1 PURPOSE AND SCOPE

This document outlines Space Planning Criteria for Chapter 104: SCI/D Center. It applies to all clinical services provided at a SCI/D Center (Hub) for Acute Care patients, Long Term Care Residents and Outpatient services in all medical facilities at the Department of Veterans Affairs (VA). Pertinent Sections of this document have been implemented in the Space and Equipment Planning System (SEPS) so that planners working on SCI/D Center (Hub) new footprint or renovation projects can create baseline space plans based on this Standard.

In addition, this document outlines Space Planning Criteria for SCI/D Spokes at the Department of Veterans Affairs (VA). Pertinent Sections of this document have been implemented in the Space and Equipment Planning System (SEPS) so that planners working on SCI/D Spoke new footprint or renovation projects can create baseline space plans based on this Standard.

The following policy documents have been reviewed, referenced and incorporated as appropriate:

**OMB Memorandum M-12-12**: Promoting Efficient Spending to Support Agency Operations, May 11, 2012 (Section 3: Freeze the Footprint)

2 DEFINITIONS

**Activities of Daily Living (ADL)**: Training conducted by Occupational Therapists to help patients with living skills such as eating, dressing, grooming, transferring, etc. This training is designed to help the patient function as independently as they are able.

**Cystoscopy (CG)**: A radiology procedure that uses a Cystogram to examine the bladder.

**Kinesiotherapy**: The application of scientifically based exercise principles adapted to enhance the strength, endurance, and mobility of individuals with functional limitations or those requiring extended physical conditioning.

**Occupational Therapy**: A health profession that uses the structured activity of everyday activities in order to help people achieve their highest level of independence. Daily living skills include feeding, dressing, bathing, and grooming in order to improve arm flexibility and strength, neck control and posture, and perceptual and cognitive skills. A person may learn to use adaptive equipment to facilitate these tasks.

**Physical Therapy**: A health profession that uses structured activity for the preservation, enhancement, and/or restoration of movement and physical function that utilizes therapeutic exercise, massage, electrotherapy, assistive devices, patient education, and other therapeutic techniques.

**SCI/D System of Care**: An integrated service delivery network. SCI/D Centers (Hubs) provide comprehensive, lifelong primary and specialty care for Veterans with SCI/D as described in VHA Directive 1176.01. Each SCI/D Center has a delineated catchment area with designated
SCI/D Spoke facilities. SCI/D-educated primary care teams in SCI/D Spoke facilities integrated with SCI/D Centers is a practice unique to VA. Veterans can receive care for relatively uncomplicated health care issues closer to home in SCI/D Spokes. More complex problems are referred to the SCI/D Center.

Spinal Cord Injury / Disorders Center (SCI/D): A specialized medical facility designed to provide a full range of care for patients who have sustained a lesion of the spinal cord or cauda equina resulting in either paraplegia or tetraplegia. SCI/D Centers care is divided into three modalities: Acute Care, Outpatient Care and Long Term Care.

SCI/D Center Acute Care (SCI/D AC): An inpatient SCI/D component intended for short term patient care and staffed by a multidisciplinary team including medical, nursing, nutrition, social work, psychology, spiritual care as well as therapy services (in all its modalities).

SCI/D Center Acute Care Patient Care Unit (AC-PCU) Area: A 10-bed unit composed of single patient bedrooms, one Airborne Infection Isolation suite, and, if authorized, a double patient bedroom and all their support spaces. Space criteria in this document was developed for a range of between 1 and 100 Acute Care beds authorized.

SCI/D Center Acute Care Patient Care Unit (AC-PCU) Common Area: An Acute Care Functional Area directly supporting all the SCI/D Center Acute Care Patient Care Units (AC-PCUs).

SCI/D Center Long Term Care (SCI/D LTC): A resident SCI/D component intended for long term resident care and staffed by a multidisciplinary team including medical, nursing, nutrition, social work, psychology, spiritual care as well as therapy services (in all its modalities). Provision of the Long Term Care spaces is based on the Small House (formerly CLC) concept, refer to PG-18-9 Chapter 104.

SCI/D Center Long Term Care Home (LTC-H) Area: A 6-bed Home composed of single resident bedrooms, one Airborne Infection Isolation suite, and, if authorized, a double resident bedroom and all their support spaces, including a Neighborhood Center. Space criteria in this document was developed for a range of between 1 and 65 Long Term Care beds authorized. The minimum number of Long Term Care Homes (LTC-Hs) generated is two.

SCI/D Center Long Term Care Neighborhood Center Areas: A grouping of rooms and Functional Areas (FAs) which include support, staffing and therapy, in all its modalities, spaces in support to the Long Term Care Homes (LTC-Hs).

SCI/D Center Outpatient (SCI/D OP): An outpatient SCI/D component intended for provision of primary outpatient care for spinal cord injury patients and staffed by SCI primary care physicians, nurse practitioners, nurses, technicians and support personnel. Calculation of the number of OP Exam/Treatment Rooms is based on the number of Patient Uniques in the facility Registry. Space criteria in this document was developed for a range of between 38 and 1,762 Patient Uniques.

SCI/D Center Education Area: A functional area incorporating a Simulation Room aimed at facilitating training and educational activities for SCI/D staff.
SCI/D Center Research Area: A functional area incorporating a Research Laboratory to promote development of research-based SCI initiatives.

