## UNIFIED FACILITIES GUIDE SPECIFICATIONS

References are in agreement with UMRL dated July 2015

\*\*\*\*\*

### SECTION 32 12 11

#### BITUMINOUS SURFACE TREATMENT 11/08

\*\*\*\*\*

NOTE: This guide specification covers the requirements for single and double bituminous surface treatment of pavements for airfields, roads, streets, parking areas, and other general applications.

Adhere to UFC 1-300-02 Unified Facilities Guide Specifications (UFGS) Format Standard when editing this guide specification or preparing new project specification sections. Edit this guide specification for project specific requirements by adding, deleting, or revising text. For bracketed items, choose applicable items(s) or insert appropriate information.

Remove information and requirements not required in respective project, whether or not brackets are present.

Comments, suggestions and recommended changes for this guide specification are welcome and should be submitted as a Criteria Change Request (CCR).

\*\*\*\*\*

#### PART 1 GENERAL

##### 1.1 MEASUREMENT PROCEDURES

\*\*\*\*\*

NOTE: Delete this paragraph when lump sum bidding is used.

\*\*\*\*\*

The bituminous material and aggregate to be paid for will be the measured quantities used in the accepted work.

##### 1.1.1 Bituminous Material

The amount of bituminous material to be paid for will be measured in [metric 2000 pounds tons] [the number of liters gallons of material used in the

accepted work, corrected to liters at 15.6 degrees C gallons at 60 degrees F in accordance with [ASTM D633] [ASTM D1250, using a coefficient of expansion of 0.00045 per degree C 0.00025 per degree F for asphalt emulsion]].

#### 1.1.2 Aggregate

The amount of aggregate paid for will be the number of [metric 2000 pounds tons] [cubic meters yards] of aggregate placed and accepted in the completed work or placed in authorized stockpiles.

#### 1.1.3 Quantity Limits

\*\*\*\*\*  
**NOTE: Only the appropriate application rates consistent with the gradations of paragraph "Mineral Aggregate" will be retained.**  
\*\*\*\*\*

The bituminous material and aggregate shall be spread within the quantity limits shown in PART 2; bids shall be based on the mean of the values in the tables. The individual quantities of bituminous material and aggregate may be varied to meet specific field conditions at all times during progress of the work, as directed, without adjustments to contract unit prices.

#### 1.2 PAYMENT PROCEDURES

\*\*\*\*\*  
**NOTE: Delete this paragraph when lump sum bidding is used.**  
\*\*\*\*\*

The quantities of aggregates and bituminous material, determined as specified in paragraph MEASUREMENT FOR PAYMENT, will be paid for at the respective contract unit prices, which payment shall constitute full compensation for all operations necessary to complete the work as specified herein.

#### 1.3 WAYBILLS AND DELIVERY TICKETS

Submit copies of waybills and delivery tickets during progress of the work. Before the final statement is allowed, file with the Contracting Officer certified waybills and delivery tickets for aggregate and bituminous material used in the bituminous surface treatment. Do not remove bituminous material from the tank car or storage tank until initial outage and temperature measurements have been taken; nor shall the car or tank be released until final outage has been taken.

#### 1.4 REFERENCES

\*\*\*\*\*  
**NOTE: This paragraph is used to list the publications cited in the text of the guide specification. The publications are referred to in the text by basic designation only and listed in this paragraph by organization, designation, date, and title.**

Use the Reference Wizard's Check Reference feature when you add a RID outside of the Section's Reference Article to automatically place the reference in the Reference Article. Also use the Reference Wizard's Check Reference feature to update the issue dates.

References not used in the text will automatically be deleted from this section of the project specification when you choose to reconcile references in the publish print process.

\*\*\*\*\*

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

ASTM INTERNATIONAL (ASTM)

ASTM C131/C131M	(2014) Standard Test Method for Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine
ASTM C136/C136M	(2014) Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates
ASTM C29/C29M	(2009) Standard Test Method for Bulk Density ("Unit Weight") and Voids in Aggregate
ASTM C88	(2013) Standard Test Method for Soundness of Aggregates by Use of Sodium Sulfate or Magnesium Sulfate
ASTM D1139/D1139M	(2009) Aggregate for Single or Multiple Bituminous Surface Treatments
ASTM D1250	(2008) Standard Guide for Use of the Petroleum Measurement Tables
ASTM D140/D140M	(2014) Standard Practice for Sampling Bituminous Materials
ASTM D2028/D2028M	(2015) Cutback Asphalt (Rapid-Curing Type)
ASTM D2397/D2397M	(2013) Standard Specification for Cationic Emulsified Asphalt
ASTM D3381/D3381M	(2013) Viscosity-Graded Asphalt Cement for Use in Pavement Construction
ASTM D3625/D3625M	(2012) Standard Practice for Effect of Water on Bituminous-Coated Aggregate Using Boiling Water
ASTM D633	(2011) Volume Correction Table for Road Tar
ASTM D75/D75M	(2014) Standard Practice for Sampling

