Preparing Activity: NAVFAC Superseding
UFGS-01782 (September 2003)

UNIFIED FACILITIES GUIDE SPECIFICATIONS

References are in agreement with UMRL dated 25 June 2004

Latest change indicated by CHG tags

SECTION 01782

FACILITY OPERATION AND MAINTENANCE SUPPORT INFORMATION 08/04

NOTE: This guide specification covers the requirements for operation and maintenance support information (OMSI).

Comments and suggestions on this guide specification are welcome and should be directed to the technical proponent of the specification. A listing of technical proponents, including their organization designation and telephone number, is on the Internet.

Recommended changes to a UFGS should be submitted as a Criteria Change Request (CCR).

Use of electronic communication is encouraged.

Brackets are used in the text to indicate designer choices or locations where text must be supplied by the designer.

NOTE: Throughout this document the editor is asked to choose between Navy Technical Representative and Contracting Officer. For EFD/EFA's with designated OMSI points-of-contact choose Navy Technical Representative (NTR), otherwise choose Contracting Officer.

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

This section provides the requirements for operation and maintenance support information (OMSI). OMSI contains detailed as-built information describing the efficient, economical and safe operation and maintenance, and repair of the facility. OMSI is provided as hard copy, manuals, .pdf files, and computerized maintenance management system (CMMS) data. The OMSI is to be factual, concise, comprehensive and written to be easily used

by maintenance personnel. Descriptive matter and theory must include technical details that are essential for a comprehensive understanding of the operation, maintenance and repair of the system. The OMSI preparer shall ensure that OMSI reflect changes to systems and equipment, made during construction. The words "system", "systems", and "equipment", when used in this document refer to as-built systems and equipment.

1.1.1 Organization of OMSI

Prepare the OMSI in three parts. PART I - Facility Information, PART II - Primary Systems Information, and PART III - Product Data. Cross-referencing within or between OMSI Parts must be specific.

1.1.2 Sources of Data

The primary sources of data needed to prepare the OMSI include the design plans and specifications, field visits and approved construction submittals. Construction submittals include Operation and Maintenance (O&M) Data, Product Data and Shop Drawings. The Contractor furnishes these submittals. Section 01332N, "Construction Submittal Procedures" lists all submittal requirements and the Specification Section 01781, "Operation and Maintenance Data" specifies in detail the O&M requirements. Remove extraneous information from any design plans included in the OMSI manuals. Exact photocopies of design plans are not acceptable. Manufacturer's catalog data for materials, methods, and systems used in this contract shall be the primary source of information needed to prepare the OMSI.

1.1.3 Metric OMSI

Projects designed with metric units of measurement require metric OMSI. All measurements and units shall be in SI (System International) metric units exclusively.

1.2 REFERENCES

NOTE: Issue (date) of references included in project specifications need not be more current than provided by the latest guide specification. Use of SpecsIntact automated reference checking is recommended for projects based on older guide specifications.

The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

ASTM INTERNATIONAL (ASTM)

ASTM E 1557	Standard Classification for Building Elements and Related Sitework - Uniformat II
-------------	---

1.3 SUBMITTALS

NOTE: Submittals must be limited to those necessary for adequate quality control. The importance of an

item in the project should be one of the primary factors in determining if a submittal for the item should be required.

A "G" following a submittal item indicates that the submittal requires Government approval. Some submittals are already marked with a "G". Only delete an existing "G" if the submittal item is not complex and can be reviewed through the Contractor's Quality Control system. Only add a "G" if the submittal is sufficiently important or complex in context of the project.

For submittals requiring Government approval on Army projects, a code of up to three characters within the submittal tags may be used following the "G" designation to indicate the approving authority. Codes for Army projects using the Resident Management System (RMS) are: "AE" for Architect-Engineer; "DO" for District Office (Engineering Division or other organization in the District Office); "AO" for Area Office; "RO" for Resident Office; and "PO" for Project Office. Codes following the "G" typically are not used for Navy projects.

Submittal items not designated with a "G" are considered as being for information only for Army projects and for Contractor Quality Control approval for Navy projects.

Government approval is required for submittals with a "G" designation; submittals not having a "G" designation are [for Contractor Quality Control approval.] [for information only. When used, a designation following the "G" designation identifies the office that will review the submittal for the Government.] The following shall be submitted in accordance with Section 01330 SUBMITTAL PROCEDURES:

SD-11 Closeout Submittals

OMSI, Preliminary Submittal; G, [_____]

OMSI, 100% - Prefinal Submittal; G, [_____]

OMSI, Final Submittal; G, [_____]

1.4 SUBMITTAL FORMAT

1.4.1 Hard Copies

1.4.1.1 Binders

Bind the OMSI in durable, hard cover, water and grease resistant binders, which hold 8.5" X 11" sheets. Binders shall have clear pockets located on the front and on the spine that hold printed sheets.

