UNIFIED FACILITIES GUIDE SPECIFICATIONS

References are in agreement with UMRL dated October 2017

SECTION 10 11 00

VISUAL DISPLAY UNITS 08/17

NOTE: This guide specification covers the requirements for visual communications specialties.

Adhere to UFC 1-300-02 Unified Facilities Guide Specifications (UFGS) Format Standard when editing this guide specification or preparing new project specification sections. Edit this guide specification for project specific requirements by adding, deleting, or revising text. For bracketed items, choose applicable item(s) or insert appropriate information.

Remove information and requirements not required in respective project, whether or not brackets are present.

Comments, suggestions and recommended changes for this guide specification are welcome and should be submitted as a Criteria Change Request (CCR).

PART 1 GENERAL

1.1 REFERENCES

NOTE: This paragraph is used to list the publications cited in the text of the guide specification. The publications are referred to in the text by basic designation only and listed in this paragraph by organization, designation, date, and title.

Use the Reference Wizard's Check Reference feature when you add a RID outside of the Section's Reference Article to automatically place the reference in the Reference Article. Also use the Reference Wizard's Check Reference feature to update the issue dates.

References not used in the text will automatically
be deleted from this section of the project
specification when you choose to reconcile
references in the publish print process.

The publications listed below form a part of this specification to the
extent referenced. The publications are referred to within the text by the
basic designation only.

1.2 DEFINITIONS OR ADMINISTRATIVE REQUIREMENTS

NOTE: The designer has the option to require that visual display boards for a project be provided by one manufacturer when appropriate. It is the designer's responsibility to determine if all products being specified for a project are available from a minimum of three manufacturers. Not all manufacturers produce the variety of visual display boards offered in this specification.

Alternate frame methods such as: self-edge for fabric or vinyl covered tackboards, vinyl edge on tackboards, and markerboards are options but are not available from all manufacturers. Designer must research available sources.

The term visual display board when used herein includes presentation boards, marker boards, tackboards, board cases, display track system and horizontal sliding units; submit manufacturer's descriptive data and catalog cuts plus manufacturer's installation instructions, and cleaning and maintenance instructions. Visual display boards must be from manufacturer's standard product line. Submit certificate of compliance signed by Contractor attesting that visual display boards conform to the requirements specified.

1.3 SUBMITTALS

NOTE: Review submittal description (SD) definitions in Section 01 33 00 SUBMITTAL PROCEDURES and edit the following list to reflect only the submittals required for the project.

The Guide Specification technical editors have designated those items that require Government approval, due to their complexity or criticality, with a "G." Generally, other submittal items can be reviewed by the Contractor's Quality Control System. Only add a "G" to an item, if the submittal is sufficiently important or complex in context of the project.

For submittals requiring Government approval on Army projects, a code of up to three characters within the submittal tags may be used following the "G" designation to indicate the approving authority. Codes for Army projects using the Resident Management System (RMS) are: "AE" for Architect-Engineer; "DO" for District Office (Engineering Division or other organization in the District Office); "AO" for Area Office; "RO" for Resident Office; and "PO" for Project Office. Codes following the "G" typically are not used for Navy, Air Force, and NASA projects.

Use the "S" classification only in SD-11 Closeout Submittals. The "S" following a submittal item indicates that the submittal is required for the Sustainability eNotebook to fulfill federally mandated sustainable requirements in accordance with Section 01 33 29 SUSTAINABILITY REPORTING.

Choose the first bracketed item for Navy, Air Force and NASA projects, or choose the second bracketed item for Army projects.

Government approval is required for submittals with a "G" designation; submittals not having a "G" designation are for [Contractor Quality Control approval.] [information only. When used, a designation following the "G" designation identifies the office that will review the submittal for the Government.] Submittals with an "S" are for inclusion in the Sustainability eNotebook, in conformance to Section 01 33 29 SUSTAINABILITY REPORTING. Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

SD-03 Product Data

Visual Display Board; G[, [_____]]

Projection Screen; G[, [_____]]

SD-04 Samples

Aluminum; G[, [_____]]

Porcelain Enamel; G[, [_____]]

Materials; G[, [_____]]