## Aggregates

ASTM D946/D946M (2009a) Penetration-Graded Asphalt Cement  
for Use in Pavement Construction

ASTM D977 (2013; E 2014) Emulsified Asphalt

### 1.5 SUBMITTALS

\*\*\*\*\*

NOTE: Review submittal description (SD) definitions in Section 01 33 00 SUBMITTAL PROCEDURES and edit the following list to reflect only the submittals required for the project.

The Guide Specification technical editors have designated those items that require Government approval, due to their complexity or criticality, with a "G." Generally, other submittal items can be reviewed by the Contractor's Quality Control System. Only add a "G" to an item, if the submittal is sufficiently important or complex in context of the project.

For submittals requiring Government approval on Army projects, a code of up to three characters within the submittal tags may be used following the "G" designation to indicate the approving authority. Codes for Army projects using the Resident Management System (RMS) are: "AE" for Architect-Engineer; "DO" for District Office (Engineering Division or other organization in the District Office); "AO" for Area Office; "RO" for Resident Office; and "PO" for Project Office. Codes following the "G" typically are not used for Navy, Air Force, and NASA projects.

An "S" following a submittal item indicates that the submittal is required for the Sustainability Notebook to fulfill federally mandated sustainable requirements in accordance with Section 01 33 29 SUSTAINABILITY REPORTING.

Choose the first bracketed item for Navy, Air Force and NASA projects, or choose the second bracketed item for Army projects.

\*\*\*\*\*

Government approval is required for submittals with a "G" designation; submittals not having a "G" designation are for [Contractor Quality Control approval.][information only. When used, a designation following the "G" designation identifies the office that will review the submittal for the Government.] Submittals with an "S" are for inclusion in the Sustainability Notebook, in conformance to Section 01 33 29 SUSTAINABILITY REPORTING. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-03 Product Data

Waybills and Delivery Tickets  
Cutback Asphalt  
Asphalt Cement

## SD-06 Test Reports

### Tests

#### 1.6 QUALITY ASSURANCE

##### 1.6.1 Safety Precautions

[No smoking, or open flames shall be permitted within 8 m 25 feet of heating, distributing, or transferring operations of bituminous materials other than bituminous emulsions.] [When tar is used, a full-face, organic, vapor-type respirator and protective creams shall be used by personnel exposed to fumes. Protective creams shall not substitute for cover clothing.]

##### 1.6.2 Sampling and Testing

Sampling and testing is the responsibility of the Contractor. Sampling and testing shall be performed by an approved commercial testing laboratory, or by the Contractor, subject to approval. Sampling shall be in accordance with ASTM D75/D75M for aggregates and ASTM D140/D140M for bituminous material, unless otherwise directed. Perform aggregate gradation tests on each sample in accordance with ASTM C136/C136M. Perform all other aggregate tests on the initial source samples and repeat tests when there is a change of source. Perform sieve analyses daily from material samples. The tests shall include an analysis of each gradation of material. Perform tests in sufficient number to ensure that materials meet specified requirements. Submit copies of test results, within 24 hours after completion of each test.

##### 1.6.3 Wear Test

Perform the wear test in accordance with ASTM C131/C131M to ensure that aggregates have a percentage of wear not exceeding 40 percent after 500 revolutions. One test shall be performed for every [\_\_\_\_\_] [metric tons tons] [cubic meters yards] of aggregates in stockpiles or at the source.

##### 1.6.4 Soundness Test

\*\*\*\*\*

NOTE: The magnesium-sulfate soundness test is to be used in excluding aggregates known to be unsatisfactory or for evaluating aggregates from new sources. The maximum allowable percentage of loss will be inserted in the blank and normally should be within the range of 10 to 15 percent. The values used will be based on knowledge of aggregates in the area that have been previously approved or that have a satisfactory service record in bituminous pavement construction for at least 5 years and will assure that aggregates from new sources will be equal to or better than these aggregates.

