with ATFP requirements.

4. Keep equipment away from main building entrances; locate service area/yard on least visible side of a building.

5. Coordinate the location of all exterior meters, equipment and devices to provide convenient access and an overall coordinated and orderly appearance.

6. Design emergency generator systems integrally with all other building systems and avoid incompatible building additions; locate generators near service areas and ensure they are not visible from primary entrances.

7. When structure is exposed as a finished ceiling, fully integrate MEP and fire protection systems to provide an organized uncluttered appearance.

8. Conceal ducts, piping, conduits, devices, etc., when permanent walls, suspended ceilings or raised floors are provided; locate sprinkler heads in orderly configuration.

9. Limit interior wall-mounted equipment in occupied personnel spaces; avoid surface-mounted conduit and pipes.

10. Provide efficient utility rooms with layouts to facilitate system performance and maintenance; provide convenient access to controls, clearly label systems and include operating and maintenance instructions.

11. Separate mechanical and electrical and communications rooms.

12. Integrate recessed and wall-mounted fixtures such as fire standpipe cabinets and drinking fountains within permanent walls.
E. FACILITIES INTERIORS

Comply with Air Force Corporate Standards for Facilities Interiors:
http://afcfs.wbdg.org/facilities-interiors/index.html

Insert 3 photos for each facility group.

Image Tool 250 x 188

Group 1

Group 2

Group 3

Group 4
E01. Building Configurations
Comply with Air Force Corporate Standards for Building Configurations:

1. Provide open-plan configurations for office, administrative, operational and related activities and spaces for maximum flexibility. Use a "core and shell" approach in which all building systems, infrastructure and permanent interior partitions anticipate two or more uses (operations) during a facility's lifespan.

2. Create flexible interior configurations using Furniture, Fixtures & Equipment (FF&E) and limit private offices and private rooms. Refer to AFMAN 32-1084 for space requirements. To the greatest extent, limit permanent partitions to core areas such as toilet rooms, stairs, mechanical and utility rooms.

3. Use more durable long-lasting finishes in core areas for walls, ceilings, floor coverings and built-in casework. Coordinate interior FF&E layouts with structural grids during space planning.

4. Provide high-performance building configurations following UFC 1-200-02. Ensure passive design strategies are cost effectively incorporated before active mechanical systems are designed.

5. Comply with UFC 1-200-01, general building requirements. UFC 1-200-01 provides applicability of model building codes and government unique criteria for typical design disciplines and building systems, as well as for accessibility, antiterrorism, security, high performance and sustainability requirements, and safety.

7. Comply with AFCFS for supporting mission requirements, addressing human comfort and well being, and creating highly flexible interiors while satisfying metrics for high performance and sustainable buildings.

8. Provide a level of quality for interior features, materials and finishes that is appropriate for the Facility Group number. Group 1 may receive higher quality than Groups 2 thru 4. Refer to Facility Hierarchy.

9. Through open-plan configurations, preserve all passive and natural design strategies and fully integrate facility interiors with overall building systems.

10. Professional interior designers, or architects with significant interior design experience, must accomplish the design and review of applicable new construction, renovations and maintenance projects.

11. Consult with the State Historic Preservation Officer (SHPO) and base-level Historic Preservation offices regarding proposed changes to properties listed on or eligible for listing on the National Register of Historic Places. Follow requirements of The National Historic Preservation Act and Secretary of the Interior Standards for the Treatment of Historic Properties.

12. Maintain architectural compatibility following AFCFS and this Installation Facilities Standards (IFS) document to create continuity while avoiding monotony.

E01.1. Layout and Common Areas
Comply with Air Force Corporate Standards for Layout and Common Areas:

1. Create open-plan interior environments to accommodate changes.

2. Limit interior partitions, private offices and rooms; use furniture or modular systems to provide privacy and acoustic control.

3. When partitions are functionally justified such as for conference rooms, use systems furniture and moveable (demountable) floor-to-ceiling wall systems for acoustical or visual privacy.