- a. Facility Information binder - Bind the PART I, Facility Information in a white, post type, loose leaf binder of appropriate size.

- b. Primary Systems Information binders - Bind the PART II, Primary Systems Information in blue, post type, loose leaf binders of three inch capacity. More than one system may be included in a single binder provided that all sections of each system are included in that binder.
- c. Product Data binders - Bind the PART III, Product Data in red, post type, loose leaf binders of three inch capacity.
- d. Identify each binder on both the cover insert sheet and the spine insert sheet with the following information:
 - (1). OMSI Part I, II or III with appropriate titles
 - (2). Building Number
 - (3). Project Title
 - (4). Activity and Location
 - (5). Construction Contract Number
 - (6). Prepared For: (Contracting Agency)
 - (7). Prepared By
 - (8). Volume Number - Each binder is a single volume. Number each volume consecutively. For example, an OMSI composed of 5 binders would have the Part I, Facility Information binder labeled volume 1 of 5 and the last Part III, Product Data binder would be volume 5 of 5.

1.4.1.2 Pages, Dividers and Tabs

Use high quality paper and dividers of heavy-duty paper with plastic reinforced holes and integrated tabs.

- a. Facility Information divider - Use plain tabs to identify the major items.
- b. Primary Systems Information dividers - Use blue tabs with bold type to identify the system titles. Use dividers with plain tabs to identify the different sections under each system and the major topics under each section.
- c. Product Data dividers - Use plain tabs to show the UNIFORMAT II number and title. Use dividers with colored tabs to identify the specification section number with keywords to identify the section title. Use colored non-tab dividers to separate large equipment groupings such as valves, pumps, chillers and to separate the O&M data within each specification section.

1.4.1.3 Oversized Sheets

Insert oversized sheets into the binders as single foldout sheets. Oversized sheets are defined as submittals, instruction sheets, drawings, etc. larger than 8-1/2" X 11" but not exceeding 11" X 17". Oversized sheets shall be folded to expose the sheet's title block. Submittals or drawings exceeding 11" X 17", which cannot be reduced, may be inserted in labeled, clear plastic pockets.

1.4.1.4 Preface

Insert an unedited copy of the Preface sheet in the front of each volume, following a copy of the cover insert sheet. Include the information shown in the Preface located at the end of this section. No tab sheet is to be

used with the Preface sheet.

1.4.1.5 Table of Contents

Provide a Master Table of Contents for the entire set of OMSI Binders. Place the Master Table of Contents after the Preface sheet of each volume. Provide a specific Table of Contents for Part I, Facility Information, for each system in Part II, Primary Systems Information, and for each division and section of Part III, Product Data.

1.4.2 Electronic Files

Provide narrative information in a Word for Windows(TM) format, unless otherwise specified by the [Navy Technical Representative] [Contracting Officer]. Provide drawings and plans prepared for the OMSI manuals in a CAD format. Name and index the files for ease of identification and update. Provide all files on Compact Disk (CD).

1.4.3 Electronic Format (PDF)

Provide the OMSI on Compact Disk using Adobe Acrobat 5.0 or similar software capable of producing PDF (Portable Document Format) files. The PDF file is duplicate of the hard copy format. Scanned documents shall be scanned at 150 DPI or better. The PDF files shall be indexed by part (Facility Information, Primary Systems Information, and Product Data) and each entry identified in the table of contents. Indexes and Hyperlinks may be hidden or highlighted. Highlighted indexes may only be UNDERLINED or COLOR TEXT.

1.4.4 Computerized Maintenance Management System (CMMS) Data

**NOTE: If OMSI is used to populate data fields
of a CMMS (i.e. Maximo, Archibus, etc.) edit
following section to meet specific needs. Contact
OMSI EIC or Project Manager for guidance.**

Provide data in format that can be imported into [Archibus] [Maximo] CMMS.

1.5 SUBMITTAL REQUIREMENTS

Provide OMSI Submittals in accordance with the following submittal requirements.