Therapy Area: Therapy areas are provided for all three SCI/D Center service levels: Acute Care (AC), Long Term Care (LTC) and Outpatient (OP) and include Recreational Therapy (RT), Physical Therapy (PT), Kinesiotherapy (KT), Occupational Therapy (OT), and Aquatic Therapy. Space planning criteria is developed so that in cases SCI/D Center Acute Care (AC) and SCI/D Center Outpatient are concurrently planned, the Acute Care (AC) Therapy spaces are sized to serve both Acute Care (AC) and Outpatient (OP) therapy patients; and, in cases Outpatient (OP) spaces are planned and no Acute Care (AC) is provided, the Outpatient (OP) therapy areas are sized based on the number of Outpatient Exam / Treatment Rooms.

Urodynamics: Testing that assesses how the bladder and urethra are performing their job of storing and releasing urine. Urodynamics will provide the physician with information needed to diagnose the cause and nature of a patient’s incontinence in order to prescribe most effective treatment option.

Space Planning / SEPS

Accessible: A site, building, facility, or portion thereof that complies with provisions outlined in the Architectural Barriers Act of 1968 (ABA).

Architectural Barriers Act (ABA): A set of standards developed to ensure that all buildings financed with federal funds are designed and constructed to be fully accessible to everyone. This law requires all construction, renovation, or leasing of sites, facilities, buildings, and other elements, financed with federal funds, to comply with the Architectural Barriers Act Accessibility Standards (ABAAAS). The ABAAAS replaces the Uniform Federal Accessibility Standards (UFAS).

Average Length of Encounter (ALoE): Averaged length of time, in minutes, a patient spends in an Exam / Treatment Room interacting with a provider and the clinical support team. It is accounted from room “set-up” to “clean-up” by staff. This metric is used to determine the number of annual patient / provider encounters that take place in an Exam / Treatment Room which, in turn, is used to calculate the number of Exam / Treatment Rooms needed in a facility based on projected annual workload. The ALoE is determined with VHA SME input during a PG-18-9 clinical chapter revision / update.

Average Length of Stay (ALoS): The average number of days a patient Veteran stays in an inpatient care unit. The ALoS is used to calculate the number of patient bedrooms for a specialty by dividing the site’s projected workload by the ALoS.

Building Gross (BG) Factor: A Factor applied to the sum of all the Departmental Gross Square Footage (DGSF) in a project to determine the Building Gross Square Footage. This factor accounts for square footage used by the building envelope, structural systems, horizontal and vertical circulation including main corridors, elevators, stairs and escalators, shafts, and mechanical spaces. The Department of Veterans Affairs has set this factor at 1.35 and included guidance in case of variance when developing a Program for Design (PFD) in SEPS.
Clinic Stop: Per these criteria, a clinic stop is the workload unit of measure for space planning. Clinic Stops are codified by VSSC, when applicable, they are referenced by number in the calculation of workload driven patient care spaces in this document.

Department Net to Gross (DNTG) Factor: A parameter, determined by the VA for each clinical and non-clinical department PG-18-9 space planning criteria chapter, used to convert the programmed Net Square Feet (NSF) area to the Department Gross Square Feet (DGSF) area.

Encounter: An interaction between a patient Veteran and a VA provider or providers in an Exam Room / Treatment Room / Consultation Room / Procedure Room, spaces where a patient Veteran received clinical care.

Full-Time Equivalent (FTE): A staffing parameter equal to the amount of time assigned to one full time employee. It may be composed of several part-time employees whose combined time commitment equals that of one full-time employee (i.e., 40 hours per week).

Functional Area (FA): The grouping of rooms and spaces based on their function within a clinical service or department.

Functional Area Criteria Statement (FACS): A verbalized mathematical / logical formulation assigned to a FA incorporating answers to Input Data Statements (IDSs) to determine the condition for providing the rooms / spaces listed in the FA in the baseline space program or Program for Design (PFD) for a project. Certain rooms / spaces may or may not have additional conditions.

Input Data Statement(s): A question or set of questions designed to elicit information about the healthcare project to generate a Program for Design (PFD) based on the parameters set forth in this set of documents. This information is processed through mathematical and logical operations in the VA Space and Equipment Planning System (SEPS).

JSN (Joint Schedule Number): A unique five alpha-numeric code assigned to each content item in the PG-18-5 Standard. JSNs are defined in DoD’s Military Standard 1691 and included in SEPS Content Table.

Net Square Feet / Net Square Meters (NSF/NSM): The area of a room or space derived from that within the interior surface of the bounding walls or boundaries.

Patient Unique: (or Unique Patient), A Veteran patient counted as a unique in each division from which they receive care. Patient Uniques are included in the Registry for a VA Medical Center.

Program for Design (PFD): A project specific itemized listing of the spaces, rooms, and square foot area required for the proper operation of a specific service / department, and the corresponding area for each. PFDs are generated by SEPS based on the PG-18-9 Standard.

PG-18-5: A Department of Veterans Affairs’ Equipment Guidelist Standard for planning, design, and construction of VA healthcare facilities; a Program Guide (PG) that lists assigned
room contents (medical equipment, furniture, and fixtures) to each room in PG-18-9. PG-18-5 follows PG-18-9’s chapter organization and nomenclature.

PG-18-9: A Department of Veterans Affairs’ Program Guide for the Space Planning Criteria Standard use to develop space planning guidance for the planning, design, and construction of VA healthcare facilities; a Program Guide (PG) that provides space planning guidance for VA Medical Centers (VAMCs) and Community Bases Outpatient Clinics (CBOCs). PG-18-9 is organized by chapters, as of September 2021 there are 56 clinical and non-clinical PG-18-9 chapters; they are implemented and deployed in SEPS so that space planners working on VA healthcare projects can develop baseline space programs.

