SECTION 02 81 00

TRANSPORTATION AND DISPOSAL OF HAZARDOUS MATERIALS 08/25

NOTE: This guide specification covers the requirements for transportation and disposal of hazardous material.

Adhere to <https://www.wbdg.org/dod/ufc/ufc-1-300-02>
Unified Facilities Guide Specifications (UFGS)
Format Standard when editing this guide
specification or preparing new project specification
sections. Edit this guide specification for project
specific requirements by adding, deleting, or
revising text. For bracketed items, choose
applicable item(s) or insert appropriate information.

Remove information and requirements not required in
respective project, whether or not brackets are
present.

Comments, suggestions and recommended changes for
this guide specification are welcome and should be
submitted as a [Criteria Change Request \(CCR\)](#).

PART 1 GENERAL

NOTE: This specification was developed for large
management contracts where there is a technical
evaluation in the selection process. For small
purchases, portions of this specification may be
applicable, but should be closely considered. This
specification should be used in conjunction with the
separate asbestos and PCB management specifications
when work involves these hazardous materials.

For other than remedial action, corrective action,
or disposal of ammunition contract, add DFAR clause
252.223.-7005

If work does not involve hazardous wastes, submittals regarding the hazardous waste management plan, the EPA Biennial and State Annual Reports, exceptions reports, and records of inspection may be removed by the designer.

If work does not involve hazardous wastes, PCB waste, or asbestos containing waste, certificates of disposal may be removed by the designer.

Regarding pre-established spill reporting procedures, the designer should consult, Subject: Spill Reporting Procedure for USACE Hazardous, Toxic, and Radioactive Waste projects EP 200-1-23 (2025).

Security planning requirements (49 CFR 172) IATA DGR Section 1.7.4 and IMDG DGR Sections 1.4 and 1.5, contain responsibilities for both the offeror of the hazardous material as well as the transporter. A security plan is only required for hazardous materials classified as dangerous under 49 CFR 172 Subpart I. Thus both the Government and Contractor have responsibilities for security planning that should be coordinated in the development of specific contract specifications. Implementation guidance is under development. The Government will NOT request development of, review, or approve the Contractors' security plans. This is a legal requirement placed upon hazmat employers and transporters by DOT. The Government will require the Contractor to certify to the Government that either a security plan is in place or to document exemption from the security plan requirement. In developing this specification, Designers should determine whether this specification requires modification to address Agency specific requirements for pre-transportation security requirements in addition to transportation related security requirements.

The Army/USACE will develop a security plan as the offeror of HAZMAT when shipping via a private carrier or contractor.

Regarding security plan certifications, for USACE the intent is to obtain a Contractor certification for pre-transportation activities as well as a separate certification from the initial transporter. Other agencies may take a different approach to implementing security planning requirements and specification should be modified accordingly.

USACE projects require certificates of disposal for all hazardous waste, CERCLA remediation wastes, PCBs, radionuclide containing waste, and asbestos as per Engineering Pamphlet 415-1-266.

1.1 REFERENCES

NOTE: This paragraph is used to list the publications cited in the text of the guide specification. The publications are referred to in the text by basic designation only and listed in this paragraph by organization, designation, date, and title.

Use the Reference Wizard's Check Reference feature when you add a Reference Identifier (RID) outside of the Section's Reference Article to automatically place the reference in the Reference Article. Also use the Reference Wizard's Check Reference feature to update the issue dates.

References not used in the text will automatically be deleted from this section of the project specification when you choose to reconcile references in the publish print process.

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

1.2 DEFINITIONS

1.2.1 Hazardous Material

A substance or material which has been determined by the Secretary of Transportation to be capable of posing an unreasonable risk to health, safety, and property when transported in commerce, and which has been so designated pursuant to the Hazardous Materials Transportation Act, 49 U.S.C. Appendix Section 5101 et seq. The term includes materials designated as hazardous materials under the provisions of 49 CFR 172, Sections .101 and .102 and materials which meet the defining criteria for hazard classes and divisions in 49 CFR 173. EPA designated hazardous wastes are also hazardous materials.