\*\*\*\*\*

Perform the soundness test as specified by ASTM C88 to ensure that

aggregates have a weight loss not greater than [\_\_\_\_][12] percent when subjected to five cycles of the magnesium sulfate test. One test shall be performed for every [\_\_\_\_][metric tons tons][cubic meters yards] of aggregates in stockpiles or at the source.

#### 1.6.5 Stripping Test

Perform stripping tests meeting the requirements of ASTM D3625/D3625M. Deleterious substances shall not exceed the requirements of ASTM D1139/D1139M.

#### 1.7 DELIVERY, STORAGE, AND HANDLING

Inspect the materials delivered to the site for contamination and damage. Unload and store the materials with a minimum of handling. Store aggregates preventing segregation and contamination.

#### 1.8 ENVIRONMENTAL REQUIREMENTS

Apply bituminous surface treatment only when the existing surface or base course is dry or contains moisture not in excess of the amount that will permit uniform distribution and the desired adhesion. Bituminous surface treatment shall not be applied when either the atmospheric temperature, in the shade, is below [10][15.5] degrees C [50][60] degrees F or the pavement surface to be treated is below 20 degrees C 70 degrees F unless otherwise directed.

### PART 2 PRODUCTS

#### 2.1 EQUIPMENT

Provide equipment dependable and adequate for the purpose intended and properly maintained in satisfactory and safe operating condition at all times. Discontinue the use of equipment which fails to produce satisfactory work and replace with satisfactory equipment. Calibrated equipment such as asphalt distributors, scales, batching equipment, spreaders and similar equipment, shall have been recalibrated by an approved calibration laboratory within [12] [\_\_\_\_] months prior to commencing work [and every [\_\_\_\_] months thereafter, by such laboratory from the date of recalibration, during the term of the contract].

##### 2.1.1 Bituminous Distributors

The distributors shall have pneumatic tires of such width and number that the load produced on the base surface does not exceed 11.6 kg per mm 650 pounds per inch of tire width. Distributors shall be designed and equipped to distribute bituminous material uniformly at even heat on various widths of surface at readily determined and controlled rates ranging from 0.20 to 9.1 L/square meter 0.05 to 2.00 gallons/square yard, with a pressure range of 172 to 517 kPa 25 to 75 psi. The allowable variation from any specified rate shall not exceed 5 percent. Distributor equipment shall include a separate power unit for the bitumen pump, full-circulation spray bars, tachometer, pressure gauges, volume-measuring devices, a thermometer for reading the temperature of tank contents, and a hose attachment suitable for applying bituminous material to areas not accessible with distributor spray bar. The distributor shall be equipped for circulation and agitation of bituminous material during the heating process.

### 2.1.2 Single-Pass, Surface-Treatment Machines

The machines shall be capable of spraying bituminous material and spreading aggregate in one pass. Bituminous spraying equipment shall conform to the requirements given above for a bituminous distributor. The machine shall be capable of spreading aggregates at controlled amounts per square yard as specified. In addition, the single-pass, surface-treatment machine shall be capable of placing a surface treatment adjacent to an existing surface treatment, forming a joint of the same thickness and uniformity as other portions of the surface treatment. Ridges or blank spaces will not be permitted. Joints in the second application shall be formed at least 300 mm 1 foot from those formed in the first application.

### 2.1.3 Heating Equipment for Storage Tanks

The equipment shall consist of coils and equipment for producing steam or hot oil and be designed to prevent the introduction of steam or hot oil into the material. An armored thermometer with a range of 35 to 200 degrees C 100 to 400 degrees F shall be affixed to the tank so the temperature of the bituminous material may be determined at all times.

### 2.1.4 Power Rollers

Power rollers shall be steel-wheeled or pneumatic-tired type, conforming to the following requirements:

- a. Steel-wheeled rollers shall have at least one steel drum and weigh a minimum of 4 metric tons 5 tons. Steel wheels of the rollers shall be equipped with adjustable scrapers.
- b. Pneumatic-tired rollers shall be self-propelled and have wheels mounted on two axles in such manner that the rear tires will not follow in the tracks of the forward group. Tires shall be uniformly inflated to not less than 414 kPa 60 psi nor more than 552 kPa 80 psi pressure. The pneumatic-tired rollers shall be equipped with boxes or platforms for ballast loading and shall be loaded so that the tire print width of each wheel is not less than the clear distance between tire prints.

