

## **PART II - PRIMARY SYSTEMS INFORMATION**

### **6. Telecommunications**

#### **1. Operation**

##### **a. System Description:**

The Telecommunications system consists of the outside plant cabling system, premises distribution system for the interior wiring, communications electronics and telephone instruments. The outside plant cabling system is described herein. The premises distribution system inside the facility and the communications room electronics were installed by the Medical Systems Infrastructure Modernization Program (MSIM) and no O&M information has been provided. The telephone instruments were provided by base communications and no O&M information has been provided.

The outside plant cabling system provides the cabling from the Dial Central Office to the building. This cable consists of copper cable and fiber optical cables installed as shown on the Diagrammatic Plan.