4. Proportion lobbies and common spaces based on type of function, activity and facility group.
5. Allow no direct sight lines into restrooms.

6. Situate utility and core areas to minimize impact on daylighting and to maximize use as thermal buffers.

7. Ensure electrical, lighting and communications system can be adaptable to configuration changes.

8. Avoid power poles to the maximum extent; when poles are necessary minimize the number and coordinate locations with furniture placement and other elements.

9. Avoid sloping floors to maintain flexibility and eliminate future structural changes.

10. Special consideration may apply to Sensitive Compartmented Information Facilities (SCIFs).

E01.1.1. Interior Design Process

Each designer appointed to projects affecting interior environments has the opportunity to propose a materials palette that will effectively activate, and enrich the spaces, either new or existing, that they are upgrading or constructing. The 92 CES will offer guidance on general approaches to interior design, and design proposals will be reviewed on an individual project basis. The FAFB BDS provides additional guidance on the submission of materials boards and samples.

1. Comply with UFC 3-120-10 for the Comprehensive Interior Design (CID,) which includes both Structural Interior Design (SID) and Furniture, Fixtures & Equipment (FF&E) design services.

2. Use a collaborative, integrated planning and design team, composed of user, government support staff, and appropriate professionals. Integrate architectural features using simple detailing to create a professional appearance; avoid extravagant or excessive detailing.

3. Ensure interior designs satisfy the functional requirements within the context of flexibility, sustainability and the building's energy performance.

4. Base space planning on square foot allocations from AFM 32-1084. Identify special requirements if any, such as privacy separation, VIP areas, gathering spaces and storage. Note: The occupant's rank and position will influence the square footage and selection of materials.

5. Provide clear circulation and pathway finding for both horizontal and vertical directions that accommodate the number of personnel in the facility.

6. Maximize efficiencies in the space plan for functional relationships and adjacencies for all facility users. Efficiently create and situate rooms and support rooms such as conference/meeting rooms and break rooms.

7. Provide interior design building-related illustrations, drawings, schedules, materials selections, specifications and cost estimates as listed in UFC 3-120-10. Refer to Furnishings in this IFS also.

8. SID Format shall follow HQ AFCEC standards.

9. Base the FF&E package on the furniture footprint developed in the SID. Identify all new or existing equipment needed and its users within each facility or each area of the facility. Provide specific information on: equipment sizes, electrical requirements, ventilation requirements, weight (if heavy), quantity, and security level if required. Presume all administrative spaces have computers and supporting equipment.

E01.1.2. Codes and Regulations

1. Refer to UFC 1-200-01 for modifications to the International Building Code (IBC) to determine applicable sections of the IBC. Both the IBC Chapter 3 and UFC 3-600-01 govern “Use and Occupancy Classification” for example.

2. Fire code requirements shall be as defined in the International Building Code (IBC) and must be used where dictated by UFC 1-200-01 DoD Building Code (General Building Requirements) except where noted in UFC 3-600-01 (Fire Protection Engineering For Facilities).
3. National Fire Protection Association (NFPA) 101 must be utilized to determine the occupancy classification as it relates to fire/smoke resistance rating of interior non-load bearing partitions (other than occupancy separation), means of egress, interior finish, features of fire protection (including vertical openings) and associated requirements.

### E01.2. Quality and Comfort

1. Include durability in the life cycle cost analysis for best-value material selections with long life expectancies that do not show excessive wearing.

2. Select long-lasting materials and finishes for permanent core areas such as lobbies, restrooms and stairs.

3. Select low-maintenance materials and products that reduce ongoing servicing and repair and that are easy to clean.

4. Relate the visual quality of finishes to the Facility Group number.

5. Building and interior configurations should address both operations and climatic responses.

6. Convey a professional image; avoid trendy patterns and textures.

7. Use materials and finishes that provide a healthy indoor environment.

8. Orient interior spaces toward views while maintaining cost-effective building performance and efficiency.

### E02. Floors

#### E02.1. Floor Materials

**Facility Group 1** floor materials shall be as follows.

- **Primary**: Prepared Slabs (Ground, Polished)
- **Secondary**: Porcelain tile
- **Tertiary**: Carpet, Rubber Stair Treads