1.2.2 Hazardous Waste

A waste which meets criteria established in Resource Conservation and Recovery Act (RCRA) or specified by the EPA in 40 CFR 261 or which has been designated as hazardous by a RCRA authorized state program.

1.3 SUBMITTALS

NOTE: Review submittal description (SD) definitions in Section 01 33 00 SUBMITTAL PROCEDURES and edit the following list, and corresponding submittal items in the text, to reflect only the submittals required for the project. The Guide Specification technical editors have classified those items that require Government approval, due to their complexity or criticality, with a "G." Generally, other submittal items can be reviewed by the Contractor's Quality Control System. Only add a "G" to an item, if the submittal is sufficiently important or complex in context of the project.

For Army projects, fill in the empty brackets following the "G" classification, with a code of up to three characters to indicate the approving authority. Codes for Army projects using the Resident Management System (RMS) are: "AE" for Architect-Engineer; "DO" for District Office (Engineering Division or other organization in the District Office); "AO" for Area Office; "RO" for Resident Office; and "PO" for Project Office. Codes following the "G" typically are not used for Navy and Air Force projects.

The "S" classification indicates submittals required as proof of compliance for sustainability Guiding Principles Validation or Third Party Certification and as described in Section 01 33 00 SUBMITTAL PROCEDURES.

Government approval is required for submittals with a "G" or "S" classification. Submittals not having a "G" or "S" classification are for

Contractor Quality Control approval. Submittals not having a "G" or "S" classification are for information only. When used, a code following the "G" classification identifies the office that will review the submittal for the Government. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-03 Product Data

Packaging Notifications

Hazardous Waste Management Plan; G, [_____]

Onsite Hazardous Waste Management; G, [_____]

Notices of Non-Compliance and Notices of Violation

Certificates of Disposal

Waste Minimization

1.4 QUALITY ASSURANCE

1.4.1 Transportation and Disposal Coordinator

Designate, by position and title, one person to act as the Transportation and Disposal Coordinator (TDC) for this contract. The TDC serves as the single point of contact for all environmental regulatory matters and has overall responsibility for total environmental compliance at the site including, but not limited to, accurate identification and classification of hazardous waste and hazardous materials; determination of proper shipping names; identification of marking, labeling, packaging and placarding requirements; completion of waste profiles, hazardous waste manifests, asbestos waste shipment records, PCB manifests, bill of lading, exception and discrepancy reports; and all other environmental documentation in security of hazardous waste and hazardous materials. The TDC must have, at a minimum, one year of specialized experience in the management and transportation of hazardous waste and have been Department of Transportation certified under 49 CFR 172, Subpart H, [and IATA Certification for shipments via air][and IMDG Certification for shipments

via vessel].

1.4.2 Training

Hazardous materials/waste employees must be trained, tested, and certified to safely and effectively carry out their assigned duties in accordance with [Section 01 35 29.13 HEALTH, SAFETY, AND EMERGENCY RESPONSE PROCEDURES FOR CONTAMINATED SITES][_____]. Employees transporting hazardous materials or preparing hazardous materials for transportation, including samples, must be trained, tested, and certified in accordance with 49 CFR 172, Subpart H, including security awareness and any applicable security plans. Hazardous material employees must also be trained in accordance with IATA DGR when shipping hazardous materials by air and IMDG DGR when shipping hazardous materials by water. Employees must be trained, tested, and certified in accordance with 49 CFR 172, Subpart H to determine that shipments do not constitute DOT regulated hazardous materials.[Provide certifications for training in accordance with requirements provided in DOT 4500.9R.]

1.4.3 Pipeline Hazardous Materials Safety Administration Certification

The hazardous materials transporter and offeror must possess a current certificate of registration issued by the Pipeline Hazardous Materials Safety Administration, when required by 49 CFR 107, Subpart G and unless an exemption applies. Submit copies of the certificates or written statements certifying exemption from these requirements.