SD-07 Certificates

Indoor Air Quality

SD-11 Closeout Submittals

- [Indoor air quality for markerboards; S]
- [Indoor air quality for tackboards; S]
- [Indoor air quality for projection screen; S]

1.4 CERTIFICATIONS

1.4.1 Indoor Air Quality

1.4.1.1 Indoor Air Quality for Visual Display Products

NOTE: The Government's preference is for use of products that have been certified for indoor air quality by a third-party organization such as Greenguard or SCS Global Services. However, it must be verified there is a certified product available that is both cost effective and appropriate for the

project. The requirements of this paragraph are invoked when the designer of record confirms local/regional availability of Greenguard or SCS products and includes the bracketed requirements for indoor air quality certified products in Part 2 of this Section.

Provide products certified to meet indoor air quality requirements by UL 2818 (Greenguard) Gold, SCS Global Services Indoor Advantage Gold or provide certification or validation by other third-party program that products meet the requirements of this Section. Provide current product certification documentation from certification body.

1.5 DELIVERY, STORAGE, AND HANDLING

Deliver materials to the building site in the manufacturer's original unopened containers and store them in a clean dry area with temperature maintained above 10 degrees C 50 degrees F. Stack materials according to manufacturer's recommendations. Visual display boards must be allowed to acclimate to the building temperature for 24 hours prior to installation.

1.6 WARRANTY

Provide manufacturer's standard performance guarantees or warranties that extend beyond a one year period.

PART 2 PRODUCTS

2.1 MATERIALS

Submit section of core material showing the lamination of colored cork, natural cork, woven fabric, non-woven fabric, and vinyl wall covering. Submit sample of hardwood and plastic laminate finish, and glass type. Samples must be minimum 100 by 100 mm 4 by 4 inches and show range of color.

2.1.1 Porcelain Enamel

Provide marker board writing surface composed of porcelain enamel fused to a nominal 0.378 mm 28 gauge thick steel, laminated to a minimum 6 mm 1/4 inch thick core material with a steel or foil backing sheet. Writing surface must be capable of supporting paper by means of magnets. Marker board surface for display track system may be a powder paint dry erase surface adhered to a nominal 1.214 mm 18 gauge thick steel. Submit section showing porcelain enamel coating, steel, core material and backing.

2.1.2 Cork

Cork must be a continuous resilient sheet made from soft, clean, granulated cork relatively free from hardback and dust and bonded with a binder suitable for the purpose intended. The wearing surface must be free from streaks, spots, cracks or other imperfections that would impair its usefulness or appearance. The material must be seasoned, and a clean cut made not less than 13 mm 1/2 inch from the edge must show no evidence of soft sticky binder.

2.1.2.1 Colored Cork

Provide colored cork composed of pure cork and natural color pigments that are combined under heat and pressure with linseed oil. Colored cork must be colored throughout and must be washable. The burlap backing must be deeply imbedded and keyed to the work sheet being partially concealed in it and meeting the requirements of ASTM F148.

2.1.2.2 Natural Cork

Material must be a single layer of pure grain natural cork without backing or facing. The color must be light tan. The cork sheet must have a tensile strength of not less than 275 kPa 40 psi when tested in accordance with ASTM F152.

2.1.3 Woven Fabric

NOTE: A multi-colored, patterned, textured fabric will aid in hiding pin and tack holes.

Fabric other than manufacturer's standard may be used; however there may be an upcharge cost and minimum quantity requirements. Provide minimum generic specifications to obtain fabric required.

Provide plain weave fabric. Fiber content must be [100 percent polyester] [_____]. Minimum total weight must be [496 grams plus or minus 14 grams per linear meter 16 oz. plus or minus 0.5 oz. per lineal yard] [_____]. Fabric must have a Class A flame spread rating of 0-50 and smoke development rating of 0-450 in accordance with ASTM E84.

2.1.4 Non-Woven Fabric

Fabric must be non-woven and hooktape compatible. Fiber content must be [100 percent polyester, 100 percent polyolefin or 100 percent nylon] [_____, [backed]]. Minimum total weight must be [340 grams plus or minus 14 grams per linear meter 11 oz. plus or minus 0.5 oz. per lineal yard for 1524 mm 60 inch wide fabric] [_____]. Fabric must have a Class A flame spread rating of 0-50 and smoke development rating of 0-450 in accordance with ASTM E84.