### 2.1.5 Mechanical Spreaders

The spreaders shall be adjustable and capable of spreading aggregate at controlled amounts per square yard, as specified.

### 2.1.6 Brooms and Blowers

The machines shall be of the power type, capable of cleaning surfaces to be treated.

### 2.1.7 Scales

The scales shall be standard truck scales of the beam type equipped with a weight-recording device. The scales shall be sufficient in size and capacity to accommodate the trucks used in hauling aggregates. The scales shall be tested and approved by an inspector of the State Inspection Bureau charged with scale inspection within the state in which the project is located. If an official of the inspection bureau is not available, the scales shall be tested in accordance with state specifications in the presence of the Contracting Officer. Keep the necessary number of standard

weights on hand, at all times, for testing the scales.

#### 2.1.8 Weighhouse

Provide a weatherproof weighhouse constructed in a manner to afford adequate protection for the indicating and recording devices of the scales.

### 2.2 MATERIALS

\*\*\*\*\*

**NOTE: Delete designations, materials, grades, and aggregate sizes which are not available or desirable for the project. In selecting alternate materials, consider the cost effect of competition between materials along with engineering considerations.**

\*\*\*\*\*

Use mineral aggregate and bituminous material of the following types, gradations, grades, and consistencies that meet the requirements of stripping, wear, and soundness tests as specified in paragraph SAMPLING AND TESTING.

#### 2.2.1 Mineral Aggregate

\*\*\*\*\*

**NOTE: The desired gradations to be used for the project will be specified. For single surface treatment, select the required gradation from the table for single bituminous surface treatment. For double surface treatment, select the required gradations (either No. 1 and No. 2 or No. 3 and No. 4) from the table for double bituminous surface treatment.**

\*\*\*\*\*

Provide aggregate consisting of crushed stone, crushed gravel, or crushed slag of such nature that thorough coating of bituminous material, used in the work, will not strip off upon contact with water. Moisture content of the aggregate shall be such that the aggregate will be readily coated with the bituminous material. Drying may be required, as directed. Aggregate shall conform to the gradation shown below. Determine gradation of the aggregates by ASTM C136/C136M.

AGGREGATE GRADATION SINGLE BITUMINOUS SURFACE TREATMENT (PERCENT BY WEIGHT PASSING)			
Sieve Designation (mm)	No. 1	No. 2	No. 3
25.01 inch	100	--	--
19.03/4 inch	90-100	100	--
12.51/2 inch	20-55	90-100	100
9.53/8 inch	0-15	40-70	85-100

AGGREGATE GRADATION SINGLE BITUMINOUS SURFACE TREATMENT (PERCENT BY WEIGHT PASSING)			
Sieve Designation (mm)	No. 1	No. 2	No. 3
4.75No. 4	0-5	0-15	10-30
2.36No. 8	--	0-5	0-10
1.18No. 16	--	--	0-5

  

AGGREGATE GRADATION DOUBLE BITUMINOUS SURFACE TREATMENT (PERCENT BY WEIGHT PASSING)				
Sieve Designation (mm)	No. 1	No. 2	No. 3	No. 4
25.01 inch	100	--	--	--
19.03/4 inch	90-100	--	100	--
12.51/2 inch	20-55	100	90-100	--
9.53/8 inch	0-15	85-100	40-70	100
4.75No. 4	0-5	10-30	0-15	85-100
2.36No. 8	--	0-10	0-5	10-40
1.18No. 16	--	0-5	--	0-10
0.30 mmNo. 50	--	--	--	0-5

#### 2.2.1.1 Crushed Stone

Provide crushed stone consisting of clean, sound, durable particles, free of soft or disintegrated pieces, dust, or foreign matter.

#### 2.2.1.2 Crushed Gravel

Provide crushed gravel consisting of clean, sound, durable particles, free of soft or disintegrated pieces or foreign matter. At least 90 percent by weight of the particles shall have at least two fractured faces.

#### 2.2.1.3 Crushed Slag

Provide crushed slag which is an air-cooled blast-furnace product having a dry weight of not less than 1120 kg/cubic meter 70 pcf, and consists of angular particles uniform in density and quality and free of dust and foreign matter. Determine the weight of a cubic meter foot of slag aggregate by ASTM C29/C29M.

