

## **Electric Motors and Starters:**

1. Lubricate motor bearings.
2. Inspect and tighten electric connections on motor and starter.

**Warning:** When working on electrical components or motors provide lockout device, a lockout tag and a tag-out device on electrical breaker or on the motor disconnect switch, see sheet PART I - Page 5-9 & 5-10 for panel, breaker and/or disconnect switch. The devices shall be in full compliance with appendix 1i-13.

**Warning:** Disconnect control power circuit when working on electrical components.

**Warning:** Use only grounded or insulated (Underwriters' Laboratories [UL] approved) electrical equipment.

**Caution:** When performing any type of work around rotating machinery, keep extremities, long hair and loose clothing away from all rotating machinery.