1.4.4 Laws and Regulations Requirements

Comply with Federal, state, and local laws and regulations which are applicable. These requirements are amended frequently and compliance with amendments is required as they become effective. Notify the Contracting Officer immediately if compliance exceeds the scope of work or conflicts with specific requirements of the contract.

PART 2 PRODUCTS

NOTE: For US Army Corps of Engineer (USACE)
Projects involving shipments containing radioactive
nuclides, additional products such as special
marking may apply. See USACE Engineering Pamphlet
415-1-266, Section 7, Resident Engineer Management
Guide for Hazardous, Toxic, and Radioactive Waste
Projects and Engineering Manual 1110-35-1,
Management Guidelines for Working with Radioactive
and Mixed Waste.

2.1 MATERIALS

Provide all the materials required for the packaging, labeling, marking, placarding and transportation of hazardous wastes and hazardous materials in conformance with Department of Transportation standards[and][IATA DGR][and][IMDG DGR][and][EP 415-1-266][and][_____]. Details in this specification must not be construed as establishing the limits of the Contractor's responsibility.

2.1.1 Packagings

Provide [bulk][non-bulk][bulk and non-bulk] containers for packaging hazardous materials/wastes consistent with the authorizations referenced in the Hazardous Materials Table in 49 CFR 172, Section 101, Column 8. Bulk and non-bulk packaging must meet the corresponding specifications in 49 CFR 173 referenced in the Hazardous Materials Table, 49 CFR 172, Section 101. Packaging must conform to the general packaging requirements of Subpart B of 49 CFR 173, to the requirements of 49 CFR 178 at the specified packing group performance level, to the requirements of special provisions of column 7 of the Hazardous Materials Table in 49 CFR 172, Section 101, and be compatible with the material to be packaged as required by 49 CFR 173. Also provide other packaging related materials such as materials used to cushion or fill voids in overpacked containers. The hazardous materials being packaged must not react dangerously with, decompose or ignite the sorbent packaging materials. Additionally, sorbents used to treat free liquids to be disposed of in landfills must be non-biodegradable as specified in 40 CFR 264, Section 314. In addition, packaging notifications must be provided to the Government in accordance with 49 CFR 172, Section 178.2(c) regarding type and dimensions of closures, including gaskets, needed to satisfy performance test requirements.

[Provide transport of [bulk][non-bulk][bulk and non-bulk] containers aboard rail consistent with additional requirements contained in 49 CFR 174. Provide railcar tanks consistent with additional requirements contained in 49 CFR 179.][Provide transport of [bulk][non-bulk][bulk and non-bulk] containers aboard aircraft consistent with additional requirements contained in 49 CFR 175[and] packing, marking and labelling requirements consistent to requirements of IATA DGR Section 5.][Provide [bulk][non-bulk][bulk and non-bulk] containers aboard vessels consistent with additional requirements contained in 49 CFR 176[and] packaging marking and labelling requirements consistent with requirements of IMDG DGR Part 4 Chapter 4.]

2.1.2 Markings

Provide markings for each hazardous material/waste package, freight container, and transport vehicle consistent with the requirements of 49 CFR 172, Subpart D and [40 CFR 262, Section 32 (for hazardous waste)] [49 CFR 174 (for transport by rail), 49 CFR 175 (for transport by aircraft) and IATA DGR Section 7], [49 CFR 176 for transport by vessel and IMDG DGR Part 5, Chapters 5.2][40 CFR 761, Section 45 (for PCBs)][40 CFR 61, Section 149(d) (for asbestos)][EP 415-1-266 (for FUSRAP radionuclides)]. Markings must withstand a 180 day exposure to conditions reasonably expected to be encountered during container storage and transportation, without deterioration or substantial color change.