PG-18-12: A Department of Veterans Affairs’ Design Guide Standard for planning, design and construction of VA healthcare facilities, a Program Guide (PG) that provides design guidance for VA Medical Centers (VAMCs) and Community Bases Outpatient Clinics (CBOCs). The narrative section details functional requirements and the Room Template section details the planning and design of key rooms in PG-18-9. Not all PG-18-9 chapters have a corresponding PG-18-12 Design Guide; one Design Guide can cover more than one PG-18-9 chapter.

Provider: An individual who examines, diagnoses, treats, prescribes medication, and manages the care of patients within his or her scope of practice as established by the governing body of a healthcare organization.

Room Area: The square footage required for a clinical or non-clinical function to take place in a room / space. It takes into account the floor area required by equipment (medical and non-medical), furniture, circulation, and appropriate function / code-mandated clearances. Room area is measured in Net Square Feet (NSF).

Room Code (RC): A unique five alpha-numeric code assigned to each room in the PG-18-9 Standard. Room Codes in PG-18-9 are unique to VA and are the basis for SEPS’s Space Table for VA projects.

Room Criteria Statement (RCS): A mathematical / logical formulation assigned to each room / space included in PG-18-9 incorporating answers to Input Data Statements (IDSs) to determine the provision of the room / space in the baseline space program or Program for Design (PFD) for a project.

Room Efficiency Factor: A factor that provides flexibility in the utilization of a room to account for patient delays, scheduling conflicts, and equipment maintenance. Common factors are in the 75% to 85% range. A room with 80% room efficiency provides a buffer to assume that this room would be available 20% of the time beyond the planned operational practices for this room. This factor may be adjusted based on the actual and/or anticipated operations and processes of the room/department at a particular facility.

SEPS: Acronym for Space and Equipment Planning System which produces equipment lists and Program for Design for a healthcare project based on specific information entered in response to Input Data Questions.
SEPS Importer: A style-based format developed to allow upload of RCSs and IDSs to SEPS to implement and operationalize space planning criteria in PG-18-9 in the SEPS digital tool. This format establishes the syntax used in the RCSs and allows the use of Shortcuts. Shortcuts allow developers of space planning criteria statements to simplify RCSs making full use of their logical and mathematical functionality. A shortcut can refer to an RCS, a room in any FA or a formula. Shortcuts are [bracketed] when used in FAs and RCSs and are listed along with their equivalences at the end of the Space Planning Criteria section.

Space Planning Concept Matrix (SPCM): A working document developed during the chapter update process. It lists all the rooms organized by Functional Area and establishes ratios between the directly and the indirectly workload driven rooms for the planning range defined in this document. The matrix is organized in ascending workload values in ranges reflecting existing facilities and potential future increase. Section 5 of this document Space Planning Criteria reflects the values in the SPCM.

Stop Code: A measure of workload including clinic stops forecasted by the Office of Policy and Planning (OPP) for all Strategic Planning Categories at Medical Center and Outpatient Clinic levels.

Telehealth: The use of technology, such as computers and mobile devices, to manage healthcare remotely. It includes a variety of health care services, including but not limited to online support groups, online health information and self-management tools, email and online communication with health care providers, remote monitoring of vital signs, video, or online doctor visits. Depending on the concept of operations for this space, it may be equipped as an exam room or as a consult room with video/camera capability.

Utilization Rate: A factor used in the calculation of a directly workload-driven room throughput. It represents, in a percent value, the room is idle based on the planning assumptions. For example, if a directly workload-driven room is available for use 8 hours a day, the Utilization Rate represents the assumed time it will be used, an 85% utilization rate indicates, for planning purposes, the room will be used 6.8 hours a day. An additional directly workload-driven room will be provided in the calculation once the previous room has reached 100% utilization. The utilization Rate is embedded in the Room Throughput value calculated in Section 3 of this document.

VA Room Family (VA RF): An organizational system of rooms / spaces grouped by function, a ‘Room Family’. There are two “Orders” in the VA RF: Patient Care and Patient Care Support; Patient Care features four sub-orders: Clinical, Inpatient, Outpatient and Residential Clinical. There are also four sub-orders in the Patient Care Support order: Building Support, Clinical Support, Staff Support and Veteran Support. Each room in a Family has a unique Room Code and NSF assigned based on its Room Contents and function which correspond to the specific use of the room. The same RC can be assigned to different Room Names with the same function in this document and can be assigned an NSF that varies based on the PG-18-5 Room Contents assigned to the room.

VA Technical Information Library (TIL): A resource website maintained by the Facilities Standards Service (FSS) Office of Construction and Facilities Management (CFM) containing...
a broad range of technical publications related to the planning, design, leasing, and construction of VA facilities. VA-TIL can be accessed at: https://www.cfm.va.gov/TIL/

Workload: Workload is the anticipated number of procedures, clinic stops, clinic encounters etc. that is processed through a department/service area. The total workload applied to departmental operational assumptions will determine overall room requirements by modality.

Workstation: Area outfitted with equipment and furnishings, typically allocated 56 NSF each. Managers and other staff with no direct reports as well as part-time, seasonal, and job-sharing staff may qualify for a workstation. Such environments are particularly conducive to team-oriented office groupings. These environments work best when they have access to conference and small group meeting spaces.

3 OPERATING RATIONALE AND BASIS OF CRITERIA

A. Space planning criteria have been developed based on research of the clinical and non-clinical activities involved in various functional areas of VA SCI/D Centers (Hubs) and SCI Spokes. These criteria are predicated on established and/or anticipated best practice standards as well as applicable policy requirements for VA SCI/D Centers. These criteria are subject to modification and adjustment relative to developments in state-of-the-art equipment, medical practice, and subsequent planning and design.