1.5.1 Preliminary Submittal

Provide two hard copies. Deliver one copy to the designated point of contact at the activity and one copy to the [Navy Technical Representative] [Contracting Officer]. Include the cover sheets, spine inserts, table of contents, binders, dividers, and other materials as necessary to demonstrate the proposed physical arrangement of the OMSI manuals and the quality of the copies, dividers and tabs. Present the submittal in sufficient detail to evaluate the data collection and arrangement process. The [Navy Technical Representative] [Contracting Officer] copy, with review comments, will be returned to the Contractor for preparation of the 100% submittal. The submittal includes, as a minimum, the following information:

- a. All available Part I, Facility Information.

- b. All systems of Part II, Primary Systems Information. At least one system shall be essentially complete. The remaining systems shall be at least 50% complete.
- c. At least two divisions of Part III, Product Data.
- d. An updated submittal matrix, tailored from the construction Submittal matrix, to identify those submittals needed for the preparation of the OMSI. The Contractor shall use the submittal matrix to track submittals needed for the OMSI.

1.5.2 100% - Prefinal Submittal

Provide two hard copies. Deliver one copy to the [Navy Technical Representative] [Contracting Officer] and deliver one copy to the designated point of contact at the activity. Include a copy of the preliminary submittal review comments along with the Contractor's response to each item. The [Navy Technical Representative] [Contracting Officer] copy with review comments will be returned to the Contractor for preparation of the final submittal. The activity keeps their 100% OMSI Binders to operate and maintain the facility from Beneficial Occupancy Date (BOD) through submission of the final submittal. Therefore, it should contain all the required information that is available at the time of submission.

1.5.3 Final Submittal

Provide two hard copies and two sets of electronically formatted information. Deliver one hard copy and one set of discs to the [Navy Technical Representative] [Contracting Officer]. Deliver one hard copy and one set of discs to the activity point of contact. Final submittal must address all previous review comments. 100% review comments may include problems discovered during OMSI review, site validation, and facility start up. The comments will be provided to the Contractor at various times before and after the facility BOD. The 100% submittal of OMSI and review comments will be returned to the Contractor for preparation of the final submittal. If the comments require only minor corrections, the hard copies of the OMSI will not be returned and the Contractor shall correct the hard copy OMSI by submitting correction sheets and directions on how to make the corrections. The final submittal shall include a copy of the 100% submittal review comments along with a response to each item.

1.5.4 Submittal Schedule

Preliminary	_____	50% of construction complete
Prefinal	_____	60 days prior to BOD
Final	_____	120-180 days after BOD

PART 2 PRODUCTS

2.1 DESCRIPTION OF WORK

2.1.1 OMSI Part I - Facility Information

- a. General Facility and System Description - Describe the function of the facility. Detail the overall dimensions of the facility, number of floors,

foundation type, expected number of occupants, and facility Category Code. List and generally describe all the facility systems listed in Part II, Primary Systems Information and any special building features (for example, cranes, elevators, and generators). Include photographs marked up and labeled to show key operating components and the overall facility appearance. Include a copy of the final "Completion Certification". The Construction Quality Control Manager shall provide this documentation.

b. Basis of Design - Include the Basis of Design that shows the basic design scope of work, assumptions and the original intentions of the design A/E. [Include a copy of the final "Design Quality Control Report Certification". The Design Quality Control Manager shall provide this documentation].

c. Safety Hazards - List all residual hazards identified in the Requirements Hazard Analysis as prepared by the design A/E. Provide recommended safeguards for each identified hazard.

d. Floor Plans - Provide uncluttered, legible 11" x 17" floor plans. Exact copies of the design plans are not acceptable. Include only room numbers, type or function of spaces, and overall facility dimensions on the floor plans. Do not include construction instructions, references, frame numbers, etc.

e. Utility Connection and Cutoff Plans - Provide utility site plans and floor plans that indicate the main interior and exterior connection and cutoff points for all utilities. Include enough information to enable someone unfamiliar with the facility to locate the connection and cutoff points. Indicate the room number, panel number, circuit breaker, valve number, etc., of each connection and cutoff point, and what that connection and cutoff point controls. These plans are in addition to Floor plans.

f. Extended Warranty Information - List all warranties for products, equipment, components, and subcomponents whose duration exceeds one year. Cross-reference the list to the warranty copies included in Part III, Product Data. For each warranty listed indicate the applicable specification section, duration, start date, end date, and the point of contact for warranty fulfillment. Also, list or reference all specific operation and maintenance procedures that must be performed to keep the warranty valid.

g. Equipment Listing - Provide a table that lists the major equipment shown on the design equipment schedules. Show the item descriptions, locations, model numbers; and the names, addresses, and telephone numbers of the manufacturers, suppliers, contractor and subcontractors.