2.1.3 Labeling

Provide primary and subsidiary labels for hazardous materials/wastes consistent with the requirements in the Hazardous Materials Table in 49 CFR 172, Section 101, Column 6. Provide labels meeting design specifications required by 49 CFR 172, Subpart E including size, shape, color, printing, and symbol requirements.[Labeling must meet 49 CFR 175 (for transport by aircraft) and IATA DGR Section 7], [49 CFR 176 for transport by vessel and IMDG DGR Section 5.3.] Labels must be durable weather resistant and withstanding a 180 day exposure to conditions reasonably expected to be encountered during container storage and

transportation, without deterioration or substantial color change.

2.1.4 Placards

For each offsite shipment of hazardous material/waste, provide primary and subsidiary placards consistent with the requirements of 49 CFR 172, Subpart F[and IMDG DGR Section 5.3]. Provide placards for each side and each end of bulk packaging, freight containers, transport vehicles, and rail cars requiring such placarding. Placards may be plastic, metal, or other material capable of withstanding, without deterioration, a 30 day exposure to open weather conditions and must meet design requirements specified in 49 CFR 172, Subpart F[and IMDG DGR Section 5.3].

2.1.5 Spill Response Materials

Provide spill response materials including, but not limited to, containers, adsorbent, shovels, and personal protective equipment. Spill response materials must be available at all times when hazardous materials/wastes are being handled or transported, must be compatible with the type of material being handled, and must include a sufficient volume of materials to contain the contents of the spill.

2.2 EQUIPMENT AND TOOLS

Provide appropriate equipment and tools necessary to handle hazardous materials and hazardous wastes in a safe and environmentally sound manner.

PART 3 EXECUTION

3.1 HAZARDOUS WASTE MANAGEMENT PLAN

Prepare a Hazardous Waste Management Plan detailing the manner in which hazardous wastes must be managed and describing the types and volumes of hazardous wastes anticipated to be managed. The Hazardous Waste Management Plan must be consistent with identified environmental controls described in 01 57 19 TEMPORARY ENVIRONMENTAL CONTROLS and 01 74 19 CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL. Address both onsite and offsite hazardous waste management. Describe the methods to be used to ensure accurate piece counts or weights of shipments; describe waste minimization methods; identify and describe facilities to be used for treatment, storage, and disposal (TSD); identify areas onsite where hazardous wastes are to be handled; and identify whether transfer facilities are to be used; and if so, how the wastes must be tracked to ultimate disposal. Submit the plan to the Contracting Officer for approval prior to start of work. Provide waste inspections as required by federal, state and local hazardous waste regulations. Submit written documentation of weekly hazardous waste inspections on a [monthly][quarterly][_____] basis.

3.2 ONSITE HAZARDOUS WASTE MANAGEMENT

NOTE: When work on a site is being performed pursuant to the authorities of CERCLA, it may be eligible for the permit waiver of CERCLA Section 121(e) such that accumulation time restrictions or other requirements may not be applicable. In that case the designer, with assistance from agency counsel as necessary, should determine whether this

paragraph requires revision accordingly.

Coordinate the onsite management of all hazardous materials and waste with the installation environmental function and the Contracting Officer. These paragraphs apply to Government owned waste only. Ensure compliance with Federal, state, and local hazardous waste laws and regulations and verifying those requirements when preparing reports, waste shipment records, hazardous waste manifests, or other documents. Identify hazardous wastes using criteria set forth in 40 CFR 261 or applicable state and local laws, regulations, and ordinances. Comply with generator requirements in [40 CFR 262][and][applicable state or local law or regulations] when accumulating hazardous waste onsite. Separate hazardous or otherwise regulated wastes from materials that are eligible for recycling or reclamation to the greatest extent practicable in accordance with Section 01 74 19 CONSTRUCTION WASTE MANGEMENT AND DISPOSAL.