Space Planning Criteria for the SCI/D Center (Hub) clinical and support functions are organized in four distinct Sections in this document:

1. SCI/D Center Acute Care (AC),
2. SCI/D Center Long Term Care (LTC),
3. SCI/D Center Outpatient (OP),
4. SCI/D Center, and
5. SCI Spoke (Space Planning Criteria for the SCI/D Spokes clinical and support functions are all consolidated in this Section)

Each Component is organized in Functional Areas (FAs) as follows:

1. SCI/D Center Acute Care (AC):
   a. FA1: SCI/D Acute Care Patient Care Unit (AC-PCU) Calculation,
   b. FA2: SCI/D Center Acute (AC) Reception Area,
   c. FA3: SCI/D Center Acute Patient Care Unit (AC-PCU) Patient Area,
   d. FA4: SCI/D Center Acute Patient Care Unit (AC-PCU) Support Area,
   e. FA5: SCI/D Center Acute Patient Care Unit (AC-PCU) Common Area,
   f. FA6: SCI/D Center Acute (AC) Staff and Administrative Area,
   g. FA7: SCI/D Center Acute / Outpatient Physical Therapy (AC/OP-PT) Area,
   h. FA8: SCI/D Center Acute / Outpatient Kinesiotherapy (AC/OP-KT) Area,
   i. FA9: SCI/D Center Acute / Outpatient Occupational Therapy (AC/OP-OT) Area,
   j. FA10: SCI/D Center Acute / Outpatient Activities of Daily Living (AC/OP-ADL) Area,
   k. FA11: SCI/D Center Acute / Outpatient (AC/OP) Therapy Support Area, and
l. FA12: SCI/D Center Home Environment (AC-HE) Area.

2. SCI/D Center Long Term Care (LTC),
   a. FA13: SCI/D Center Long Term Care (LTC) Resident Home Calculation,
   b. FA14: SCI/D Center Long Term Care Home (LTC-H) Reception Area,
   c. FA15: SCI/D Center Long Term Care Home (LTC-H) Resident Area,
   d. FA16: SCI/D Center Long Term Care Home (LTC-H) Support Area,
   e. FA17: SCI/D Center Long Term Care (LTC) Staff and Administrative Area,
   f. FA18: SCI/D Center Long Term Care Neighborhood Center (LTC-NC) Resident Area,
   g. FA19: SCI/D Center Long Term Care Neighborhood Center (LTC-NC) Support Area,
   h. FA20: SCI/D Center Long Term Care Neighborhood Center (LTC-NC) Staff and Administrative Area,
   i. FA21: SCI/D Center Long Term Care Neighborhood Center Physical Therapy (LTC-NC-PT) Area,
   j. FA22: SCI/D Center Long Term Care Neighborhood Center Kinesiotherapy (LTC-NC-KT) Area,
   k. FA23: SCI/D Center Long Term Care Neighborhood Center Occupational Therapy (LTC-NC-OT) Area,
   l. FA24: SCI/D Center Long Term Care Neighborhood Center Activities of Daily Living (LTC-NC-ADL) Area, and
   m. FA25: SCI/D Center Long Term Care Neighborhood Center (LTC-NC) Therapy Support Area.

3. SCI/D Center Outpatient (OP)
   a. FA26: SCI/D Center Outpatient (OP) Reception Area,
   b. FA27: SCI/D Center Outpatient (OP) Patient Area,
   c. FA28: SCI/D Center Outpatient (OP) Support Area,
   d. FA29: SCI/D Center Outpatient (OP) Staff and Administrative Area,
   e. FA30: SCI/D Center Outpatient Home Care (OP-HC) Area,
   f. FA31: SCI/D Center Outpatient Physical Therapy (OP-PT) Area,
   g. FA32: SCI/D Center Outpatient Kinesiotherapy (OP-KT) Area,
   h. FA33: SCI/D Center Outpatient Occupational Therapy (OP-OT) Area,
   i. FA34: SCI/D Center Outpatient Activities of Daily Living (OP-ADL) Area,
   j. FA35: SCI/D Center Outpatient (OP) Therapy Support Area,

4. SCI/D Center
   a. FA36: SCI/D Center Reception Area,
   b. FA37: SCI/D Center Patient / Resident Area,
   c. FA38: SCI/D Center Support Area,
   d. FA39: SCI/D Center Staff and Administrative Area,
   e. FA40: SCI/D Center Aquatic Therapy Area,
   f. FA41: SCI/D Center Education Area,
   g. FA42: SCI/D Center Research Area,
5. SCI Spoke
   a. FA43: SCI Spoke

Each Room / space in a Functional Area (FA) based on its intended function is assigned a:

1. Room Name (RN),
2. Unique Room Code (RC),
3. Room Area expressed in Net Square Feet (NSF) and Net Square Meters (NSM), its corresponding “soft” metric equivalent,
4. Unique Room Criteria Statement (RCS), and
5. Room Comment if available.

These five elements for each room as well as its corresponding Input Data Statements (IDSs) are implemented in the Space and Equipment Planning System (SEPS). Planners working on VA SCI/D projects develop baseline space programs or Programs for Design (PFDs) for SCI/D Center projects by providing answers to the Input Data Statements (IDSs).

B. Determination of the number of Acute Care Patient Care Units (AC PCUs) and Long Term Care Resident Homes (LTC-Hs) for a project is based on the number of AC Patient Beds and LTC Resident Beds authorized for each site (facility). Determination of the number of Outpatient Exam / Treatment Rooms for a project is based on the number of Patient Uniques in the Registry for a facility; this number is then translated into workload using the VA national average of 9.79 annual outpatient visits for SCI patients. The number and size in Net Square Feet (NSF) of each space in the Reception, Support and Therapy Functional Areas, the indirectly workload-driven rooms, is subsequently determined via ratios and metrics from the resulting number of directly workload-driven AC Patient Care Units, LTC Homes and OP Exam/Treatment Rooms. Staff and administrative as well as Education spaces are determined by information entered in response to Mission and Staffing Input Data Statements (IDSs).