2.1.5 Vinyl Wall Covering

NOTE: A multi-colored, textured, vinyl wall covering will aid in hiding pin and tack holes.

Vinyl wall covering other than manufacturer's standard may be used; however there may be an upcharge cost and minimum quantity requirements. Provide minimum generic specifications to obtain fabric required.

Provide vinyl wall covering conforming to ASTM F793/F793M, Category V. Vinyl wall covering must have a Class A flame spread rating of 0-50 and smoke development rating of 0-450 in accordance with ASTM E84.

2.1.6 Aluminum

Aluminum frame extrusions must be alloy 6063-T5 or 6063-T6, conform to ASTM B221M ASTM B221, and be a minimum 1.5 mm 0.06 inches thick. Exposed aluminum must have an anodized, satin finish. Straight, single lengths must be used wherever possible. Joints must be kept to a minimum. Corners must be mitered and must have a hairline closure. Submit sections of frame, map rail, and chalktray, and [two] [_____] map hooks.

2.1.7 Hardwood

Exposed hardwood for frames, cabinets, and cases must be oak, walnut or mahogany. Provide hardwood with a durable factory-applied stain and lacquer finish of a type standard with the manufacturer.

2.1.8 Glass

Glass must be comprised of tempered glass in accordance with ANSI Z97.1 and must conform to ASTM C1048, Kind FT (fully tempered), Condition A (uncoated), Type I, Class I (clear), thickness as specified.

2.2 PRESENTATION BOARD

NOTE: A presentation board with an integral pull down projection screen is recommended if projection surface is required. Some units are not available with projection screens. Hot spots may occur if writing surface is used as a projection surface.

The type of doors, double or single, is dependent on the size of the presentation board.

The presentation board must be a wall hung cabinet with lockable [double doors] [single door] and [must] [must not] have a projection screen that pulls down over the marker board writing surface in the cabinet interior. The doors must be attached to cabinet with piano hinges and have a catch or closure to keep doors closed when not in use. The interior of the cabinet must contain a porcelain enamel markerboard writing surface with chalktray, a flip chart that can be hung on an interior door panel, and fabric covered tacksurface on the interior door panels. The cabinet must be [oak hardwood] [walnut hardwood] [mahogany hardwood] [plastic laminate] [_____] . The edge detailing must be [rectilinear] [bullnose or radius] [traditional] [_____] . Dry erase markings must be removable with a felt eraser or dry cloth without ghosting. Each unit must come complete with an eraser and four different color compatible dry erase markers. Two keys must be provided for each unit. The size must be as shown in [paragraph PLACEMENT SCHEDULE] [the drawings] [_____] .

2.3 MARKERBOARD

NOTE: Hot spots may occur if this product is used as a projection screen. A visual display board unit with pull down projection screen should be specified if a projection surface is required.

Not all chalktrays are available in the same material as the frame, determine if this is a requirement to acquire desired design aesthetics.

Indicate if a full length chalktray is needed to meet user requirements. A full length chalktray is not available from all manufacturers. This requirement may increase the cost and add lead time. Generally the full length chalktray is the same length material as the frame.

Specify the map rail if there is a requirement to display maps, drawings, or large sheets of paper. Not all marker boards are available with map rail and map rail accessories.

If necessary add requirements for graphics. Graphics can include such items as a grid, ruled lines or logo.

Full wall application of markerboard writing surface is an option. Designer must modify the following paragraph to meet specific requirements and must verify that application is in compliance with National Fire Protection Association (NFPA) Life Safety Code 101.

NOTE: Retain the last bracketed sentence requiring products with indoor air quality certification when the designer of record confirms local/regional availability of Greenguard or SCS products that does not impact cost effectiveness.