h. HVAC Filters - Provide a table that lists the quantity, type, size, and location of each HVAC filter.

i. Floor Coverings - Provide a table that lists by room number (including hallways and common spaces), the type of space, and the type and area of floor. The table will include a facility summary of the total area for each type of space and floor covering.

j. Wall Surfaces - Provide a table that lists by room number (including hallways and common spaces), the type of wall surface, and area of wall surface. The table will include a facility summary of the total area for each type of wall surface.

k. Ceiling Surfaces - Provide a table that lists by room number (including hallways and common spaces), the type of ceiling surface, and area of ceiling surface. The table will include a facility summary of the total area for each type of ceiling surface.

l. Windows - Provide a table that lists by room number (including hallways and common spaces), the type of window, window size, number of each size and type, and special features. The table will include a facility summary of the total number for each type and size of window.

m. Light Fixtures - Provide a table that lists by room number (including hallways and common spaces), type of light fixture, number of light fixtures, type of bulbs or tubes, and number of bulbs or tubes. The table will include a facility summary of the total number of fixtures of each type and number of bulbs or tubes of each type.

n. Plumbing Fixtures - Provide a table that lists by room number, the number and type of plumbing and bathroom plumbing fixtures (for example, sinks, toilets, urinals, showers and drinking fountains).

o. Roofing - Provide the total area of each type of roof surface and system. Provide the name of the roofing product and system; manufacturer's, supplier's, and installer's names, addresses, and phone numbers. For each type of roof, provide a recommended inspection, maintenance and repair schedule that details checkpoints, frequencies, and prohibited practices. List roof structural load limits.

p. Supply Inventory Requirements - Provide a list of maintenance and repair supplies (for example, spare parts, fuels, and lubricants) required to ensure continued operation without unreasonable delays. Identify and list parts and supplies that have long lead times for purchase. Give special consideration to facilities at remote locations.

q. As-built Drawing List - Provide a list of the as-built drawings. Include drawing number and title. Identify where the drawings and specifications will be filed. Include a copy of the certificate attesting to the accuracy of the as-built drawings. The Construction Quality Control Manager shall provide this documentation.

**NOTE: The Training Requirements and Skill Matrix
are not required on non-complex projects.**

r. Training Requirements - Provide a list of recommended training related to the operation and maintenance of each installed system that is available from the manufacturer or other source. Provide the name, address, and phone number of point of contact. The training requirements shall pertain only to systems listed in Part II, Primary Systems Information.

s. Skill Matrix - Provide a matrix by system and skill that identifies productive hours required to maintain the facility's systems listed in Part II, Primary Systems Information. An example of the format is as follows:

Hours				
Skill required	System 1	System 2	System 3	Total/Skill
Skill 1				
Skill 2				
Skill 3				

Skill 4
Total/System

2.1.1.2 OMSI Part II - Primary Systems Information

Prepare the information required for Part II, Primary Systems Information using a systems approach. This approach requires that consideration be given to the entire system (that is, the interfaces of equipment, connections and material flow within the system). Include the following systems:

**NOTE: Contact OMSI EIC/Project Manager to determine
which primary systems need to be included in Part II.**

- [a. HVAC and Controls System]
- [b. Fire Alarm System]
- [c. Sprinkler System]
- [d. Elevators]
- [e. Emergency Power Systems]
- [f. Compressed Air Systems]
- [g. Industrial Ventilation Systems]

Use Notes, Cautions and Warnings throughout the Part II, Primary Systems Information to emphasize important and critical instructions and procedures. Place notes, cautions, and warnings in bold font immediately before the applicable instructions or procedures. Notes, cautions and warnings are defined as follows:

Note: Highlights an essential operating or maintenance procedure, condition or statement.

Caution: Highlights an operating or maintenance procedure, practice, or condition, statement, etc., that, if not strictly observed, could result in damage to or destruction of equipment, loss of mission effectiveness, or health hazards to personnel.

Warning: Highlights an operating or maintenance procedure, practice, condition, or statement, etc., that, if not strictly observed, could result in injury to or death of personnel.

a. Operation

(1) System Description - Provide a detailed discussion of the system composition and operation. Include technical details that are essential for an understanding of the system.

(2) Start-Up and Shutdown Procedures - Provide step by step instructions to bring systems from static to operational configurations and from operating to shutdown status.