C. The provision / calculation of the SCI/D AC Patient Bedrooms, SCI/D LTC Resident Bedrooms and Outpatient Exam / Treatment Rooms, the directly workload-driven rooms, is based on answers to the workload Input Data Statements via mathematical or logical formulae. The calculation of the indirectly workload-driven rooms, most of them in the Reception, Support and Therapy Functional Areas (FAs) is based on ratios to the directly workload-driven rooms. The ratios are provided in three “bands” (lower, intermediate & upper) for SCI/D Center Acute Care (SC) and in two “bands”: (lower & upper) for SCI/D Center Long Term Care (LTC) and SCI/D Center Outpatient (OP). As there are several rooms that are provided via answers to Staffing or Mission Input Data Statements (IDSs), planner shall correlate these answers to the workload levels provided for the project.

D. Provision / calculation of the SCI Spoke Clinic Exam/ Treatment Rooms is based on the number of Unique SCI Patients in the facility Registry. All the spaces needed in a SCI Spoke are included in one Functional Area. These spaces are provided in VAMCs where
an SCI/D Center is not provided as a way to reach out the SCI patient ambulatory population in the facility area of influence.

E. The Room Codes included in this chapter are included in the VA Room Family. Per this effort, a space may have various Room Codes assigned to the same Room Name, based on its Room Content (PG-18-5) assignment which corresponds to its intended function level, yielding a different room square footage (NSF).

F. The space planning and design Program Guides: PG-18-9, PG-18-5, and PG-18-12 are available at the Department of Veterans Affairs Office of Construction and Facilities Management (CFM) Technical Information Library (TIL) website.

G. Workload Projections or workload level authorized for SCI/D services for a specific VA medical center or hospital project are provided by the VHA Support Service Center (VSSC) or VA Central Office (VACO). The workload projections are generated by methodology based upon the expected veteran population in the respective market / service area. Healthcare planners working on VA Medical Center (VAMC) or hospital projects will utilize this projected workload as well as specific Mission and Staffing information to generate the Baseline Space Program or Program for Design (PFD) for the project. The Input Data Statements (IDSs) eliciting this information are included in Section 4 for SCI/D Center Acute Care (AC), Section 6 for SCI/D Center Long Term Care (LTC), Section 8 for SCI/D Center Outpatient (OP) and Section 10 for SCI/D Center. These IDSs are also implemented in the Space and Equipment Planning System (SEPS), accessible through the MAX.gov website, so that planners working in VA SCI/D projects can develop baseline Programs for Design by answering the IDSs.

H. The Functional Area Criteria Statements (FACSs) define the conditions applied to all rooms in the Functional Area in addition to specific conditions that may be listed for certain rooms in each Room Criteria Statement (RCS). Both FACSs & RCSs use shortcuts to link answers in the Input Data Statements (IDSs), certain rooms, or to perform certain intermediate calculations applied in the generation of the Program for Design (PFD) for a project.

I. The Therapy Areas in Functional Areas 7 to 11 shall be provided if a project incorporates the Acute Care (AC) component or a combined Acute Care (AC) and Outpatient (OP) components. The Therapy Areas in Functional Areas 31 to 35 shall be provided if a project incorporates an Outpatient (OP) component only. This arrangement is reflected in baseline Program for Design (PFD) created in SEPS once those conditions are met.

J. Refer to PG-18-5: SCI/D Center Equipment Guidelist for the Room Content assignment for each room included in this document.

K. Refer to PG-18-12: SCI/D Center Design Guide for additional planning and design information and for Room Guideplates for selected rooms in this document.
L. The following Sections in this document have been implemented and tested in the Space and Equipment Planning System (SEPS) and are available for developing projects for SCI/D Center Acute Care (AC), SCI/D Center Long Term Care (LTC) and SCI/D Center Outpatient (OP) components:

1. Section 4: Input Data Statements: SCI/D Center Acute Care (AC),
2. Section 5: Space Planning Criteria: SCI/D Center Acute Care (AC),
3. Section 6: Input Data Statements: SCI/D Center Long Term Care (LTC),
4. Section 7: Space Planning Criteria: SCI/D Center Long Term Care (LTC),
5. Section 8: Input Data Statements: SCI/D Center Outpatient (OP),
6. Section 9: Space Planning Criteria: SCI/D Center Outpatient (OP),
7. Section 10: Input Data Statements: SCI/D Center,
9. Section 12: Input Data Statements: SCI Spoke, and

M. These criteria are subject to modification relative to development in the equipment, medical practice, vendor requirements, and subsequent planning and design. The selection of the size and type of SCI/D equipment is determined by VACO upon Veterans Health Administration (VHA) anticipated medical needs.

N. Calculation of the SCI/D Center OP directly workload-driven rooms is based on the following parameters:

1. Average Number of Annual Encounters for each SCI/D Patient Unique: 9.79
2. Operating days per year: 250
3. Hours of Operation per day: 8
4. Average length of encounter (ALoE) (in minutes): 80
5. Room Efficiency Factor: 75%
6. Minimum workload required to generate one Exam / Treatment Room: 25% of Annual Encounters per Room
7. Calculation of the SCI/D Center OP Exam/Treatment Room annual capacity:

\[(\text{Operating days per year} \times \text{Hours of operation per day}) \div (\text{ALoE} \div 60) = \text{Number of annual encounters}\]

Example:

\[(250 \times 8) \div (80 \div 60) = 1,500\]

The Exam / Treatment Room maximum annual capacity is 1,500 encounters per year, assuming 100% utilization.