#### 2.2.1.4 Aggregate Quantities

The bituminous material and aggregate shall be spread within the quantity limits shown below. The individual quantities of bituminous material and aggregate may be varied to meet specific field conditions at all times during progress of the work, as directed, without adjustments to contract

unit prices. Aggregate weights shown are for aggregates having a specific gravity of 2.65. If the specific gravity of the aggregate used is other than 2.65, appropriate adjustments shall be made in number of kg pounds required to ensure a constant volume of aggregate per square meter yard of treatment.

QUANTITIES (PER SQUARE METER YARD) [FOR SINGLE SURFACE TREATMENT]		
Gradation No.	Bituminous Material (Liter) (Gallons)	Aggregate (kg) (Pounds)
1	1.36-2.040.30-0.45	19-2735-50
2	0.68-1.360.15-0.30	11-1920-35
3	0.45-0.910.10-0.20	8-1415-25

QUANTITIES (PER SQUARE METER YARD) [FOR DOUBLE SURFACE TREATMENT]				
Gradation No.	Bituminous Material (Liter) (Gallons) First Application	Aggregate (kg) (Pounds) First Spreading	Bituminous Material (Liter) (Gallons) Second Application	Aggregate (kg) (Pounds) Second Spreading
1	0.91-1.36 0.20-0.30	15-1828-34	--	--
2	--	--	0.91-1.36 0.20-0.30	11-1420-25
3	0.68-0.91 0.15-0.20	11-1420-25	--	--
4	--	--	0.68-0.91 0.15-0.20	5-810-15

## 2.2.2 Bituminous Materials

\*\*\*\*\*

NOTE: In some states and localities, the use of cutback asphalt is prohibited or curtailed by local air pollution regulations. In areas where cutback asphalt is restricted by air pollution regulations, asphalt cement or emulsified asphalt should be used. Tar should generally be used only where the surface course of the pavement is of tar concrete. Tar grades are listed in order of preference for most normal applications. RC-800 is most commonly recommended for surface treatments. Where cooler temperatures are anticipated, use of RC-250 may be desirable. The type of cutback or emulsion to be used will depend on local conditions and temperature; and these factors must be carefully considered in making the selection for surface treatments. Where cooler temperatures are anticipated, preference should be given to the use of 200-300 grade asphalt cement.

\*\*\*\*\*

#### 2.2.2.1 Cutback Asphalt

Rapid curing cutback asphalt shall conform to ASTM D2028/D2028M, Designation [RC-250] [RC-800] [RC-3000]. Submit temperature-viscosity relationship of cutback asphalt.

#### 2.2.2.2 Emulsified Asphalt

Rapid-setting emulsified asphalt shall conform to ASTM D977, Grade RS-1 or RS-2 or ASTM D2397/D2397M, Grade CRS-1 or CRS-2.

#### 2.2.2.3 Asphalt Cement

Asphalt cement shall conform to ASTM D946/D946M, Penetration Grade [120-150] [200-300] or ASTM D3381/D3381M, Viscosity Grade [AC-2.5] [AC-5] [AC-10] [AC-20] [AR2000]. Submit temperature-viscosity relationship of asphalt cement.

### PART 3 EXECUTION

#### 3.1 SURFACE PREPARATION

Immediately before applying the first course of bituminous material, clean the surface of loose material with power brooms or power blowers. Take care to remove all dirt, clay, and other loose or foreign matter. Flush the surface with water, when necessary to achieve a clean surface, only when directed by the Contracting Officer; allow the surface to dry after flushing.

#### 3.2 APPLICATION OF FIRST COURSE

##### 3.2.1 Bituminous Material

\*\*\*\*\*  
NOTE: Application temperatures will vary with the grade of asphalt or tar used. Recommended materials and application temperatures may be found in paragraph APPLICATION TEMPERATURE OF MATERIALS, below and in Asphalt Institute Publications: Asphalt Surface Treatments - Specifications (publication No. ES-11) and Asphalt Surface Treatments - Construction Techniques (publication No. ES-12).  
\*\*\*\*\*

Apply bituminous material by means of a bituminous distributor at the temperature specified in paragraph APPLICATION TEMPERATURE OF MATERIALS, below or as directed; and within the limits specified in paragraph QUANTITY LIMITS in PART 1. Apply bituminous material in such a manner that uniform distribution is obtained over all surfaces treated. Unless the distributor is equipped to obtain a satisfactory result at the junction of previous and subsequent applications, building paper shall be spread on the surface for a sufficient distance back from the ends of each application so that flow through the sprays may be started and stopped on the paper in order that all sprays will operate at full force on the surface treated. Immediately after application, remove and destroy the building paper. Areas inaccessible to the distributor shall be properly treated with bituminous material using the hose attachment. Protect adjacent buildings, structures, and trees to prevent their being spattered

or marred.

