## UNIFIED FACILITIES GUIDE SPECIFICATIONS

References are in agreement with UMRL dated July 2012

\*\*\*\*\*

### SECTION 09 66 23

#### RESINOUS TERRAZZO FLOORING 08/10

\*\*\*\*\*

NOTE: This guide specification covers the requirements for resinous terrazzo flooring and conductive resinous terrazzo flooring.

Adhere to [UFC 1-300-02](#) Unified Facilities Guide Specifications (UFGS) Format Standard when editing this guide specification or preparing new project specification sections. Edit this guide specification for project specific requirements by adding, deleting, or revising text. For bracketed items, choose applicable items(s) or insert appropriate information.

Remove information and requirements not required in respective project, whether or not brackets are present.

Comments, suggestions and recommended changes for this guide specification are welcome and should be submitted as a [Criteria Change Request \(CCR\)](#).

\*\*\*\*\*

#### PART 1 GENERAL

\*\*\*\*\*

NOTE: The resinous terrazzo floor systems covered by this guide specification may be used in lieu of portland cement terrazzo where the light weight of the thin set system would be advantageous.

The conductive resinous terrazzo flooring is primarily intended for use in areas where volatile materials are handled, clean-rooms, parachute assembly areas, etc. These systems, which have a wear factor four times better than cementitious terrazzo and five to six times better than vinyl may be used, when economically justified, in hard wear areas where there is a need for a high degree of cleanliness, a decorative effect, and some chemical resistance. These systems will not be used over lightweight concrete and will not be used in lieu of

quarry tile in kitchens.

The selection of a floor system for a location where resistance to specific conditions is important should be based upon the ability of the system to withstand required exposure conditions. For example, polyesters are suitable where resistance to detergents is required but should not be used in laboratory or other areas where spillage of sodium hydroxide or similar strong alkaline solution occurs; epoxies should not be used where resistance to oxidizing acids is required or where resistance to temperatures in excess of 54 degrees C (130 degrees F) is required; latex mastic and resin emulsions should not be used where resistance to strong acids or alkalis is required. Each job should be evaluated on its own merits considering exposure conditions, costs, and local experience with the various systems.

Areas to receive terrazzo will be shown on the drawings. Color should be shown by specifying a selected plate number from the NTMA publication, "Terrazzo Information Guide." Example: NTMA terrazzo catalog, plate No. S-301-4. Colors selected may be any combination of standard marble granules of domestic origin available in the local market, but it is highly desirable that color combinations be designated by NTMA color plates.

\*\*\*\*\*

## 1.1 REFERENCES

\*\*\*\*\*

NOTE: This paragraph is used to list the publications cited in the text of the guide specification. The publications are referred to in the text by basic designation only and listed in this paragraph by organization, designation, date, and title.

Use the Reference Wizard's Check Reference feature when you add a RID outside of the Section's Reference Article to automatically place the reference in the Reference Article. Also use the Reference Wizard's Check Reference feature to update the issue dates.

References not used in the text will automatically be deleted from this section of the project specification when you choose to reconcile references in the publish print process.

\*\*\*\*\*

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

ASTM INTERNATIONAL (ASTM)

ASTM D56 (2005; R 2010) Flash Point by Tag Closed Cup Tester

GREENGUARD ENVIRONMENTAL INSTITUTE (GEI)

GEI Greenguard Standards for Low Emitting Products

NATIONAL FIRE PROTECTION ASSOCIATION (NFPA)

NFPA 99 (2012; TIA 11-1; TIA 11-2; Errata 12-1) Health Care Facilities Code

NATIONAL TERRAZZO & MOSAIC ASSOCIATION (NTMA)

NTMA Info Guide (2000) Terrazzo Information Guide

SCIENTIFIC CERTIFICATION SYSTEMS (SCS)

SCS Scientific Certification Systems (SCS) Indoor Advantage

## 1.2 SYSTEM DESCRIPTION

\*\*\*\*\*

NOTE: Conductive floors will be used at operations where explosives having an electrostatic sensitivity of 0.1 joule or less such as primer, detonator, igniter, and incendiary mixtures are exposed. Conductive floors are also required where the following are performed:

- a. Loose unpacked ammo with electric primers.
- b. Exposed electro-explosive devices.
- c. Electrically initiated items with exposed electric circuitry.
- d. Hazardous materials that could be ignited by static discharge from humans.