Restrict onsite accumulation times to applicable time frames referenced in [40 CFR 262, Section 16, 17 and 18 based upon waste generator status][and][applicable state or local law or regulation]. Accumulation start dates commence when waste is placed into the container, unless accumulating in a Satellite Accumulation Area (SAA); then requirements of 40 CFR 262, Section 15 and state and local regulations must be followed. For waste accumulated in an SAA, the accumulation start date commences when the container exceeds the SAA volume limits and is moved to a Central Accumulation Area. Only use containers in good condition and compatible with the waste to be stored. Ensure containers are closed except when adding or removing waste, or temporary venting is necessary to support equipment operation or prevent hazardous pressure buildup. Immediately mark all hazardous waste containers with the words "hazardous waste" and other information required by [40 CFR 262, Section 32][and][applicable state or local law or regulation] as soon as the waste is containerized. Place additional markings on containers of "unknowns" designating the date sampled, and the suspected hazard. Inspect containers for signs of deterioration and for responding to any spills or leaks. Inspect all hazardous waste areas weekly and provide written documentation of the inspection. [For hazardous waste tank systems, perform daily inspections in accordance with 40 CFR 265 and provide written documentation of the inspections.] Include date and time of inspection, name of individual conducting the inspection, problems noted, and corrective actions taken on the inspection logs.

3.2.1 Hazardous Waste Classification

NOTE: If insufficient information exists to make a waste classification determination, the designer should develop contract clauses to provide for additional analysis.

Identify, in consultation with the [Contracting Officer][waste generator][____], all federal and state waste codes applicable to each hazardous waste stream based on requirements in 40 CFR 261 or applicable state or local law or regulation. Also identify applicable treatment standards in 40 CFR 268 and land disposal restrictions and make a determination as to whether or not the waste meets or exceeds the standards. Submit waste profiles, analyses, classification and treatment standards information to Contracting Officer [waste generator] for review

and approval.

3.2.2 Packaging, Labeling, and Marking

Package, label, and mark hazardous materials/wastes using the specified materials and in accordance with the referenced authorizations. Mark each container of hazardous waste of 416 L 110 gallons or less with the following:

"HAZARDOUS WASTE - Federal Law Prohibits Improper Disposal.
If found, contact the nearest police or public safety authority or the U.S. Environmental Protection Agency.

- 1) Generator's name: _____
- 2) Manifest Document Number (or applicable labels required by RCRA authorized state programs): _____".
- 3) RCRA characterization (toxic, reactive, corrosive, ignitable): _____
- 4) DOT shipping name and Emergency Response Guide (ERG)#: _____

3.3 OFFSITE HAZARDOUS WASTE MANAGEMENT

NOTE: For US Army Corps of Engineer (USACE)
Projects involving shipments containing radioactive nuclides, additional management requirements may apply. Designers should refer to USACE EP 415-1-266, Section 7, Resident Engineer Management Guide for Hazardous, Toxic, and Radioactive Waste Projects and EM 1110-35-1, Management Guidelines for Working with Radioactive and Mixed Waste. For example, a pink mark stating "Warning: Empty only at (destination)" is required.

Designers should review new manifest requirements as they become available to ensure this specification remains consistency with regulatory changes.

Coordinate the off-site transfer of all hazardous materials and waste with the installation environmental function and the Contracting Officer. Use RCRA Subtitle C permitted facilities which meet the requirements of 40 CFR 264 or facilities operating under interim status which meet the requirements of 40 CFR 265 or 40 CFR 300 Section 440 for CERCLA sites. Do not use offsite treatment, storage, and disposal facilities with significant RCRA violations or compliance problems (such as facilities known to be releasing hazardous constituents into ground water, surface water, soil, or air). Submit Notices of Non-Compliance and Notices of Violation by a Federal, state, or local regulatory agency issued to the Contractor in relation to any work performed under this contract. Immediately provide copies of such notices to the Contracting Officer. Also furnish relevant documents regarding the incident and any information requested by the Contracting Officer, and coordinate its response to the notice with the Contracting Officer or the designated representative prior to submission to the notifying authority. Also furnish a copy to the Contracting Officer of all documents submitted to the regulatory authority, including the final reply to the notice, and all other materials, until the matter is resolved.

