1.2 LUMP SUM PRICE

\*\*\*\*\*

NOTE: If Section 01270A MEASUREMENT AND PAYMENT is included in the project specifications, this paragraph title (LUMP SUM PRICE) should be deleted from this section and the remaining appropriately edited subparagraphs below should be inserted into Section 01270A.

\*\*\*\*\*

1.2.1 Metalwork Fabrication, Machine Work, Miscellaneous Provisions

1.2.1.1 Payment

Payment shall constitute full compensation for furnishing all plant, labor, materials and equipment and performing all operations necessary for the metalwork fabrication, machine work, miscellaneous provisions as specified.

Unit of measure: lump sum.

### 1.3 SUBMITTALS

\*\*\*\*\*

NOTE: Submittals must be limited to those necessary for adequate quality control. The importance of an item in the project should be one of the primary factors in determining if a submittal for the item should be required.

A "G" following a submittal item indicates that the submittal requires Government approval. Some submittals are already marked with a "G". Only delete an existing "G" if the submittal item is not complex and can be reviewed through the Contractor's Quality Control system. Only add a "G" if the submittal is sufficiently important or complex in context of the project.

For submittals requiring Government approval on Army projects, a code of up to three characters within the submittal tags may be used following the "G" designation to indicate the approving authority. Codes for Army projects using the Resident Management System (RMS) are: "AE" for Architect-Engineer; "DO" for District Office (Engineering Division or other organization in the District Office); "AO" for Area Office; "RO" for Resident Office; and "PO" for Project Office. Codes following the "G" typically are not used for Navy projects.

Submittal items not designated with a "G" are considered as being for information only for Army projects and for Contractor Quality Control approval for Navy projects.

\*\*\*\*\*

Government approval is required for submittals with a "G" designation; submittals not having a "G" designation are [for Contractor Quality Control approval.][for information only. When used, a designation following the "G" designation identifies the office that will review the submittal for the Government.] The following shall be submitted in accordance with Section 01330 SUBMITTAL PROCEDURES:

NOTE: Rollers and track plates on gates and in gate slots which are subjected to hydraulic loads from water during operation of gates should be hardened by heat treatment as specified below in subparagraph GATE ROLLERS AND BOLTED TRACK PLATES. Hardened track plates are not suitable for welding and should be bolted in place. Track plates which are lightly loaded, such as gate upstream track plates, should conform to subparagraph WELDED SEAL PLATES AND BARS; WELDED ROLLER GUIDE BARS; AND WELDED TRACK PLATES below and be welded in place.

\*\*\*\*\*

- a. Gate Rollers and Bolted Track Plates - ASTM A 564/A 564M, UNS S17400 or S45000, age-hardened heat treated to obtain a Brinell hardness range of 331 minimum to 401 maximum, hot-finished or cold-finished, Class C. Heat treatment of rollers and plates shall not commence until the heat treatment procedure and the test reports for other required material tests are approved. After heat treating and final machining, each roller and track plate shall be free of scale and cracks, as determined by magnetic particle, florescent, or dye penetrant inspection tests.

(1) Hardness Check Tests - Suitable 13 mm 1/2 inch thick samples of the material from each heat shall be tested to determine the hardness in both the solution-annealed and age-hardened conditions. Where the oven-batch heat-treating process is used, hardness check tests shall be performed on material of each heat in each oven batch. Where a continuous heat-treating process is used, three check tests shall be performed on material of each heat: one on the first material through the process, one at the middle of the run, and one on the last material through the process.

- b. Fasteners for Bolted Track Plates and Guide Bars - Bolting materials shall conform to ASTM A 193/A 193M or ASTM A 320/A 320M,

Class 2, Grade B8 Nuts shall conform to ASTM A 194/A 194M, Grade 8A.

c. Gate Roller Links and Pins

(1) Links - ASTM A 276, UNS S30400 or S41000, Condition A, hot-finished or cold-finished, Class A.

(2) Pins - ASTM A 276, UNS S21800, Condition A, cold-finished or hot-rolled and machine-finished to the tolerances specified in ASTM A 484/A 484M for cold-finished round bars, Class C.

\*\*\*\*\*

NOTE: It is contemplated that the pin diameter and tolerances shown will be the minimum size and tolerances as given in ASTM A 484/A 484M for cold finished round bars. Machined pins should have a surface roughness of not exceeding 1.6 micrometers (63 microinches). Minimum diameter of holes in bars shall be the maximum pin size plus an allowance of 0.2 mm (0.008 inch) for a free fit. Minimum diameter of holes in rollers should be the nominal diameter of the pin plus 1 mm (1/32 inch). The length of the pin between retainer ring grooves should be based on the maximum width of the roller, the maximum thickness of the hot-finished bars rolled to the tolerances given in ASTM A 484/A 484M plus a clearance of approximately 1 mm (0.040 inch) to avoid binding between bars, or binding between bars and rollers.

\*\*\*\*\*

d. Retaining rings for gate roller links shall be corrosion resistant steel conforming to ASME B27.7, BASIC external series type with nominal ring size of [\_\_\_\_\_] mm inches.

e. Seal Plates, Bars, and Retainers; Roller Guide Bars; and Track Plates.

(1) Welded Seal Plates and Bars; Welded Roller Guide Bars; and Welded Track Plates - ASTM A 240/A 240M, UNS [S40500] [S41008] [S30400], Hot-Rolled and Annealed or Heat Treated, and Blast Cleaned or Pickled Finish; or ASTM A 276, UNS S30400, S40500, or S41000 with a maximum carbon content of 0.08 percent, Condition A, Hot-Finished or Cold-Finished, Class C.