\*\*\*\*\*

Apply resinous terrazzo flooring, in the colors indicated, in the areas shown on the approved detail drawings. Submit two 150 x 150 mm 6 x 6 inches, (minimum) samples of each color of resinous terrazzo and two 150 mm 6 inches lengths, of each type of strip. Flooring shall be [[an epoxy terrazzo system that conforms to the requirements specified in paragraphs 2.01A and B of NTMA Info Guide] [ or ] [a polyester terrazzo flooring system that conforms to the requirements specified in paragraphs 2.01A and B of NTMA Info Guide.]] [a conductive [epoxy terrazzo system that conforms to the requirements specified in paragraphs 2.01A, B, and H of NTMA Info Guide.] [or] [polyester terrazzo flooring system that conforms to the requirements specified in paragraphs 2.10A, B, and J of NTMA Info Guide].]

## 1.3 SUBMITTALS

\*\*\*\*\*

NOTE: Review submittal description (SD) definitions in Section 01 33 00 SUBMITTAL PROCEDURES and edit

the following list to reflect only the submittals required for the project.

The Guide Specification technical editors have designated those items that require Government approval, due to their complexity or criticality, with a "G." Generally, other submittal items can be reviewed by the Contractor's Quality Control System. Only add a "G" to an item, if the submittal is sufficiently important or complex in context of the project.

For submittals requiring Government approval on Army projects, a code of up to three characters within the submittal tags may be used following the "G" designation to indicate the approving authority. Codes for Army projects using the Resident Management System (RMS) are: "AE" for Architect-Engineer; "DO" for District Office (Engineering Division or other organization in the District Office); "AO" for Area Office; "RO" for Resident Office; and "PO" for Project Office. Codes following the "G" typically are not used for Navy, Air Force, and NASA projects.

Choose the first bracketed item for Navy, Air Force and NASA projects, or choose the second bracketed item for Army projects.

\*\*\*\*\*

Government approval is required for submittals with a "G" designation; submittals not having a "G" designation are for [Contractor Quality Control approval.] [information only. When used, a designation following the "G" designation identifies the office that will review the submittal for the Government.] Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

#### SD-02 Shop Drawings

Approved Detail Drawings[; G][; G, [\_\_\_\_]]  
Strips[; G][; G, [\_\_\_\_]]

#### SD-07 Certificates

Conductive Resinous Terrazzo Flooring

## 1.4 QUALITY ASSURANCE

### 1.4.1 Applicator

Applicator shall be approved by the resin manufacturer and shall have a minimum of 3 years experience in the application of the materials to be used and shall have completed 8 successful installations within the past 2 years.

### 1.4.2 Sustainable Design Certification

Product shall be third party certified by **GEI** Greenguard Indoor Air Quality Certified, **SCS** Scientific Certification Systems Indoor Advantage or equal. Certification shall be performed annually and shall be current.

## 1.5 DELIVERY, STORAGE, AND HANDLING

Deliver materials to the project site in manufacturer's original unopened containers. Keep materials in a clean, dry, area with temperatures controlled between **10 and 33 degrees C** **50 and 90 degrees F**.

## 1.6 ENVIRONMENTAL REQUIREMENTS

Areas to receive terrazzo shall be maintained at a temperature above **10 degrees C** **50 degrees F** for 2 days prior to installation and for 7 days following installation.

## PART 2 PRODUCTS

### 2.1 PRIMER

Primer shall be a material recommended by the resin manufacturer which will penetrate the pores of the substrate and bond with the topping to form a permanent monolithic bond between the substrate and the topping.

### 2.2 RESIN

Resin for the specified terrazzo flooring shall conform to the requirements shown in **NTMA Info Guide**. Submit resin manufacturer's descriptive data, plus mixing, proportioning, and installation instructions.

### 2.3 FILLERS

Fillers, if required, shall be inert mineral or cellulosic material as recommended by the manufacturer and best suited for the resin binder used. Fillers shall be furnished in the quantity necessary to impart the required color and physical characteristics.