3.3.1 Treatment, Storage, and Disposal Facility and Transporter

Provide the Contracting Officer with EPA ID numbers, names, locations, and telephone numbers of TSD facilities and transporters. This information must be contained in the Hazardous Waste Management Plan and be approved by the Contracting Officer prior to waste disposal.

3.3.2 Facility Status Information

Facilities receiving hazardous waste must be permitted in accordance with 40 CFR 270 or operating under interim status in accordance with 40 CFR 265 requirements, or permitted by a state authorized by the Environmental Protection Agency to administer the RCRA permit program. [Additionally, for waste generated at CERCLA sites, prior to using a TSD Facility, contact the EPA Regional Offsite Coordinator in accordance with 40 CFR 300, Section 440, to determine the facility's status, and document all information necessary to satisfy the requirements of the EPA Offsite policy and submit this information to the Contracting Officer in the Hazardous Waste Management Plan.]

3.3.3 Shipping Documents and Packagings Certification

Prior to shipment of any hazardous material offsite and a minimum of [14][_____] days prior to anticipated pickup, provide for review written certification to the Contracting Officer that hazardous materials have been properly packaged, labeled, and marked in accordance with Department of Transportation[, IATA][, IMDG,] and EPA or authorized state requirements. Furnish designated receiving facility packaging assurances not later than 35 days after acceptance of the shipment. The Contractor's TDC must also provide written certification regarding waste minimization efforts documenting that efforts have been taken to reduce the volume and toxicity of waste to the degree economically practicable and that the method of treatment, storage, or disposal selected minimizes threats to human health and the environment.

3.3.4 Transportation

NOTE: When the additional cost of sending a qualified government representative to a remote location to sign a manifest for a small clean up project is unwarranted, the option of requiring the onsite Contractor to sign the manifests on behalf of the generator is permitted and should be considered. This option may only be exercised on a project specific basis, if prior to the solicitation process, written authorization of the customer and approval of the Chief, Construction Division at the executing district has been obtained, and the technical provisions of the contract solicitation provide competing Contractors notice of the requirement.

Prior to conducting hazardous materials activities, the Contractor responsible for pre-transportation activities must either certify to the Government that a Security Plan is in place which meets the requirements of 49 CFR 172, Subpart I [IATA DGR Section 1.7][IMDG DGR Section 1.4] or

in the event that the types or amounts of hazardous materials are excluded from the security planning requirements, a written statement to that effect detailing the basis for the exception. Use Uniform Hazardous Waste manifests for transporting hazardous wastes as required by 40 CFR 263 or applicable state or local law or regulation. Transportation must comply with all requirements in the Department of Transportation referenced regulations in the 49 CFR series. Prepare uniform hazardous waste manifests for each shipment of hazardous waste shipped offsite. Complete manifests using instructions in 40 CFR 262, Subpart B and applicable state or local law or regulation. Submit manifests and waste profiles to Contracting Officer for review and approval. Prepare land disposal restriction notifications as required by 40 CFR 268 for each shipment of hazardous waste. Submit notifications with the manifest to the Contracting Officer for review and approval. [In accordance with DOT 4500.9R, inspect motor vehicles used to transport hazardous materials in accordance the 49 CFR and DOT safety regulations and complete DDForm 626, Motor Vehicle Inspection][_____].