**Facility Group 2** floor materials shall be as follows.

- **Primary**: Prepared Slabs (Ground, Polished)
- **Secondary**: Ceramic tile
- **Tertiary**: Carpet, Rubber Stair Treads

**Facility Group 3** floor materials shall be as follows.

- **Primary**: Prepared Slabs (Ground)
- **Secondary**: Prepared Slabs (Sealer)
- **Tertiary**: N/A

**Facility Group 4** floor materials shall be as follows.

- **Primary**: Carpet
- **Secondary**: Ceramic tile
- **Tertiary**: N/A

1. Natural stone and terrazzo flooring may be used in high traffic areas of Group 1 as approved on a case basis.

2. Resilient and rapidly renewable flooring may be used in low traffic areas in Group 1, 2 and 4.
3. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.

**Note:** Apply the below *base-wide standards* for Floors (products, materials and color). Then refer to the Appendix and apply any additional requirements specifically related to the Facility District in which the project is located.

### E02.1.1. Prepared Slabs

- **Type:** *Style 1, Ground and Polished*
  - **Applies to:** □ Group 1 □ Group 2 □ Group 3 □ Group 4 □ Other
  - **Mfr:** Local (TBD)
  - **Color:** Natural gray cement, light to dark beige local aggregates
  - **Finish:** Fine polished texture
  - **Model #:** Medium to small aggregate

E03. Walls
Comply with Air Force Corporate Standards for Walls:
http://afcs.wbdg.org/facilities-interiors/walls/index.html

E03.1. Wall Materials

Facility Group 1 wall materials shall be as follows.

Primary: Brick (or other as approved by the BCE)
Secondary: Gypsum board (painted)
Tertiary: Ceramic tile (restrooms)

Facility Group 2 wall materials shall be as follows.

Primary: Brick
Secondary: Gypsum board (painted)
Tertiary: Ceramic tile (restrooms)

Facility Group 3 wall materials shall be as follows.

Primary: Ground face block, sealed (do not paint)
Secondary: N/A
Tertiary: Ceramic tile (restrooms)

Facility Group 4 wall materials shall be as follows.

Primary: Gypsum board (painted)
Secondary: N/A
Tertiary: Ceramic tile (restrooms)
1. Follow UFC 3-450-01 (Vibration and Noise Control) for acoustic design issues including speech privacy, sound isolation or sound masking.

2. Select and apply paint with sheens (gloss levels) appropriate for the application following UFGS Section 09 90 00 Paints and Coatings.

3. Provide ceramic tile on wet walls of kitchens, toilet rooms, locker rooms, etc., in all facility groups.

4. Neutral split-face or ground-face integrally colored block with a clear sealer may be used in Group 3. Do not paint block.

5. Provide rubber base on drywall partitions in Groups 1 and 2.

6. Hardwood base may only be used in Group 1 as approved on a case basis.

7. Hardwood chair rails / bumper rails may be used in high-use areas of Groups 1 and 2; aqueous clear finishes are preferred to reduce maintenance; plastic chair rails are permitted only in medical applications.

8. Decorative moldings may be used only in Group 1 when approved on a case basis.

9. Corner guards are permitted only in high traffic spaces with wheeled or cart use such as private service areas in Groups 1 and 2; stainless steel corners guards with a brushed finish may be judiciously used in Group 3.

10. Group 4 may use painted composite wood base.

11. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.

**Note:** Apply the below base-wide standards for Walls (products, materials and color). Then refer to the Appendix and apply any additional requirements specifically related to the Facility District in which the project is located.

**E03.1.1. Concrete**

☐ Applicable  ☐ N/A
**E03.1.2. Masonry**

- **Type:** Modular Face Brick
- **Aplies to:**
  - Group 1
  - Group 2
  - Group 3
  - Other
- **Mfr.:** Local (TBD)
- **Color:** Red or brown blend (match exterior)
- **Finish:** Light texture
- **Model #:** Coursed unit masonry
- **Other:** Brick is preferred. Concrete block may only be used in Group 3 when approved by the BCE.