### 2.4 MARBLE CHIPS

Marble chips shall be of domestic origin of sizes and colors to match **NTMA Info Guide** color plate indicated [on the drawings] [in Section **09 06 90** COLOR SCHEDULE]. Chips shall be a range of sizes up to and including the NTMA Standard No. 0 and Standard No. 1 for **6 mm** **1/4 inch** thick floors and Standard No. 0 through Standard No. 2 for **10 mm** **3/8 inch** thick floors.

### 2.5 STRIPS

Submit drawings indicating the type, size, and layout of divider strips and

control joint strips.

#### 2.5.1 Divider Strips

\*\*\*\*\*

NOTE: Location of strips will be shown on the drawings. Strips should be used at logical stops and expansion joints. Manufacturer's literature should be reviewed when making selections for strips.

Plastic divider strips and control joint strips should be used with conductive type terrazzo.

\*\*\*\*\*

Divider strips shall be as deep as required, [\_\_\_\_\_] mm gauge and of [brass] [zinc] [plastic in color as indicated [on the drawings] [in Section 09 06 90 COLOR SCHEDULE]].

#### 2.5.2 Control Joint Strips

Control joint strips shall be as deep as required, [\_\_\_\_\_] mm gauge and of [brass] [zinc] [plastic in color as indicated [on the drawings] [in Section 09 06 90 COLOR SCHEDULE]]. Neoprene filler shall be [\_\_\_\_\_] mm inches thick in color as indicated [on the drawings] [in Section 09 06 90 COLOR SCHEDULE].

#### 2.6 GROUT

Grout shall be as recommended by the manufacturer of the resin.

#### 2.7 SEALER

Sealer shall have a pH factor between 7 and 10 and shall be a penetrating type specially prepared for use on terrazzo. The sealer shall not discolor or amber the terrazzo and shall produce a slip resistant surface. Flash point of sealer shall be a minimum of 27 degrees C 80 degrees F when tested in accordance with ASTM D56.

### PART 3 EXECUTION

#### 3.1 PREPARATION OF CONCRETE SUBFLOOR

Installation of the floor topping shall not commence until the concrete substrate is at least 28 days old. The concrete surfaces shall be prepared in accordance with the instructions of the resin manufacturer.

#### 3.2 MIXING, PROPORTIONING, AND INSTALLATION

\*\*\*\*\*

NOTE: Terrazzo topping thickness will be determined by the marble chip size indicated in the selected NTMA-01 color plate referenced in paragraph MARBLE CHIPS. If the cross-section is less than 10 mm (3/8 inch) the use of No. 1 and No. 0 size chips will be required. Delete last sentence if resinous terrazzo bases are not required.

\*\*\*\*\*

Mixing, proportioning, and installing shall be in accordance with the

approved instructions of the manufacturer. Strips shall be installed in locations indicated. The topping shall be applied to give a finish thickness of [6] [10] mm [1/4] [3/8] inch. Bases shall be cove type cast-in-place with 25 mm 1 inch radius cove and shall be [100] [150] mm [4] [6] inch high.

### 3.3 TESTING

Between 30 and 45 days after flooring installation is completed, and prior to its use, the conductive resinous terrazzo flooring shall be tested in accordance with paragraph 12-4.1.3.8(b) (7) of NFPA 99. The resistance of the conductive floor at any one location shall be more than 5,000 ohms in areas with 110 volts service, more than 10,000 ohms in areas with 220 volt service, and average less than 1,000,000 ohms and more than 25,000 ohms in all areas. Submit certificates indicating conformance with specified requirements. Certificates shall be accompanied by certified test reports showing that the conductive resinous terrazzo floor has been tested and meets the requirements specified.

### 3.4 CLEANING AND SEALING

The terrazzo shall be washed with a neutral cleaner and where required shall be cleaned with a fine abrasive to remove any stains or cement smears. The cleaned surfaces shall be rinsed. When dry, a terrazzo sealer shall be applied in accordance with the manufacturer's directions. Submit maintenance literature for terrazzo cleaning and sealing.

### 3.5 PROTECTION

The terrazzo work shall be covered and protected from damage until completion of the work of all other trades.

-- End of Section --