(3) Normal Operating Instructions - Provide a discussion of the norms (for example, temperatures, pressures, and flow rates) expected at each zone or phase of the system. Supplement the discussion with control and wiring diagrams and data.

(4) Emergency Operating Instructions - Provide emergency operating procedures in the event of equipment malfunctions.

Provide shutdown instructions for fires, explosions, spills, or other contingencies.

(5) System Flow Diagrams - Provide a flow diagram indicating system liquid, air or gas flow during normal operations. Integrate all system components into the diagram. A compilation of non-integrated, flow diagrams for the individual system components are not acceptable.

(6) Diagrammatic Plans - Provide floor plans indicating the location of equipment and configuration of the system installation. Include the configuration of associated piping or wiring. Subordinate structural features to utility features.

(7) Environmental Considerations - Provide a listing of the equipment which requires special operation, reporting, testing, analysis or inspection to comply with federal, state or local environmental laws. Examples of possible list items include back flow preventer inspections, underground storage tank testing, hazardous material or waste usage and storage documentation, and air pollution control devices. Each item in the list will include requirements for environmental operation, reporting, testing, analysis, and inspection as well as references to respective implementing regulations, statutes, or policies. [For projects in Italy, Greece and Spain, the OMSI manuals shall include requirements needed to comply with the environmental Final Governing Standards (FGS) for that country.]

(8) Field Test Reports - Provide Field Test Reports (SD-12) that apply to equipment associated with the system.

(9) Operator Servicing Requirements - Provide instructions for services to be performed by the operator such as lubrication, adjustments, and inspection.

(10) Safety Instructions - Provide a list of all personnel hazards and equipment safety precautions including recommended safeguards.

(11) Valve List - Provide a list of all valves associated with the system. Show valve type, identification number, function, location and normal operating position.

(12) Operating Log - Provide forms, samples, and instructions for keeping necessary operating records.

(13) Training Sessions - Provide copies of all final training session verification documents. Include the subject of the training, when & where it was accomplished, and who attended. Indicate where videotaped training sessions were delivered to for future access. The Design Quality Control Manager shall provide by this information.

b. Preventive Maintenance

(1) Preventive Maintenance Plan and Schedule - Provide a Preventive Maintenance (PM) plan using manufacturer's recommendations and sound engineering practice. Include all major pieces of equipment. Provide a check sheet that details

maintenance tasks and associated frequencies. Also provide an annual schedule indicating when maintenance tasks should be performed such that work is spread as evenly as possible throughout the year.

(2) Preventive Maintenance Procedures - Provide Task Card for each individual maintenance task identified on the PM plan and Schedule. Include detailed PM procedures, safety instructions and precautions including Lock out/tag out precautions, required skill level, number of personnel needed, frequency, special tools needed, parts needed, and estimated time required to complete the task.

(3) Lubrication Schedule - Provide a lubrication schedule indicating types, grades and capacities of lubricants for specific temperature ranges and applications.

(4) Preventive Maintenance Log - Provide a tabular form for recording the accomplishment of PM. Log must record date PM was performed, findings, action taken, parts used, time required to complete the work, and other data necessary to provide a good historical record of PM activities.

c. Repair

(1) Troubleshooting Guides and Diagnostic Techniques - Provide step by step procedures for isolating the cause of system malfunctions. The procedures shall clearly state indications or symptoms of trouble; the sequential instructions, including checks and tests to be performed and conditions to be sought, to determine the cause; and remedial measures to bring the equipment and system to operating condition. Identify special test equipment required to perform the procedures. Start the troubleshooting guide at the system level and proceed to a level where detailed manufacturer's troubleshooting procedures for equipment and components can be referenced.

(2) Repair Procedures - Provide repair instructions required to restore equipment to proper operating standards. References must be specific as to location within the OMSI.

(3) Removal and Replacement Instructions - Provide or refer to the manufacturer's data for the instructions on the removal and replacement of equipment components. References must be specific as to location within the OMSI.

d. Manufacturer's Data

(1) Operation and Maintenance Data - Include the O&M Data Package information provided by the Contractor per the technical sections of the specification and Section 01781, "Operation and Maintenance Data". Incorporate this information into each system discussion under the Operation, Preventive Maintenance and Repair sections of Part II, Primary Systems Information.

(2) Manufacturer's Equipment Information - Provide drawings, illustrations and technical data furnished by the manufacturer for the equipment and system components. Organize and index the information for easy reference.

