

PART II - PRIMARY SYSTEMS INFORMATION

V. Basic Intrusion Detection Systems (IDS)

1. Operation

a. System Description:

The Basic Intrusion Detection Systems (IDS) monitors and controls exterior doors, monitors doors to the receiving area and monitors the pharmacy area doors, windows and space.

Entry doors are equipped with a card reader, magnetic switch and an electric lock. When a staff member swipes a card and enters a Personnel Identification Number (PIN) the door will unlock.

Entering the receiving area requires entry of a Personnel Identification Number (PIN) to disarm the door switches and Passive Infrared (PIR) motion detectors.

Entering the pharmacy requires entering a Personnel Identification Number (PIN) to disarm the door switches and Passive Infrared (PIR) motion detectors.

All alarms report to the physical security through the Monitor Dynamics, Inc. (MDI) system installed in the building and connected to the existing MDI system in physical security.