Markerboard must have a porcelain enamel writing[, magnetic,] surface and a chalktray. Markerboard must be a factory assembled unit complete in one piece, without joints whenever possible. When markerboard dimensions require delivery in separate sections, components must be prefabricated at the factory, disassembled for delivery and jointed at the site. Frame must be [oak] [walnut] [mahogany] [aluminum] [_____]. Chalktray must [be the same material as the frame] [and] [extend the full length of the liquid markerboard]. The markerboard [must not include a map rail] [must have a map rail]. The map rail with a tackable insert must extend the full length of the liquid chalkboard, and must have map hooks with clips for holding sheets of paper. Two map hooks must be provided for each 1220 mm 4 foot of map rail.] Dry erase markings must be removable with a felt eraser or dry cloth without ghosting. Each unit must come complete with an eraser and four different color compatible dry erase markers. The size must be as shown in [paragraph PLACEMENT SCHEDULE] [the drawings] [_____]. Provide markerboards that meet the emissions requirements of CDPH SECTION 01350 (limit requirements for either office or classroom spaces regardless of space type).

[Provide certification of indoor air quality for markerboards.]

2.4 TACKBOARDS

NOTE: Retain the last sentence below requiring products with indoor air quality certification when the designer of record confirms local/regional availability of Greenguard or SCS products that does not impact cost effectiveness.

Provide tackboards that meet the emissions requirements of CDPH SECTION 01350 (limit requirements for either office or classroom spaces regardless of space type). [Provide certification of indoor air quality for tackboards.]

2.4.1 Cork

NOTE: Tackboards with 6 mm 1/4 inch thick cork are more durable and higher in cost than tackboards with 3 mm 1/8 inch thick cork. Tackboards constructed with insulation board or fiberboard are generally less durable and less expensive than tackboards constructed of a hardboard. Cost of natural cork tackboards is generally less than colored cork tackboards.

Tackboard must consist of a minimum [3 mm 1/8 inch thick colored cork with burlap backing laminated to a minimum 10 mm 3/8 inch thick insulation board or fiber board] [6 mm 1/4 inch thick colored cork with burlap backing laminated to a minimum 6 mm 1/4 inch thick hardboard] [3 mm 1/8 inch thick natural cork laminated to a minimum 10 mm 3/8 inch thick insulation board or fiber board] [6 mm 1/4 inch thick natural cork laminated to a minimum 6 mm 1/4 inch thick hardboard], and must have an [oak] [aluminum] [_____] frame. The size must be as shown in [paragraph PLACEMENT SCHEDULE] [the drawings] [_____].

2.4.2 Vinyl Covered

Tackboard must have a vinyl wall covering laminated to a minimum [3 mm 1/8 inch thick cork laminated to a minimum 10 mm 3/8 inch thick insulation board or fiberboard] [6 mm 1/4 inch thick cork laminated to a minimum 6 mm 1/4 inch thick hardboard or particleboard] [13 mm 1/2 inch thick insulation board or fiberboard], and must have an [oak] [aluminum] [_____] frame. The size must be as shown in [paragraph PLACEMENT SCHEDULE] [the drawings] [_____].

2.4.3 Fabric Covered

Tackboard must have a [woven] [non-woven] fabric covering laminated to a minimum [3 mm 1/8 inch thick cork laminated to a minimum 10 mm 3/8 inch thick insulation board or fiberboard] [6 mm 1/4 inch thick cork laminated to a minimum 6 mm 1/4 inch thick hardboard or particleboard] [13 mm 1/2 inch thick insulation board or fiberboard], and must have an [oak] [aluminum] [_____] frame. The size must be as shown on [the Placement Schedule] [the drawings] [_____].

2.5 CASE FOR BOARD UNIT

The case for the board unit must be [surface] [recess] mounted and have

[hinged minimum 5 mm 3/16 inch thick] [sliding minimum 6 mm 1/4 inch thick] tempered glass doors that are lockable. Case must be [aluminum] [oak] [_____]. Mitered corners must be reinforced for rigidity. Doors must be [equipped with continuous piano hinges. Door glass must be framed with the case material, and be reinforced at all corners. Door framing must not depend upon the glass for rigidity. Multiple door cases must have an elbow catch] [sliding and have aluminum "H" molding at top and bottom of case]. The interior side of the back panel must be tackable and must be composed of [a minimum 6 mm 1/4 inch colored cork] [a minimum 6 mm 1/4 inch natural cork] [a vinyl wall covering laminated to a minimum 6 mm 1/4 inch cork] [[_____] laminated to a minimum 6 mm 1/4 inch fiberboard] [_____]. Two keys must be provided for each unit. The size must be as shown on [the Placement Schedule] [the drawings] [_____].