SCI/D Center OP Exam/Treatment Room Annual Capacity:

1,500 x 75% = 1,125 annual encounters

1,500 x 25% = 375 annual encounters, minimum workload to generate an additional room
O. Calculation of the number of SCI/D Center OP Exam/Treatment Rooms for a project:

1. Calculation of projected number of SCI/D Center OP Annual Encounters:
   Number of SCI Patient Uniques in Registry x 9.79

2. Calculation of the number of SCI/C Center OP Exam/Treatment Rooms:
   SCI Patient Uniques projected annual encounters ÷ Exam / Treatment Room Annual Capacity = Number of Rooms

Example:
850 Patient Uniques x 9.79 = 8,322 annual encounters
8,322 annual encounters ÷ 1,125 = 7.40 SCI/D OP Exam/Treatment Rooms
7 x 1,125 = 7,875 annual encounters
8,322 – 7,875 = 447
447 is greater than 375 hence provide an additional room (see Table 1 Col 5)
8 SCI/D OP Exam/Treatment Rooms will be provided.

The number of SCI/D OP annual encounters per room will be used as a criteria parameter to calculate the number of SCI/D OP Exam / Treatment Rooms in the Space Criteria section of this document.

P. Calculation of the number of Spoke Exam / Treatment Rooms for a project

1. Number of Spoke Exam / Treatment Rooms is based on set annual Patient Unique in facility Registry throughput value for each Exam / Treatment Room. This value is set at 114 with a minimum of two Exam / Treatment Rooms provided for each SCI Spoke.

Q. The Net-to-Department Gross (NTDG) factor is used to calculate the Departmental Gross Square Feet (DGSF) based on the summation of the generated net square footage for every room based on calculation of the answers to the Input Data Statements (IDSs) in the Room Criteria Statements (RCSs) mathematical and logical formulations. The NTDG factor for SCI/D Center is 1.70. The Building Gross Square Feet (BGSF) is calculated by multiplying the summation of the DGSFs in all the Departments in a project multiplied by the BGSF Factor. The Department of Veterans Affairs has set the BGSF Factor at 1.35.
4 INPUT DATA STATEMENTS (IDS): SCI/D CENTER ACUTE CARE (AC)

A. Is SCI/D Center Acute Care (AC) authorized? (M)
   1. Is an AC Double Patient Bedroom for each SCI/D Acute Care Patient Care Unit (AC-PCU) authorized? (M)
   2. Is SCI/D Acute Care (AC)/Outpatient (OP) Physical Therapy (PT) authorized? (M)
      a. Is an SCI/D Acute Care (AC)/Outpatient (OP) Physical Therapy (PT) Full Body Immersion Tank authorized? (M)
      b. Is an SCI/D Acute Care (AC)/Outpatient (OP) Physical Therapy (PT) Arm, Hip and Leg Whirlpool authorized? (M)
      c. Is an SCI/D Acute Care (AC)/Outpatient (OP) Physical Therapy (PT) Exoskeleton Training Room authorized? (M)
      d. How many SCI/D Acute Care (AC)/Outpatient (OP) Physical Therapist FTE positions are authorized? (S) (Values: 1 to 25)
      e. How many SCI/D Acute Care (AC)/Outpatient (OP) Physical Therapy Student FTE positions are authorized? (S) (Values: 1 to 13)
   3. Is SCI/D Acute Care (AC)/Outpatient (OP) Kinesiotherapy (KT) authorized? (M)
      a. How many SCI/D Acute Care (AC)/Outpatient (OP) Kinesiotherapist FTE positions are authorized? (S) (Values: 1 to 11)
   4. Is SCI/D Acute Care (AC)/Outpatient (OP) Occupational Therapy (OT) authorized? (M)
      a. How many SCI/D Acute Care (AC)/Outpatient (OP) Occupational Therapist FTE positions are authorized? (S) (Values: 1 to 17)
      b. Is an SCI/D Acute Care (AC) Occupational Therapy (OT) Driver Training Room authorized? (M)
   5. Is SCI/D Center Acute Care (AC)/Outpatient (OP) Activities of Daily Living (ADL) authorized? (M)
      a. How many SCI/D Acute Care (AC)/Outpatient (OP) Activities of Daily Living Therapist FTE positions are authorized? (S) (Values: 1 to 8)
   6. Is an SCI/D Acute Care (AC) Residency Program authorized? (M)
   7. How many SCI/D Acute Care (AC) Patient Beds are authorized? (W) (Values: 1 to 100)
   8. How many SCI/D Acute Care (AC) Provider FTE positions are authorized? (S) (Values: 1 to 25)
   9. How many SCI/D Acute Care (AC) Psychologist FTE positions are authorized? (S) (Values: 1 to 17)
  10. How many SCI/D Acute Care (AC) Social Worker FTE positions are authorized? (S) (Values: 1 to 17)
  11. How many SCI/D Acute Care (AC) Dietitian FTE positions are authorized? (S) (Values: 1 to 13)
  12. How many SCI/D Acute Care (AC) Wellness Coordinator FTE positions are authorized? (S) (Values: 1 to 10)
5 SPACE PLANNING CRITERIA: SCI/D CENTER ACUTE CARE (AC)

A. FA1: SCI/D CENTER ACUTE CARE PATIENT CARE UNIT (AC-PCU) CALCULATION

Rooms in this Functional Area shall be provided if SCI/D Center Acute Care (AC) is authorized, additional conditions are included for every room as needed.