3.3.5 Treatment and Disposal of Hazardous Wastes

Coordinate any off site shipments of hazardous materials or hazardous wastes with the installation environmental function. Initial, or satellite hazardous waste accumulation is limited to 55 gallons (or 1 quart of acutely hazardous waste). Once a waste stream exceeds 55 gallons, it must be transferred to an on-site 90 day (180 day small quantity generator) accumulation area, or 270 days if the designated disposal facility is more than 200 miles away, or a permitted hazardous waste treatment, storage or disposal facility within three days. Ship hazardous wastes only to facilities which are properly permitted to accept the hazardous waste or operating under interim status. Ensure wastes are treated to meet land disposal treatment standards in 40 CFR 268 prior to land disposal. Propose TSD facilities via submission of the Hazardous Waste Management Plan, subject to the approval of the Contracting Officer. Submit Certificates of Disposal documenting the ultimate disposal, destruction or placement of [hazardous wastes,] [CERCLA remediation waste,] [polychlorinated biphenyls (PCBs),] [_____] and [asbestos] within [180][_____] days of initial shipment. Receipt of these certificates are required for final payment.

3.4 RADIOACTIVE MATERIALS MANAGEMENT

NOTE: For US Army Corps of Engineer (USACE)
Projects involving shipments containing radioactive
nuclides, additional management requirements may
apply. Designers should refer to USACE EP
415-1-266, Chapter 7, Resident Engineer Management
Guide for Hazardous, Toxic, and Radioactive Waste
Projects and EM 1110-35-1, Management Guidelines for
Working with Radioactive and Mixed Waste. For
example, a pink mark stating "Warning: Empty only at
(destination)" is required.

Consult with the [Contracting Officer][generator][_____], to evaluate, prior to shipment of any material offsite, whether the material is regulated as a hazardous waste or a DOT hazardous material in addition to being regulated as a radioactive material. Management of radioactive materials/wastes must comply with Nuclear Regulatory Commission (NRC),

DOT, and federal and state regulations governing management and transport. Perform the evaluation to determine proper shipping descriptions, marking requirements, and other criteria, as described below.

3.4.1 Identification of Proper Shipping Names

Use 49 CFR 172, Section .101 to identify proper shipping names for each hazardous material (including hazardous wastes and radioactive materials) to be shipped offsite. Submit proper shipping names to the Contracting Officer in the form of draft shipping documents for review and approval.

3.4.2 Packaging, Labeling, and Marking

Packaging, labeling and marking of radioactive materials must be in accordance with 49 CFR 172, and all nuclear regulatory commission (NRC) requirements and all state and local regulations.

3.4.3 Shipping Documents

Ensure that each shipment of radioactive and hazardous materials sent offsite is accompanied by properly completed shipping documents. This includes shipments of samples that may potentially meet the definition of a Department of Transportation regulated hazardous material.

3.4.3.1 Other Hazardous Material Shipment Documents

NOTE: The designer should determine whether bill of lading certifications will be signed by the Government or the Contractor. This determination should be based on whether the Government or the Contractor is responsible for classifying, packaging, marking, labeling, and placarding the shipment.

Prepare a bill of lading [or] [dangerous goods declaration for air shipments] for each shipment of hazardous material which is not a regulated hazardous waste requiring a hazardous waste manifest which fulfills the shipping paper requirements. Satisfy the requirements of 49 CFR 172, Subpart C, [and 40 CFR 279 if shipping used oil] and applicable state or local law or regulation, and submit to the Contracting Officer for review and approval. For laboratory samples and treatability study samples, prepare bills of lading or dangerous goods declaration and other documentation as necessary to satisfy conditions of the sample exclusions in 40 CFR 261, Section 4(d) and (e) and any applicable state or local law or regulation. Bill of ladings or dangerous goods declarations requiring shipper's certifications must be signed by the [Government][Contractor].

3.5 SPECIAL REQUIREMENTS FOR ASBESTOS WASTES

NOTE: If work involves asbestos containing wastes, designer should determine whether reference to a separate asbestos specification should be added.

If work involves asbestos containing wastes, manage these wastes in

accordance with specification Section 02 82 00 ASBESTOS REMEDIATION.

3.5.1 Asbestos Waste Shipment Documents

Prepare waste shipment records, as required by 40 CFR 61, for shipments of asbestos. Submit waste shipment records to the Contracting Officer for review and approval.