2.6 DISPLAY TRACK SYSTEM

NOTE: Track systems with more than one level have increased component capacity. Not all components can be located on all levels, coordinate locations with manufacturer recommendations.

This method of display must be a flexible and interchangeable system that consists of lightweight presentation components suspended from a wall mounted, linear, horizontal track. Track must have [one] [two] [_____] levels to attach components. Track must allow attached components to slide horizontally. Presentation components must be capable of being lifted from the track and being relocated to allow for reconfiguration. Components must be capable of being installed on the track without the use of tools for installation, removal, and reconfiguration. The presentation components must consist of a [retractable projection screen,] [tilted projection screen (top tilts forward),] [reversible panel with dry erase markerboard on both sides,] [reversible panel with markerboard on one side and woven fabric covered tacksurface on the other,] [[1] [_____] [removable shelf],] [panel with adjustable flipchart,] [_____] and [display rail for setting presentation materials or a holder for displaying maps, presentation boards, drawings and other paper display materials up to a [3] [6] mm [1/8] [1/4] inch thickness]. Components must be installed and located on track in accordance with manufacturer recommendations. Marker boards must be provided with a marker tray. Marker board surface must accept magnets. Dry erase markings on the marker board must be removable with a felt eraser or dry cloth without ghosting. Each unit must come complete with an eraser and four different color compatible dry erase markers. The sizes must be as shown in [paragraph PLACEMENT SCHEDULE] [the drawings] [_____]. Track and trim materials must be [standard products of the manufacturer] [_____].

2.7 HORIZONTAL SLIDING UNITS

NOTE: Specify the number and types of panels. Identify which panels must be installed in which track.

The horizontal sliding unit must be composed of a fixed back panel, sliding panels, an aluminum track assembly, and must have a map rail and chalktray. The unit must have [2] [3] [4] [_____] tracks. The fixed back

panel must be [markerboard] [tackboard]. The unit must have [_____] marker board sliding panel and [_____] tackboard sliding panel. The track assembly and exposed members, including panel edging and chalktray, must be extruded aluminum. Frame assembly must be reinforced at corners. Sliding panels must be suspended from the top and must slide over the aluminum track using molded nylon ball bearing rollers at the top of the track and nylon guide rollers at the bottom of the track to eliminate vibration and to provide quiet and smooth operation of the panels. Sliding panels must have finger pulls at each end. The map rail must have a tackable insert and extend the length of the horizontal sliding unit. The map rail must have map hooks with clips for holding sheets of paper. Two map hooks must be provided for each 1220 mm 4 foot of map rail. Chalktray must extend the full length of the horizontal sliding unit. Dry erase markings on the marker board must be removable with a felt eraser or dry cloth without ghosting. Each unit must come complete with an eraser and four different color compatible dry erase markers. The size must be as shown in [paragraph PLACEMENT SCHEDULE] [the drawings] [_____] .

2.8 COPYBOARD

NOTE: Models are available that have copy feature only and do not operate with a PC.

Specify PC ready or PC interface if required.

Coordinate PC requirements for PC ready and PC interface units with user to assure the government furnished and government installed PC and printer will be compatible with copyboard PC requirements.

Some models that have PC interface do not have a built-in printer since printer capability is obtained through interfacing with the PC and printer.

Coordinate copyboard requirements and locations with electrical engineer to assure that electrical outlets or hardwiring at the appropriate locations are included in the design.

The copyboard must be wall mounted, 120V, UL listed, and have a [2] [_____] sided rotating screen, and [a built-in printer that prints letter size copies] [and] [capability to save and print to a government furnished and government installed PC and printer]. Copyboard surface must have grid lines and accept dry erase markers. Dry erase markings must be removable with a felt eraser or dry cloth without ghosting. [Copyboard must [have PC interface] [or] [be PC ready].] [PC interface kit must be provided for each PC ready unit.] Copyboards must [be hardwired] [have an electrical cord that plugs into an electrical wall outlet]. Electrical work must conform to requirements of Section 26 20 00 INTERIOR DISTRIBUTION SYSTEM. Each copyboard must come complete with an eraser and three different color compatible dry erase markers. The size must be as shown in [paragraph PLACEMENT SCHEDULE] [the drawings] [_____] .