FA Condition: [Acute Care (AC) is authorized]

1. SCI Number of

Acute Care Patient Care Units (AC-PCUs), Clncl Sprt (SC145) .......... 0 NSF (0.0 NSM)
   a. Provide one if [AC Patient Beds authorized] is between 1 and 10
   b. Provide two if [AC Patient Beds authorized] is between 11 and 20
   c. Provide three if [AC Patient Beds authorized] is between 21 and 30
   d. Provide four if [AC Patient Beds authorized] is between 31 and 40
   e. Provide five if [AC Patient Beds authorized] is between 41 and 50
   f. Provide six if [AC Patient Beds authorized] is between 51 and 60
   g. Provide seven if [AC Patient Beds authorized] is between 61 and 70
   h. Provide eight if [AC Patient Beds authorized] is between 71 and 80
   i. Provide nine if [AC Patient Beds authorized] is between 81 and 90
   j. Provide ten if [AC Patient Beds authorized] is between 91 and 100

14 PLANNING AND DESIGN CONSIDERATIONS

A. General

1. This chapter allocates SCI/D Acute Care (AC), SCI/D Long Term Care (LTC), SCI/D Outpatient (OP) and SCI/D Center space separately in order to accommodate facilities that may need to program these services individually, for example in case of renovation projects. In case these services are provided concurrently in a project, project planners / designers shall merge Reception, Support and Therapy areas –as possible- with concurrence of the local facility officials.

2. The Program for Design (PFD) Report produced by SEPS based on these criteria is intended to be a baseline standardized space program in terms of the number of spaces provided for the clinic as well as their net square footage (NSF). A Planner may make changes to PFD values for a project, provided reasoning is entered in the Comment field of each room affected for approval and approval is granted by reviewing government official; same principle applies to the Project Room Contents (PRC).

3. Medical Diagnostic Equipment shall comply with the US Access Board 36 CFR Part 1195 Standards for Accessible Medical Diagnostic Equipment.

4. Telecommunications system, and nurse call emergency, wired, wireless or a combination with auditive, visual or vibration cues shall be provided in all patient and therapy areas. Refer to VA 104 PG-18-12.

5. Wall and corner guards, handrails, chair rails wall bases; door kickplates, door frame guards, door edge protectors, etc., shall be provided in all areas of high traffic / use. Refer to VA 104 PG-18-12.
6. Regardless of the total number of Outpatient Exam / Treatment Rooms in the facility, Medical Gases shall be provided to one Outpatient Exam / Treatment Room only. Appropriate quantity of M0750 Flowmeter, Air, connect w/50 PSI Supply; M0755 Flowmeter, Oxygen, Low Flow, and M0765 Regulator, Vacuum shall be accounted for in the Project Room Content (PRC) report. Refer to VA 104 PG-18-12.

7. Refer to Department of Veterans Affairs (VA) Office of Construction and Facilities Management Technical Information Library (www.cfm.va.gov/til/) for additional technical criteria.

B. SCI/D Center Acute Care Patient Care Unit (AC-PCU) Patient Area

1. Separation of patient, visitor, and support traffic should be considered to the greatest extent possible and should be considered in the placement of the patient bedroom areas and in connections to support services.

2. Provide 100 percent accessibility in all patient areas both indoors and out.

3. Standardization of Bedrooms and modular design should be considered to allow flexibility to adapt to new technologies and respond to changes in patient volumes.

4. Design should accommodate patient privacy and confidentiality in all areas, and in reception and patient care areas in particular. This includes visual and auditory considerations.

5. Showers in all Patient Toilet/Showers, ADL and HE Bathrooms shall be equipped with a handheld shower and a 6’ long flexible hose. Refer to VA 104 PG-18-12.

6. Environmental Control Units (ECUs) shall be provided in all patient bedrooms. ECUs are devices that allow people with mobility impairments to operate electronic devices, including televisions, computers, lights, appliances, etc. Refer to VA 104 PG-18-12.

7. Where possible, the department should be configured to limit the mix of patient and service functions, and to maintain clear separation of clean and dirty functions to avoid cross contamination.

8. Corridors should be designed to a minimum of 8 feet clear width to accommodate passage of equipment or beds and two stretchers and/or wheelchairs.

9. Administration and support areas should be located and designed to maximize staff and space efficiency, and reduce staff travel distances.

10. Plan to maximize, to the degree possible, staff efficiencies by arranging patient areas consistent with staffing patterns.

11. Provide adequate space for supplies and equipment to promote work safety and care delivery (e.g., ceiling lifts).

12. The integration of natural light in all areas of the patient unit should be considered.

13. Accommodations for family/caregiver should be considered.
14. Refer to PG-18-12 Design Guide for SCI/D Center for a detailed discussion of functional and design considerations for SCI/D Center (Hub) Acute Care (AC) Patient Care Units.

C. SCI/D Center Acute Care / Outpatient (AC/OP) Therapy Areas
   1. Provide 100 percent accessibility in all patient areas both indoors and out.
   2. For efficiency in programming and planning combine and co-locate waiting, reception and restroom functions for outpatient units if provided.
   3. The Therapy Area should be located near the main entrance and in close adjacency to the Patient Care Units. This is to decrease travel distance for outpatients coming in for therapy and decrease travel time for inpatients coming from the Patient Care Unit.
   4. Plan to maximize, to the degree possible, staff efficiencies by arranging patient care units consistent with staffing patterns.
   5. An outdoor therapy courtyard shall be considered with varying grades and types of surfaces.
   6. The co-location of services for equipment, equipment repair, therapeutic pools, should be considered.
   7. Refer to PG-18-12 Design Guide for SCI/D Center for a detailed discussion of functional and design considerations for SCI/D Center (Hub) Acute Care (AC) Therapy Areas.
   8. Location of telecommunication outlets shall be provided based location of medical and IT equipment and will depend on final room layout for each project.