**UFGS:** Section 03 33 00 Cast-In-Place Architectural Concrete

## E04. Ceilings

Comply with Air Force Corporate Standards for Ceilings:  

### E04.1. Ceiling Materials
Facility Group 1 ceiling materials shall be as follows.

Primary: Exposed Framing (Roof / Floor Structure Above)
Secondary: Grid and Acoustical Tile
Tertiary: Gypsum board (painted)

Facility Group 2 ceiling materials shall be as follows.

Primary: Exposed Framing (Roof / Floor Structure Above)
Secondary: Grid and Acoustical Tile
Tertiary: Gypsum board (painted)

Facility Group 3 ceiling materials shall be as follows.

Primary: Exposed Framing (Roof / Floor Structure Above)
Secondary: Grid and Acoustical Tile
Tertiary: Gypsum board (painted)

Facility Group 4 ceiling materials shall be as follows.

Primary: Gypsum board (painted)
Secondary: N/A
Tertiary: N/A

1. Accent ceiling materials such as metal, wood, and rapidly renewable may be used in Group 1 as approved on a case basis.

2. Follow UFC 3-450-01 (Vibration and Noise Control) for acoustic design issues including speech privacy, sound isolation or sound masking.

3. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.

Note: Apply the below base-wide standards for Ceilings (products, materials and color). Then refer to the Appendix and apply any additional requirements specifically related to the Facility District in which the project is located.

E04.1.1. Exposed Framing (Roof / Floor Structure Above)

- Type: **Style 1**
- Applies to: [ ] Group 1 [ ] Group 2 [ ] Group 3 [ ] Group 4 [ ] Other
- Mfr: Vulcraft
- Color: Neutral colors reviewed on a case basis
- Finish: Field painted (Sheen per UFGS)
- Model #: Formlok floor and roof decking
- Other: N/A

E05. Doors and Windows
Comply with Air Force Corporate Standards for Doors and Windows:

E05.1. Doors and Windows and Frames Materials
Facility Group 1
door (frame) and window frame materials shall be as follows.
Primary: Aluminum, clear anodized
Secondary: Hollow metal (painted)
Tertiary: N/A

Facility Group 1
door (leaf) materials shall be as follows.
Primary: Hardwood veneer
Secondary: Hollow metal (painted)
Tertiary: N/A

Facility Group 2
door (frame) and window frame materials shall be as follows.
Primary: Aluminum, clear anodized
Secondary: Hollow metal (painted)
Tertiary: N/A

Facility Group 2
door (leaf) materials shall be as follows.
Primary: Hardwood veneer
Secondary: Hollow metal (painted)
Tertiary: N/A

Facility Group 3
door (frame) and window frame materials shall be as follows.
Primary: Hollow metal (galvanized, painted)
Secondary: Hollow metal (galvanized, painted)
Tertiary: N/A

Facility Group 3
door (leaf) materials shall be as follows.
Primary: Hollow metal (galvanized, painted)
Secondary: Hollow metal (galvanized, painted)
Tertiary: N/A

Facility Group 4
door (frame) and window frame materials shall be as follows.
Primary: Hardwood veneer
Secondary: Hollow metal (painted)
Tertiary: N/A

Facility Group 4
door (leaf) materials shall be as follows.
Primary: Wood solid core
Secondary: Composite solid core
Tertiary: N/A

1. Hardwood casings may be provided over metal frames in Group 1 as approved on a case basis.
2. Paneled textured doors are preferred in Group 4.
3. Do not use hollow-core wood doors.
4. Generally match original hardware in renovations.
5. Manufacturers listed below are only provided to establish a baseline of equivalency among all applicable manufacturers.

Note: Apply the below base-wide standards for Doors and Windows (products, materials and color). Then refer to the Appendix and apply any additional requirements specifically related to the Facility District in which the project is located.