2.9 PROJECTION SCREEN

NOTE: The designer must make appropriate selections based on the type of projection screen required. Not all options are available for all screens. Designer must research available sources and edit accordingly.

A selection needs to be made between a standard screen and tab tensioned screen. The tab tensioned screens have better picture quality since the viewing screen is flat, they are recommended when the primary use for the screen is for computer generated images.

If required, specify extra drop to lower picture area. Identify length of extra drop and if extra drop must be white or black.

Seams may be required dependent on size of screen.

Coordinate projection screen requirements and locations with electrical engineer to assure that electrical outlets and hardwiring at the appropriate locations are included in the design.

NOTE: Retain the last bracketed sentence requiring products with indoor air quality certification when the designer of record confirms local/regional availability of Greenguard or SCS products that does not impact cost effectiveness.

[Wall mounted] [Ceiling mounted] [Recessed mount] motorized projection screen must have 120V motor that is lubricated for life, quick reversal type, has overload protector, integral gears, and preset accessible limit switches. Recessed mount projection screens must have an operable closure door and access panel. Screen must be flame retardant, mildew resistant, and [glass beaded] [white matte] [_____] [with [white] [black] masking borders] [tab tensioned. Tab tensioned screens must have a vinyl surface that is stretchable]. Bottom of screen fabric must be weighted with metal rod. Roller must be a rigid metal at least [75] [125] [_____] mm [3] [5] [_____] inches in diameter mounted on sound absorbing supports. Motor will be [end mounted] [or] [motor-in-roller] design. Screen must have a 3 position control switch to stop or reverse screen at any point. The switch must be installed in a flush electrical box with cover plate, location(s) as shown on the electrical drawings. All conduit and wiring from the control switch to the projection screen must be furnished and installed by the Contractor. [Ceiling recessed case must be [extruded aluminum] [or] [wood with metal lined motor compartment]]. [[Wall] [Ceiling] mounted case must be [aluminum] [or] [steel] [wood. Wood case must be finished in [plastic laminate] [light oak] [medium oak] [walnut] [cherry] [mahogany] [_____]]]. Screen must be UL listed. The size must be as shown in [paragraph PLACEMENT SCHEDULE] [the drawings] [_____]. Provide projection screens that meet the emissions requirements of CDPH SECTION 01350 (limit requirements for either office or classroom spaces regardless of space type).

[Provide certification of indoor air quality for projection screens.]

2.10 COLOR

Finish colors for required items must be as [specified in Section 09 06 00 SCHEDULES FOR FINISHES] [indicated].

PART 3 EXECUTION

3.1 PLACEMENT SCHEDULE

NOTE: Location and mounting height of visual display boards must be identified.

Size and type of visual display boards should be specified only once in the contract documents.

Additional information must be added for the display track system. Specify the length of the wall track, and type and number of presentation components required per room.

[Location and mounting height of visual display boards must be as shown on the drawings.] [Visual display boards must be provided as follows:

Room Name and Number	Board Type	Board Size	Wall Location	Mounting Height
[_____]	[_____]	[_____]	[_____]	[_____]

]

Mounting height is defined as distance from finished floor to top of the display board frame.

3.2 INSTALLATION

NOTE: Provide reinforcing at partitions to support visual display boards.

Do not install items that show visual evidence of biological growth. Perform installation and assembly in accordance with manufacturer's printed instructions. Use concealed fasteners. Visual display boards must be attached to the walls with suitable devices to anchor each unit. furnish and install trim items, accessories and miscellaneous items in total, including but not limited to hardware, grounds, clips, backing materials, adhesives, brackets, and anchorages incidental to or necessary for a sound, secure, complete and finished installation. Installation must not be initiated until completion of room painting and finishing operations. Visual display boards must be installed in locations and at mounting heights indicated. Visual display boards must be installed level and plumb, and if applicable doors must be aligned and hardware must be adjusted. Damaged units must be repaired or replaced as directed by the Contracting Officer.

3.3 CLEANING

Writing surfaces must be cleaned in accordance with manufacturer's

instructions.

-- End of Section --