D. SCI/D Center Long Term Care Home (LTC-H) Resident Area
   1. A residential care environment provides living, treatment and support space in a residential, home-like setting for qualified veterans.
   2. Provide 100 percent accessibility in all resident areas both indoors and out.
   3. SCI/D Long Term Care has adopted a resident “small house” concept consisting of smaller grouping of resident rooms co-located with living, dining and kitchen areas.
   4. Standardization of Resident rooms and modular design should be considered to allow flexibility to adapt to new technologies and respond to changes in resident volumes.
   5. Showers in all Patient Toilet/Showers, ADL Bathrooms shall be equipped with a handheld shower and a 6’ long flexible hose. Refer to VA 104 PG-18-12.
   6. Environmental Control Units (ECUs) shall be provided in all patient bedrooms. ECUs are devices that allow people with mobility impairments to operate electronic devices, including televisions, computers, lights, appliances, etc. Refer to VA 104 PG-18-12.
7. Design should accommodate resident privacy and confidentiality in all areas, and in reception and resident care areas. This includes visual and auditory considerations.

8. Where possible, the department should be configured to limit the mix of resident and service functions, and to maintain clear separation of clean and dirty functions to avoid cross contamination.

9. Corridors should be designed to a minimum of 8 feet clear width to accommodate passage of equipment or beds and two stretchers and/or wheelchairs.

10. Administration and support areas should be located and designed to maximize staff and space efficiency, and reduce staff travel distances.

11. A home look and feel design should be considered.

12. The integration of natural light in all areas of the resident unit should be considered.

13. Accommodations for family/caregiver should be considered.

14. Plan to maximize, to the degree possible, staff efficiencies by arranging resident units consistent with staffing patterns.

15. Provide adequate space for supplies and equipment to promote work safety and care delivery (e.g., ceiling lifts).

16. The urban feeling and design using covered outdoor spaces should be considered to accommodate activities for residents and visitors. Integration of green spaces into the design should be considered.

17. Refer to PG-18-12 Design Guide for SCI/D Center for a detailed discussion of functional and design considerations for SCI/D Center (Hub) Long Term Care (LTC).

E. SCI/D Center Long Term Care (LTC) Neighborhood Center

1. Provide 100 percent accessibility in all resident areas both indoors and out.

2. The Neighborhood Center should be designed to provide a common area where Residents can associate in small groups.

3. The Neighborhood Center encourages resident interaction and should have a feel of a living space in a home, a space for, a kitchenette for meals, a laundry area, integrated technology and computer stations and nursing documentation and medications.

4. The Neighborhood involves co-location of support services between or amongst houses.

5. The urban feeling and design using covered outdoor spaces should be considered to accommodate activities for residents and visitors.

6. A home look and feel, spatial organization and way-finding design should be considered.
7. Plan to maximize, to the degree possible, staff efficiencies by arranging resident units consistent with staffing patterns.

8. Provide adequate space for supplies and equipment to promote work safety and care delivery (e.g., ceiling lifts).

9. The integration of natural light in all areas of the resident unit should be considered.

10. Refer to PG-18-12 Design Guide for SCI/D Center for a detailed discussion of functional and design considerations for SCI/D Center (Hub) Long Term Care (LTC) Neighborhood Center.

F. SCI/D Center Outpatient (OP)

1. Locate Outpatient Care entrance in a centralized location with adequate drive-off area and provide 100 percent accessibility in all patient areas.

2. Provide adequate percentage required for accessible parking spaces.

3. Patient check-in should be located adjacent to the waiting area while maintaining confidentiality wheelchair accessible height. Use of furniture and space to allow for wheelchairs should be considered.

4. Locate the Patient Education Kiosk/Alcove adjacent to Waiting. This area shall be provided with a computer and printer. Patient will complete self-assessment and health surveys, access health-related information, and view media specifically direct to their specific health concerns and treatments. Patient confidentiality should be maintained.

G. SCI/D Center Outpatient (OP) Therapy Areas

1. Provide 100 percent accessibility in all resident areas both indoors and out.

2. For efficiency in programming and planning combine and co-locate waiting, reception and restroom functions for outpatient units if provided.

3. The Therapy Area should be located near the main entrance and in close adjacency to the Patient Care Units (if co-located with Acute Care). This is to decrease travel distance for outpatients coming in for therapy and decrease travel time for inpatients (if co-located) coming from the Patient Care Unit.

4. Therapy spaces can be combined, maintain the total count of therapy stations as they are calculated based on the number of Patient Uniques in the facility Registry.

5. Provide adequate space for supplies and equipment to promote work safety and care delivery (e.g., ceiling lifts).

6. An outdoor therapy courtyard shall be considered with varying grades and types of surfaces.

7. The co-location of services for equipment, equipment repair, therapeutic pools, should be considered.

9. Location of telecommunication outlets shall be provided based on location of medical and IT equipment and will depend on final room layout for each project.

H. SCI/D Center

1. Patient accessible corridors should be a minimum of 8’-0” wide and staff accessible on corridors should be a minimum of 6’-0”. Internal suite passages and main aisles should be a minimum of 5’-0” wide to accommodate handicap accessibility standards.

I. SCI/D Center Outdoor Areas

1. Refer to PG-18-12 Design Guide for SCI/D Center for a detailed discussion of functional and design considerations for SCI/D Center (Hub) Outdoor areas.
