1.2 SUBMITTALS

NOTE: Review Submittal Description (SD) definitions in Section 01330 SUBMITTAL PROCEDURES and edit the following list to reflect only the submittals required for the project. Submittals should be kept to the minimum required for adequate quality control.

A "G" following a submittal item indicates that the submittal requires Government approval. Some submittals are already marked with a "G". Only delete an existing "G" if the submittal item is not complex and can be reviewed through the Contractor's Quality Control system. Only add a "G" if the submittal is sufficiently important or complex in context of the project.

For submittals requiring Government approval on Army projects, a code of up to three characters within the submittal tags may be used following the "G" designation to indicate the approving authority.

Codes for Army projects using the Resident Management System (RMS) are: "AE" for Architect-Engineer; "DO" for District Office (Engineering Division or other organization in the District Office); "AO" for Area Office; "RO" for Resident Office; and "PO" for Project Office. Codes following the "G" typically are not used for Navy, Air Force, and NASA projects.

Choose the first bracketed item for Navy, Air Force and NASA projects, or choose the second bracketed item for Army projects.

Government approval is required for submittals with a "G" designation; submittals not having a "G" designation are [for Contractor Quality Control approval.][for information only. When used, a designation following the "G" designation identifies the office that will review the submittal for the Government.] Submit the following in accordance with Section 01330 SUBMITTAL PROCEDURES:

SD-03 Product Data

Manufacturers catalog data shall be submitted for the following items:

- Clear Glass
- Tinted Glass
- Tempered Glass
- Figured Glass
- Glazing Units
- Fire-Rated Wired Glass
- Glazing Compound
- Elastomeric Sealing Compound
- Glazing Tape
- Wood Sash Putty
- Blocks and Spacers

SD-07 Certificates

Certificates shall be submitted for the following items showing conformance with the referenced standards contained in this section.

- Tempered Glass
- Fire Rated Wired Glass

1.3 DELIVERY, STORAGE AND HANDLING

Manufactured glass units shall be delivered and stored until installation in the manufacturer's container's and shall be clearly marked on the exterior as to type, and quantity of units.

When special moisture protection is required, glass shall be stored in accordance with the manufacturer's recommendations.

PART 2 PRODUCTS

2.1 GLASS MATERIALS

2.1.1 Clear Glass

Glass shall be plate or float type conforming to ASTM C 1036, Type I, Class 1, Quality q3.

2.1.2 Tinted Glass

Glass shall be plate or float type conforming to ASTM C 1036, Type I, Class 3, Quality q3. Tint shall be [light green] [gray] [bronze].

2.1.3 Tempered Glass

Tempered glass shall conform to ANSI Z97.1 and shall bear the ANSI safety glass marking.

Glass before tempering shall be the plate or float type conforming to ASTM C 1036, Type I, [Class 1, Clear] [Class 3, Tinted], Quality q3. Tint shall be [light green] [gray] [bronze].

2.1.4 Figured Glass

Glass shall be rolled type conforming to ASTM C 1036, Type II, [Class 1 (Translucent)] [Class 3, (Tinted)], Quality q8 (Glazing), Pattern p3 (Random), Finish f1 (patterned one side).

2.1.5 Glazing Units

Factory fabricated units shall be two panels of clear plate or float glass separated by a dehydrated air space, hermetically sealed.

2.1.6 Fire-Rated Wired Glass

Glass shall be UL approved for fire windows and doors, shall be listed in the UL Bld Mat Dir, Guide Designation KCMZ, and shall bear the UL listing and marking. Thickness shall be 6 millimeter 1/4 inch. Glass shall conform to ASTM C 1036, Type II, Class 1, Form 1, Mesh [m1] [or] Mesh [2].

2.2 GLAZING MATERIALS

2.2.1 Glazing Compound

Elastic glazing compound shall conform to ASTM C 669.

Color of the glazing compound shall match the color of the sash as closely as possible.

2.2.2 Elastomeric Sealing Compound

Compound shall be one-component, nonsag, elastomeric type conforming to ASTM C 920. Compound shall match the color of the sash as closely as possible.

2.2.3 Glazing Tape

Tape shall be non-skinning, non-oily, reinforced class, butyl- or

polyisobutylene-base resilient preformed compound conforming to AAMA 800.

2.2.4 Wood-Sash Putty

Putty shall be the pure linseed oil type conforming to FS TT-P-00791, Type I.

2.2.5 Resilient Setting Blocks and Spacers

Blocks shall be solid chloroprene elastomeric extrusions having a Shore A durometer hardness between 70 and 90. Thickness shall be approximately the same as the glass-edge clearance dimension; the length shall be 100 millimeter 4 inches, minimum.

Spacers shall be solid chloroprene elastomeric extrusions having a Shore A durometer hardness between 40 and 50. Spacers shall be 50 to 80 millimeter 2 to 3 inches long with thickness and height to suit the application.

2.3 CLEANING SOLUTIONS

All cleaning solutions shall be compatible with the glazing materials and as recommended by the glass manufacturer or fabricator.

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION

3.1.1 Examination

Prior to installation, examine glass and glazing materials and correct defects which may adversely affect glazing work.

3.1.2 Preparation

Glass and glazing surfaces shall be cleaned prior to installation to remove foreign matter, glazing compounds, special coatings, dust, oil and contaminants and wipe dry.

3.2 INSTALLATION

Glass shall be installed in accordance with the manufacturer's printed instructions and as specified.

Operable sash shall move freely and properly in the frame of the unit prior to the start of glazing. Movable items shall be securely fixed or in a closed and locked position until the glazing material has set.

Sizes and proper edge clearances shall be determined by measuring the actual unit to receive glass. Each piece of glass shall bear the manufacturer's label to identify its type as well as thickness and quality. Labels shall not be removed until final approval is obtained.

3.3 GLASS PROTECTION

Glazed openings shall be identified during the construction period by tapes or flags that are not in contact with the glass.

Temporary labels shall be removed after the glass and glazing work has been approved.

3.4 CLEANING

Upon completion of work, glass surfaces shall be cleaned and shall be free of glazing- or sealing-compound, smears, and other defacement.

-- End of Section --