2.1.3 PART III - Product Data

a. Record of Material and Equipment - Provide a record of materials and equipment used in the facility construction. Organize this data in accordance with the NISTIR 6389 (UNIFORMAT II, Elemental Classification for Building Specifications, Cost Estimation, and Cost Analysis per ASTM E 1557). Include manufacturer's data submittals required in the construction specification. Examples of Product Data include catalog cuts, data sheets, test reports and warranty sheets. Include shop drawings relevant to the O&M of the facility or system except those discussed in Part II, Primary Systems Information. Do not include extraneous data, (for example, transmittal sheets, certifications, welder qualifications, contractor qualifications and certificates of compliance). Highlight or note submittals that contain information on several parts or model numbers to identify installed material. Product data included in Part III, Product Data should use metric units if metric OMSI is required. The Contractor is not required to convert to metric units in product data that contains only English units.

b. Warranties - Provide copies of extended equipment warranties.

PART 3 EXECUTION

3.1 DOCUMENTATION SITE VISIT

Provide the services of one person having detailed technical knowledge of the OMSI to be on site for one day to obtain details and documentation on field changes, to take appropriate photos and to gather missing submittal data. Timing of visit will depend on actual construction progress but will generally occur approximately 60 to 120 days prior to the OMSI Prefinal submittal date.

3.2 VALIDATION

Provide the services of two people, who have detailed technical and organizational knowledge of the OMSI, to be on site for one day to perform the validation of the OMSI. The purpose of the validation is to present the OMSI to the users and to verify the OMSI's completeness and accuracy. The validation site visit will be performed at the Prefinal stage. Contact the [Navy Technical Representative] [Contracting Officer] for the exact date.

3.2.1 Presentation

Provide a presentation of the OMSI Prefinal submittal to Government and other representatives at the activity site. The presentation details how the OMSI is organized, what it contains, how it is referenced and cross referenced, and how to use it in day-to-day operation, maintenance and repair.

3.2.2 Verification

Field verify the accuracy and completeness of the OMSI. This includes verifying that the systems and equipment in the OMSI accurately reflects the as-built conditions; verifying that O&M procedures are appropriate for the systems and equipment that it supports; and that equipment nomenclature and system configurations are accurate. Make corrections and recommended in-scope changes to the OMSI prior to delivery of the final submittal.

PREFACE

**NOTE: Insert Command address in blank bracket
below, and OMSI point of contact.**

INTRODUCTION

Operation and Maintenance Support Information (OMSI) was prepared for this project to help you operate, maintain, and repair the facility over its life cycle. OMSI provides a comprehensive, organized library of as-built materials, equipment and systems. Use the OMSI as the first step in solving your operation, maintenance or repair problems. Your comments or suggestions are welcome and should be forwarded to: [____].

CONTENTS

OMSI Part I, Facility Information: This portion of the OMSI contains Basic User Information needed on a daily basis by the owner or tenant of the facility. Examples: General Facility and System Descriptions, Utility Connection and Cut-off Plans, Safety Hazards, Warranty Information. Part I, Facility Information also provides the information you need to quickly prepare Maintenance Service Contracts and Performance Work Statements for O&M and Custodial Service Contracts. Examples of this information: area totals for floor coverings, wall and ceiling surfaces; number, types, and sizes of lighting fixtures, bathroom fixtures, windows and HVAC filters.

OMSI Part II, Primary Systems Information: This portion of the OMSI provides detailed operation, preventive maintenance, repair, and manufacturer's data for each system selected. This information includes items such as normal and emergency operating procedures, flow diagrams, PM requirements, spare parts, troubleshooting, repair procedures, and warranty provisions. You can expect better PM, faster repairs, and reduced down time by using information in this part of the OMSI.

OMSI Part III, Product Data: This portion of the OMSI consists of construction contractor submittals for as-built materials and equipment such as manufacturer's catalog data, shop drawings, test data, and Operation and Maintenance Data not included in Part II. Part III data is organized in accordance with the NISTIR 6389 (UNIFORMAT II, Elemental Classification for Building Specifications, Cost Estimation, and Cost Analysis). This allows you to quickly identify the exact product installed, part number, manufacturer, etc. Part III also includes architectural product information for items such as ceiling tile, carpeting, plumbing, and lighting fixtures. This information will keep your facility looking sharp for many years through product-specific maintenance and replacement of its architectural features.

UPDATING

The OMSI must reflect the facility's existing components; therefore, you must continually update the OMSI manuals. When equipment or components are replaced, add pertinent new information to each OMSI set. Be sure to update all sections of the OMSI that reference the replaced item. Purge all information on the replaced item to prevent confusion.

-- End of Section --