3.6 PCB WASTE SHIPMENT DOCUMENTS

Prepare hazardous waste manifests for each shipment of PCB waste shipped offsite. Complete manifests using instructions in 40 CFR 761, Sections 207 and 208 and other applicable requirements. Submit documents to Contracting Officer for review and approval.

3.7 WASTE MINIMIZATION

Minimize the generation of hazardous waste to the maximum extent practicable and take all necessary precautions to avoid mixing clean and contaminated wastes. Identify and evaluate recycling and reclamation options as alternatives to land disposal. Requirements of 40 CFR 266 apply to: hazardous wastes recycled in a manner constituting disposal; hazardous waste burned for energy recovery; lead-acid battery recycling; and hazardous wastes with economically recoverable precious metals. Submit written certification that waste minimization efforts have been undertaken to reduce the volume and toxicity of waste to the degree economically practicable and that the method of treatment, storage, or disposal selected minimizes threats to human health and the environment. Exclude hazardous waste (whether recycled, reclaimed, or sent to landfill) from waste reduction calculations in accordance with Section 01 74 19 CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL.

3.8 RECORDKEEPING

Maintain adequate records to support information provided to the Contracting Officer regarding exception reports, annual reports, and biennial reports; maintain hazardous waste, PCB waste and asbestos waste shipment records for a minimum of 3 years from the date of shipment or any longer period required by applicable law or regulation or other provision of this contract; and maintain bill of lading for a minimum of 2 years from the date of shipment or longer period required by applicable law or regulation or other provision of this contract. Submit information necessary to file state annual or EPA biennial reports for hazardous waste transported, treated, stored, or disposed of under this contract and in accordance with federal and state regulatory requirements. Do not forward these data directly to the regulatory agency but to the Contracting Officer at the specified time. Submit the information necessary for filing of the formal reports in the form and format required by the governing Federal or state regulatory agency. A cover letter must accompany the data to include the contract number, Contractor name, and project location. In the event that a manifest copy documenting receipt of hazardous waste at the treatment storage and disposal facility is not received within 45 to 60 days of shipment initiation based on the generator status, or that a manifest copy documenting receipt of PCB waste at the designated facility is not received within 35 days of shipment initiation, prepare and submit an exception report to the Contracting Officer within 60 days of shipment initiation. Exception reports must also comply with applicable state regulations.

3.9 SPILL RESPONSE

In the event of a spill or release of a hazardous substance (as designated in 40 CFR 302), or pollutant or contaminant, or oil (as governed by the Oil Pollution Act (OPA), 33 U.S.C. 2701 et seq.), notify the Contracting Officer immediately. Direction from the Contracting Officer concerning a spill or release is not considered a change under the contract. If the spill exceeds a reporting threshold, follow the pre-established procedures for immediate reporting to the Contracting Officer. Comply with applicable requirements of Federal, state, or local laws or regulations regarding any spill incident. Transporters must comply with 49 CFR 171 Section 15 for reporting of spills and releases during transport.[For USACE projects, refer to EP 200-1-23 for spill reporting procedures.]

3.10 EMERGENCY CONTACTS

Comply with the emergency contact provisions in 49 CFR 172, Section 604. When shipping hazardous materials, provide a 24 hr emergency response contact and phone number of a person knowledgeable about the hazardous materials being shipped and who has comprehensive emergency response and incident mitigation information for that material, or has immediate access to a person who possesses such knowledge and information. Monitor the phone on a 24 hour basis at all times when the hazardous materials are in transportation, including during storage incidental to transportation. Ensure that information regarding this emergency contact and phone number are placed on all hazardous material shipping documents. Designate an emergency coordinator and post the following information at areas in which hazardous wastes are managed:

- a. The name of the emergency coordinator.
- b. Phone number through which the emergency coordinator can be contacted on a 24 hour basis.
- c. The telephone number of the local fire department.
- d. The location of fire extinguishers and spill control materials.