### 3.2.2 Spreading of Aggregate

Immediately following application of bituminous material, spread aggregate uniformly over the surface within the limits of the quantities specified in paragraph QUANTITY LIMITS in PART 1. Spreading shall be done with mechanical spreaders. Spread aggregate evenly by hand on all areas missed by the mechanical spreader. Equipment spreading aggregate shall be operated backwards, so that the bituminous material will be covered ahead of the truck wheels. When hand spreading is employed on inaccessible areas, spread aggregate directly from trucks. Additional aggregate shall be spread by hand over areas having insufficient cover, and spreading shall continue during these operations when necessary.

### 3.2.3 Brooming and Rolling

Roll the surface with a pneumatic-tired and a steel-wheeled roller after sufficient aggregate is spread. Continue rolling until no more aggregate can be worked into the treated surface. The use of the steel-wheeled roller will be discontinued, or a lighter weight steel wheel roller substituted, as directed, if the roller being used causes excessive crushing and shattering of the aggregate. If the aggregate is not distributed properly, broom the surface as soon as possible after the first coverage by the roller, but not until the surface has set sufficiently to prevent excessive marking. Brooming, rolling, and supplemental spreading of aggregate shall continue until the surface is cured and rolled sufficiently to key and set the aggregate. In places not accessible to rollers, compact the aggregate with pneumatic tampers. Aggregate that becomes contaminated with foreign matter shall be removed, replaced with clean aggregate, and rerolled, as directed. Maintain and protect the treated areas by use of barricades for a period not to exceed 30 days.

## 3.3 APPLICATION OF SECOND COURSE

### 3.3.1 Bituminous Treatment

Apply the bituminous material for the second course within 48 hours after construction of the first course, weather permitting. Remove excess aggregate prior to the second application of bituminous material. If the treated surface is excessively moistened by rain, allow the surface to dry for such time as deemed necessary. Perform the second application of bituminous material in the manner specified in paragraph APPLICATION OF FIRST COURSE, including temperature and QUANTITY LIMITS.

### 3.3.2 Aggregate

Immediately following the second application of bitumen, aggregate conforming to the gradation and limits specified in paragraph QUANTITY LIMITS shall be spread uniformly over the bituminous material and processed in the manner specified for the first course.

### 3.3.3 Brooming and Rolling Second Course

The surface shall be rolled and broomed in the manner specified for the first course until a thoroughly bonded, smooth, even-textured surface is produced. Sweep off the surface surplus aggregate and remove it prior to final acceptance.

### 3.4 APPLICATION TEMPERATURE OF MATERIALS

#### 3.4.1 Cutback Asphalt

Use Saybolt Furol as necessary to provide an application viscosity between 0.00004 and 0.00012 square meter per second 40 and 120 centistokes, kinematic or 20 and 60 seconds.

#### 3.4.2 Emulsified Asphalt

Within the following ranges:

RS-1: 21.1-60 degrees C 70-140 degrees F.

RS-2, CRS-1 and CSR-2: 51.7-85 degrees C 125-185 degrees F.

#### 3.4.3 Asphalt Cement

Use Saybolt Furol as necessary to provide an application viscosity between 0.00004 and 0.00012 square meter per second 40 and 120 centistokes, kinematic or 20 and 60 seconds.

### 3.5 TRIAL APPLICATION

\*\*\*\*\*  
**NOTE: This paragraph will be deleted if project  
size does not warrant trial application.**  
\*\*\*\*\*

Preliminary to providing a complete surface treatment, treat [three] [\_\_\_\_\_] lengths of at least 30.5 m 100 feet each for the full width of the distributor bar. Use the appropriate typical application rates specified herein for one surface treatment trial. Make other surface treatment trials using various amounts of materials as may be deemed necessary.

### 3.6 PROTECTION

Keep all traffic off surfaces freshly treated with bituminous material. Provide sufficient warning signs and barricades so that traffic will not travel over freshly treated surfaces. Protect the treated areas from traffic for at least 24 hours after final application of bituminous material and aggregate, or for such time as necessary to prevent picking up. Immediately prior to opening to traffic, roll the entire treated area with a self-propelled pneumatic-tired roller.

-- End of Section --
